TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Northgate Env. Management, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

NO COVERAGE

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

APPENDIX J

PHASE I ESA QUESTIONNAIRE

Phase I Environmental Site Assessment Questionnaire

(User Provided Information Questionnaire)

Date: December 1, 2023

Your Name: Jim Soutter

Your Title: SVP, Engineering

Site Name: 10950 Washington

Site Location: 10950 Washington, Culver City, CA

Relationship to Site: ☒ **Owner** ☐ **Occupant** ☐ **Purchaser** ☐ **Other (please explain)**

Length of Time Associated with Site: 8 years

Please review and complete this questionnaire which will assist Northgate in completing our site assessment. If sufficient space in not provided, please compete your response on a separate sheet of paper and attach it to this questionnaire.

1. Are you aware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state or local law?

   ☐ Yes ☒ No ☐ Unknown ☐ N/A

   If Yes, please explain:_____

   _____

92 Argonaut, Suite 100, Aliso Viejo, California tel 949.716.0050 fax 949.716.0055
www.ngem.com

2. Are you aware of any activity or land use limitations, such as engineering controls (for contaminant control), land use restrictions or institutional controls, that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

_____

3. Do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

_____

4. Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

a) Do you know the past uses of the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

_____

b) Do you know of specific chemicals that are present or once were present at the Site?

☒ Yes ☐ No ☐ Unknown ☐ N/A

If Yes, please explain: During our ownership just small quantities of water treatment chemicals for the cooling tower.

_____

c) Do you know of chemical spills that have taken place at the Site?

☐ Yes ☐ No ☒ Unknown ☐ N/A

If Yes, please explain:_____

_____

d) Do you know of any environmental cleanups that have taken place at the Site?

☐ Yes ☐ No ☒ Unknown ☐ N/A

If Yes, please explain:_____

_____

e) Do you know if any fill material has been imported to the Site?

☐ Yes ☐ No ☒ Unknown ☐ N/A

If Yes, please explain:_____

_____

5. Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain:_____

_____

6. Do you know of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain:_____

_____

7. Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain:_____

_____

8. Based on your knowledge and experience related to the Site are there any obvious indicators that point to the presence or likely presence of contamination at the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain:_____

_____

9. Does the Site's purchase price reasonably reflect the fair market value of the property?

☒ Yes ☐ No ☐ Unknown ☐ N/A

If No, do you know the reason for lower purchase price? Is it possible that the lower purchase price is because of contamination known or believed to be present at the Site?

☐ Yes ☐ No ☐ Unknown ☐ N/A

If Yes, please explain:_____

_____

10. Have any of the following documents been prepared for the Site and, if so, can copies be provided to Northgate:

- Environmental site assessment reports ☐ Yes ☐ No ☒ Copies available
- Environmental compliance audit reports ☐ Yes ☒ No ☐ Copies available
- Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, National Pollutant Discharge Elimination System permits, underground injection permits) ☐ Yes ☒ No ☐ Copies available
- Registrations for underground storage tanks (USTs) and/or above ground storage tanks (ASTs) ☐ Yes ☒ No ☐ Copies available
- Registrations for underground injection systems ☐ Yes ☒ No ☐ Copies available

- Material safety data sheets ☐ Yes ☐ No ☒ Copies available
- Community right-to-know plan ☐ Yes ☒ No ☐ Copies available
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc. ☐ Yes ☒ No ☐ Copies available
- Reports regarding hydrogeologic conditions on the Site or in the surrounding area
  ☐ Yes ☒ No ☐ Copies available
- Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the Site or relating to environmental liens encumbering the Site ☐ Yes ☒ No ☐ Copies available
- Hazardous waste generator notices or reports ☐ Yes ☒ No ☐ Copies available
- Risk assessments ☐ Yes ☒ No ☐ Copies available
- Recorded Activity and Use Limitations (e.g. deed restriction, asphalt cap)
  ☐ Yes ☒ No ☐ Copies available

If you know of specific chemicals or other hazardous materials (e.g., PCB associated with transformers, batteries, etc.) that are present or were once present at the property, how were they used, stored, and disposed?

No

Do you know of aboveground or underground storage tanks on the property? If yes, what did they contain?

No

Do you have any knowledge or experience with nearby/adjacent properties? If yes, do you have knowledge of chemicals, releases, or cleanups on these properties?

No

How long have you owned, operated, leased, or been familiar the present and past uses of the property?

8 years

Northgate Environmental appreciates your assistance on this project.

APPENDIX K

ENVIRONMENTAL PROFESSIONAL QUALIFICATIONS

DERRICK S. WILLIS
PRINCIPAL II

Mr. Willis has over 24 years' experience serving both public sector and private clients in California and Canada on a wide variety of environmental projects. For the last several years, Mr. Willis' focus has been on formulating and facilitating closure and development strategies for large, complex, high profile, environmental projects for aerospace, industrial, and real estate development firms. Mr. Willis has extensive experience with due diligence/property transfer and development issues in a wide variety of industrial and regulatory settings. He is familiar with the industrial processes that generate environmental wastes, the fate and transport of chemicals in the environment, the potential adverse effects of these substances on human and ecological receptors, compliance challenges faced by business operators, the performance of remedial technologies, and how these issues play into site acquisition, development, and divestiture.

REPRESENTATIVE EXPERIENCE

Environmental Site Assessments

- ***RREEF, Multiple Sites, Southern California —*** Mr. Willis serves as client director for RREEF on multiple projects including acquisition studies (which include mold, asbestos and indoor air quality surveys), tenant audit programs, soil remediation, groundwater investigation and remediation, third party oversight, agency negotiation, and mold and asbestos abatement programs.
- ***Watson Land Company, Multiple Sites, Southern California —*** Mr. Willis has directed over 40 acquisition-related due diligence investigations for Watson Land Company (Watson). Scope of work has included Phase I ESAs, soil and groundwater investigations, risk evaluations, agency negotiation, and aiding Watson in evaluating and quantifying the potential risk associated with recognized environmental concerns.
- ***Various Clients, Various Locations, Southern California —*** Project manager for more than 200 Phase I environmental assessments (ESAs) for industrial facilities including aerospace, furniture and paper manufacturing factories; utility companies, vehicle and equipment maintenance facilities; and landfills as well former agricultural land. The objective of the ESAs was to evaluate and quantify potential liabilities associated with the acquisition and development of the properties.

Site Investigation and Remediation

- ***Kimco Realty Corporation, multiple locations in California and Nevada, –*** Serves Principal-in-Charge and program manager for investigation and remediation of several dry-cleaner sites in California (Cupertino, Daly City, Lakewood, and LaVerne) and Reno, Nevada. Projects range from investigation of soil impact to remediation of soil and groundwater. Mr. Willis is responsible for developing remedial strategies, negotiating with regulatory agencies, and providing technical direction to staff in order to evaluate and remediate site impacts, and bring sites to regulatory closure.

- ***Baker Cold Storage, Port of Long Beach Pier B Facility, California –*** Serves as project manager for investigation, remediation and redevelopment support of a 12-acre former wood treatment facility in the Port of Long Beach. The site is impacted with pentachlorophenol (PCP), metals, VOCs, and dioxins/furans. In addition, tidally influenced groundwater is impacted with PCP and petroleum hydrocarbons and methane charged from oilfield operations. Mr. Willis evaluated investigation data, managed a groundwater investigation program and develop a remedial approach for soil and groundwater. Mr. Willis successfully streamlined the regulatory process by aggregating the remedial work plans including RCRA closure of a drip pad, into one encompassing work plan (Soil and Groundwater Response Plan) and one Remedial Design Document ([RDD] that incorporated the facility design components into building mitigation design), and securing agency approvals on components of site construction concurrent with development of the RDD. Site is currently being developed with a 250,000 square-foot cold storage facility.
- ***RREEF, Villa Marina Marketplace, Marina Del Rey, California —*** Mr. Willis managed the design and installation of a groundwater treatment system to treat groundwater impacted from metals and selenium to meet NPDES discharge requirements for a basement dewatering system for a shopping center. He currently manages the operation, maintenance and reporting associated with the ongoing dewatering system.
- ***Black Mountain Industrial Complex Remedial Design and Implementation, Nevada –*** Served as project manager for expedited investigation and remediation program for the Tronox industrial facility within the BMI Complex. Previously the world's largest magnesium production facility during World War II, the site was later utilized for the manufacture of rocket fuel, other products, and most recently alkali and manganese oxide-based chemicals. Historical Industrial operations resulted in subsurface impacts from heavy metals, perchlorate, pesticides, chlorinated solvents, asbestos, radionuclides, and other chemicals. Developed streamlined investigation and remedial approach, prepared remedial plans, and rapidly mobilized and managed a team of staff and subcontractors to remove approximately 800,000 cubic yards of soil from the site to meet commercial soil cleanup goals for direct contact exposure in an expedited timeframe.
- ***Hawaii Wood Preserving Company Treatment Facility, Maui, Hawaii –*** Served as project manager, for decommissioning, investigation, remediation, and closure for a former wood treatment facility to allow for redevelopment. The site operated as from 1972 to 2001 to treat lumber with PCP, chromated copper arsenate (CCA), permithrin, and disodium octoborate. Chemicals were profiled, all equipment was decontaminated and ecommissioned, and verification sampling was conducted as part of decommissioning. A remedial investigation and remedial alternatives analysis was developed and implemented to investigate and develop a path-forward to closure. The implemented remedial approach consisted of site capping and long-term groundwater monitoring.
- ***Lockheed Martin Former International Light Metals Facility, Torrance, California —*** Served as project manager and principal investigator for a 67-acre aerospace facility where client objective was expedited redevelopment. The project included facility demolition, preparation and implementation of a Resource Conservation and Recovery Act (RCRA) closure plan for 11 permitted RCRA units, negotiations with the Department of Toxic Substance Control (DTSC), preparation of a RCRA Facility Assessment (RFA) (210 features identified that required intrusive investigation), implementation of a RCRA Facility Investigation (RFI) for soil and groundwater, preparation of a health-based risk assessment, and implementation of soil remediation. Site closure for soil was granted only three years after project initiation, in contrast to the normal six to eight year process, and has been used as an example by head DTSC officials as an example of

industry and the regulatory community working together to achieve expedited site closures for property redevelopment purposes. Mr. Willis also developed strategy for groundwater investigation and remediation and negotiated the corrective action consent agreement (CACA) with DTSC.

- ***Playa Capital Corporation, Playa Vista Development Project, Los Angeles, California —*** Mr. Willis served as program manager for the Playa Vista project, one of the largest and most visible brownfield development projects in the country. At 1,100 acres, it is the largest underway in Los Angeles County. His primary responsibility included environmental program management (including scoping, developing, scheduling, and tracking environmental activities for the development project), risk management (including developing and negotiating with agencies for appropriate cleanup criteria), remedial strategy/management (including development and implementation of pilot tests and oversight of investigation and remediation activities), agency/RP/buyer negotiations, consultant and contractor selection/oversight, coordination with Playa's infrastructure group on the development/implementation of integrated remedial approach where appropriate, litigation support, data management, and transactional support with respect to the sale of remediated parcels.
- ***Project Manager, Confidential Client, Buena Park, California —*** Served as project manager for multi-media remediation project at a commercial development in Buena Park, California. The site was a former food processing facility that was redeveloped into commercial offices and warehouse space. Evaluated the environmental liability for a Real Estate Investment Trust (REIT) that subsequently purchased the property, and managed remediation program in conjunction with site redevelopment.
- ***Project Manager, Brownfield Redevelopment, Torrance, California —*** Served as project manager for site redevelopment project for a PacTrust. Evaluated environmental liabilities associated with a 12-acre parcel that was part of a butadiene plant (Del Amo Superfund Site) left undeveloped as a brownfield, and formulated a strategy to expedite regulatory closure and redevelopment. A comprehensive investigation was completed on the parcel, and the report submitted to the Environmental Protection Agency (EPA) for review. Successfully negotiated with EPA to conduct a non-Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) closure program. Conducted soil remediation program under EPA oversight in conjunction with site construction activities.
- ***Project Manager, Investigation and Remediation Program, Safety Kleen, Vancouver, British Columbia, Canada —*** Managed remediation of former solvent recycler transfer stations in British Columbia and Alberta, Canada. Sites involved characterization and remediation of soil and perched groundwater zones. Assessed feasibility of vapor extraction for cleanup of vadose zone contamination, and designed and installed a dewatering system for perched water in former tank cavities and surficial saturated zone for Vancouver transfer station. Achieved regulatory site closure two years faster than previous consultant's estimate.
- ***Cupples Manufacturing, Investigation and Remediation Program, La Mirada, California —*** Project manager for soil/groundwater characterization and remediation program at a truck maintenance facility in La Mirada, California. Conducted an underground storage tank and clarifier removal program in conjunction with site characterization activities. Implemented remediation of soil and groundwater impacted with petroleum hydrocarbons. Negotiated and received closure from Regional Water Quality Control Board (RWQCB).
- ***Alberta Environment, Abandoned Wood Treatment Sites, Various Locations, Alberta, Canada —*** Project manager for the Wood Preserving Sites Characterization Program for Alberta

Environment. Performed site characterization of four former wood preservation sites in Alberta, Canada. The sites had been used for many years for treating wood poles and railroad ties with a pentachlorophenol/diesel mixture. Soil and/or groundwater were impacted at the sites. Soil borings and groundwater monitoring wells were installed, and laboratory analysis of soil and groundwater was performed, to help determine the lateral and vertical migration of dissolved-phase hydrocarbons in the groundwater and dense non-aqueous phase liquids (DNAPLs) through glacial tills and several non-confining layers. Detailed drilling and sampling plans were necessary to ensure correct evaluation of vertical DNAPL migration. Aquifer tests were performed and receptor data were collected in order to formulate a quantitative assessment of both health-based and environmental risk.

- ***Texaco Refining and Marketing Inc., Investigation and Remediation Programs, Various Locations, Southern California —*** Responsible for remediation programs at several petroleum retail outlets for Texaco in the southern California area. Projects included soil and groundwater investigation programs, underground storage tank (UST) removals, remedial design (including design and implementation of vapor extraction and aquifer tests), implementation of remedial program, and operation and maintenance of remediation systems. This included designing, specifying, permitting, and installing of all equipment (including piping, downhole pumps, off-gas treatment, and water treatment).
- ***Groundwater Contamination Investigation and Analysis, Technisol, Raymond, Alberta, Canada —*** Conducted a groundwater investigation program at a solvent recycling facility located in southern Alberta, Canada. The program was implemented to determine the lateral and vertical extent of several species of chlorinated volatile organic compounds present in the confined aquifer beneath the facility. Aquifer testing was performed to estimate migration rates and to provide preliminary data for remedial action. Successfully negotiated with Alberta Environment (lead regulatory agency) for monitored natural attenuation approach.
- ***Pier A Railyard, Port of Los Angeles, Los Angeles, California —*** Managed a soil and groundwater investigation program at a Port of Los Angeles rail transfer yard. The objective of the project was to characterize previously identified polynuclear aromatic compounds, volatile organic compounds, and petroleum hydrocarbons in the soil and groundwater, and identify any regulated building materials in the site structures in order to facilitate an expedited redevelopment program. The project was finished ahead of schedule and under budget.
- ***Soil and Groundwater Remediation, Texaco, Various Locations, Southern California —*** Conducted vapor extraction tests, performed data analysis, and generated recommendations for an industrial manufacturing facility to determine the viability of using vapor extraction for remediating chlorinated solvents, primarily tetrachloroethene (PCE), present in the soil beneath the facility. Each test was designed to assess air flow rates and vacuums, vertical interference and crossflow, radii of influence, potential for water upwelling, and effectiveness of vapor extraction in both vadose and capillary zones. Extracted vapors were collected to determine volatile organic compound concentrations. Data were used to determine well spacing and slotting intervals, optimum flow rate/vacuum combinations, extraction blower sizing, and vapor treatment equipment.
- ***Texaco, Various Locations, Southern California—*** Responsible for preparation of South Coast Air Quality Management District (SCAQMD) permitting, installation, operation and maintenance of thermal and catalytic oxidizers/vapor extraction systems for the remediation of soil (containing petroleum hydrocarbons) beneath operating service stations.

Litigation Support

- ***Litigation Support, Confidential Client, City of Commerce, California –*** Conducted site review of historical records, developed and implemented soil, soil vapor, and groundwater investigation, and developed Site Conceptual Model (SCM) for former aerospace facility that was now developed as a multi-tenant warehouse. Successful in being able reconstruct historical SCM to show that environmental impacts were caused by historic aerospace operations from the 1940s to 1960s and not from the more recent tenant operations. Provided information and deposition for property management firm's counsel.
- ***Mediation Support, Confidential Client, Los Angeles, California –*** Project manager for mediation support of insurance claim for cost reimbursement for handling, transportation and disposal of petroleum contaminated soil encountered during development of a high rise on a former hospital site. Work consisted of using photogrammetry and historical records to develop a volume of contaminated soil and expert witness report using spatial data analysis, rebuttal of expert witness reports, and expert witness testimony as part of mediation where a judgement was made in favor of our client for the full reimbursement cost.

EDUCATION

REGISTRATIONS

Certified Environmental Manager, Nevada, No. EM 2252

JACOB A. LACY, CHMM, REM
ASSOCIATE ENVIRONMENTAL CONSULTANT

Mr. Lacy has an exceptional record of accomplishment in management and support of environmental projects and programs. Highly adept at coordinating activities across multiple initiatives. Special expertise in auditing, risk mitigation, regulatory analysis/enforcement, RCRA, and site remediation. Experienced at developing policies and procedures, performing research, and conducting presentations. Extensive knowledge of environmental regulations at the Federal level, as well as in Maryland and Virginia. Strong in building relationships with government representatives. Certified Hazardous Materials Manager (CHMM), Registered Environmental Manager (REM), Hazardous Waste Compliance Manager, and Environmental Management Systems Auditor.

REPRESENTATIVE EXPERIENCE

Consulting

- ***JBG Smith, Bethesda, Maryland*** — Coordinate environmental management and remediation activities for major DC based land developer from 2022-Current. Projects include management of contaminated soil, UST removal, and review of Phase I & Phase II reports. Assist in pre-construction activities including planning for soil disposal, regulatory interaction, and moisture/mold mitigation. Also provide guidance in Spill Prevention Control & Countermeasure issues, hazardous waste management & disposal, and planning for the abatement of hazardous building materials (typically asbestos).

- ***MDOT-Maryland Aviation Administration, Baltimore, Maryland*** — On-site Environmental Compliance & Permitting Support from 2015-2022. Served in an onsite staff capacity charged with the responsibility of managing and leading Environmental Compliance efforts for two State Owned Airports (BWI & Martin State). Independently and autonomously managed duel Hazardous Waste Programs, including storage, segregation, packaging, and maintaining an inventory of waste items. Scheduled waste removal events with various transporters, and rigidly tracked manifest. Produced Bi-Annual reports to regulatory authorities on behalf of the Client. Served on an Agency-wide Permit Committee, where contractor/tenant building permits were reviewed and evaluated for potential environmental hazards and impacts, including indoor air quality issues and hazardous building materials. Investigated issues associated with tenant and client Spill Prevention Control and Countermeasure Plans (SPCC) and directed resolution with responsible parties. Issues typically included improper storage & handling of fuels and chemicals. Authored Phase I reports for derelict properties purchased by the Airport Authority.

- ***MDOT-Motor Vehicle Administration, Glen Burnie, Maryland*** — Environmental Compliance & Support from 2014-2015. Revised a Spill Prevention Control and Countermeasure Plan (SPCC) covering all aboveground and underground storage tanks (37,800 gallons total) at the headquarters in Glen Burnie, MD. Updated a Compliance Focused Environmental Management System (EMS) manual which applied to the entire organization. Completed a beta test and data population of a new EMS document management system. Revised a stormwater management plan governing the activities associated with the facility's MS4 permit. Administered hazardous & universal waste management training.

- ***NASA Goddard Space Flight Center, Greenbelt, Maryland*** — Phase I Environmental Site Assessment completed in 2014. Performed a Phase I Environmental Site Assessment at a space satellite tracking facility located on the Goddard campus. Reviewed all accessible records

pertaining to the site and conducted a physical evaluation in addition to holding employee interviews to determine if any environmental hazards were present.

- ***Washington Suburban Sanitary Commission (WSSC), Laurel, Maryland*** — Right of Entry Coordinator from 2012-2015. Aided multiple engineering firms in obtaining entry permits for sanitary sewer infrastructure on private, public, and commercial properties. Worked closely with client (WSSC) and project teams to facilitate EPA-mandated sewer repairs. Communicate extensively with project engineers, government agencies, and consulting companies. Conduct property research and verify ownership. Resolved issues such as denial of entry by property owners and business concerns.

Electrical Utility

- ***Potomac Electric Power Company (PEPCO), Washington, DC*** — Sr. Environmental Program Manager from January through May 2022. Provided management and oversight of multiple environmental compliance programs for electrical power utility serving nearly 900,000 customers across the District of Columbia, as well as Montgomery & Prince Georges Counties in Maryland. Responsible for maintenance and oversight of Hazardous Waste Contingency Plans for three Service Centers designated as Large Quantity Generators. Also charged with ensuring compliance with hazardous waste storage and biennial reporting. Tasked with Tier II Reporting for over 40 transmission facilities (Substations). Conducted compliance inspections at various facilities including fleet maintenance, transformer maintenance, waste storage, and salvage yards.

Local Government

- ***City of Newport News Department of Engineering, Newport News, Virginia*** — Environmental Specialist II from 2004-2012. Coordinated environmental compliance programs for Engineering Dept. that manages and maintains entire infrastructure for 120-mile2 city. Planned and managed projects to remediate environmentally contaminated properties. Investigated and resolved environmental contamination from USTs and other compliance issues. Worked on projects related to State of Virginia's Chesapeake Bay Preservation Act (CBPA). Conducted compliance and program audits. Worked in conjunction with multiple departments. Reviewed residential and commercial construction plans and environmental studies for CBPA compliance.

Attachment A	Existing Drainage
Attachment B	Geotechnical Report
Attachment C	Proposed Drainage
Attachment D	HydroCalc Results

1. INTRODUCTION

The purpose of this memorandum is to assess the potential impacts to the on-site hydrology resulting from the proposed 10950 Washington Boulevard Project (the Project). This assessment includes:

- A review of existing conditions, including existing drainage patterns, soil and groundwater conditions, site perviousness, connections to the Culver City (the City) storm drain system, and existing storm drain capacity,
- A description of proposed conditions, including changes to existing drainage patterns and site perviousness, and proposed storm drain infrastructure,
- An analysis of peak flow in the existing and proposed conditions for the 50-year storm, and
- A description of potential Best Management Practices (BMPs) to capture and treat stormwater on-site.

Hudson Pacific, the Applicant, proposes to develop a mixed-use development (Project) on an approximately 5.8-acre (250,932 square feet [sf]) site (Project Site) located at 10950 Washington Boulevard within the Clarkdale neighborhood of the City of Culver City (City). The Project Site is currently developed with two currently vacant commercial/office buildings totaling approximately 160,438 sf of commercial floor area and two connected surface parking lots. One parking lot is adjacent to the eastern Building 1 (the "North Lot"), and the other is located directly south of the western Building 2 (the "South Lot"). The Project Site is bound by Washington Boulevard to the north and northwest, commercial uses to the east, residential uses to the south, and a Mosque and residential uses to the west.

The Project Site has a General Plan land use designation of Mixed-Use Medium, which permits 65 dwelling units per acre. The Applicant proposes a Density and Other Bonus Incentives density increase in return for reservation of 79 units as affordable for low-income households for a period of 55 years. The Project's total unit count of 508 units (including the 79 low income units) is thus consistent with the applicable Mixed Use Medium density of 65 dwelling units per acre.

The Project would demolish all existing buildings and parking facilities on the Project Site and construct a new 5-story (up to a height of 61-feet) mixed-use development over one level of subterranean parking. The Project would include two, 5-story buildings (Building A and Building B) up to 61 feet in height that would include a total of 508 multi-family dwelling units (including 79 Low Income units) and 14,087 sf commercial use. The Project's 508 residential units would consist of 90 studio units, 241 one-bedroom units, and 177 two-bedroom units. The Project would include a total of 715 vehicular parking spaces (685 residential and 30 commercial), with 606 spaces provided within one subterranean level and 109 spaces provided on the enclosed first level of the building. Two points of vehicular access would be provided to the Project Site via a north driveway and south driveway, both along Washington Boulevard.

The Project's 14,087 sf of commercial space would be located along the Washington Boulevard frontage of Building A. The Project would include a total of 114,169 sf of open space. Of this total, 20,450 sf would be provided as private open space within balconies or private patios distributed throughout the Project Site. The remaining 93,719 sf would be common open space.

DRAFT

2. DRAINAGE CONDITIONS

2.1 EXISTING DRAINAGE

In the existing condition, the site generally slopes south, with a total elevation change of approximately 14 feet. The highest slopes are exhibited at the southeast portion of the site, with slopes of approximately 3 percent. The existing site is divided into two primary drainage areas, one which flows southwest to Washington Boulevard (Existing Drainage Area 1), and one which flows southeast to a low point at the southeast corner of the site (Existing Drainage Area 2). Refer to Attachment A for existing drainage area delineation. Approximately 91 percent (5.2 acres) of the site is impervious.

Stormwater that is collected within Existing Drainage Area 1 is routed to the curb face along Washington Boulevard. This stormwater then flows southwest along Washington Boulevard to a catch basin at the northeast corner of the intersection of Washington Boulevard and Huron Avenue. Per the Culver City storm drain map, there is a 24" reinforced concrete pipe in Washington Boulevard that collects flows from this catch basin and conveys flows southwest. The full flow capacity of this pipe is calculated as 24.78 CFS.

Stormwater that is collected within Existing Drainage Area 2 flows off-site through openings in the site wall at the low point of the site. This stormwater flows southeast along Milton Avenue, then southwest along Aletta Avenue, then southeast on Harter Avenue into a catch basin on the north side of Harter Avenue between Aletta Avenue and Culver Boulevard. Per the Culver City storm drain map, this catch basin and three other catch basins join to a 36" reinforced concrete pipe, which then joins with a 66" reinforced concrete pipe that flows southeast in Harter Avenue.

According to the report by Geotechnologies, Inc. titled "Environmental Impact Report, Soils and Geology Issues" dated November 17, 2023, groundwater was observed at 27 feet below grade, which corresponds to an approximate elevation of 26.5 feet above mean sea level. According to this report, the historic high groundwater is on the order of 20 feet below grade. Based on these findings, Geotechnologies anticipates that on-site stormwater infiltration will not be feasible for the Project due to the high groundwater level and the proposed subterranean parking garage. Refer to Attachment B for the report by Geotechnologies, Inc.

2.2 PROPOSED DRAINAGE

In the proposed condition, approximately 89 percent (5.14 acres) of the site is impervious. All stormwater generated on-site is to be routed into an on-site stormwater treatment system as required by the Los Angeles (LA) County Low Impact Development Manual. The overflow from this system is to be routed to the low point of the site and flow into the street in Milton Avenue. Refer to Attachment C for proposed drainage area information.

DRAFT

3. HYDROLOGY ANALYSIS

Hydrology for the Project Site was calculated using the Los Angeles County HydroCalc program, which is based on the Modified Rational Method. The Modified Rational Method (MODRAT) uses the design storm and time of concentration to calculate runoff at various intervals during the storm, resulting in a runoff hydrograph. The volume of runoff is calculated as the area under the hydrograph curve. The runoff resulting from the 50-year storm for the pre- and post-developed condition is shown in Table 1 below. Full HydroCalc results are provided in Attachment D.

Table 1 – HydroCalc Results for 50-Year Storm

Pre-/Post-Developed	Percent Impervious (%)	Peak Flow (cfs)	24-Hour Volume (ac-ft)
Pre-Developed	91	12.79	2.19
Post-Developed	89	12.76	2.15

Due to the decrease in impervious area, runoff peak flow is reduced by 0.2% in the post-developed condition and 24-hour volume is reduced by 1.8% in the post-developed condition. Increasing the perviousness of the site is expected to decrease the flow and volume that will need to be managed and reduce the risk of flooding.

4. LOW IMPACT DEVELOPMENT AND BEST MANAGEMENT PRACTICES

Low Impact Development (LID) is a strategy implemented to mitigate the impacts of runoff and stormwater pollution as close to the source as possible, using BMPs in compliance with the National Pollutant Discharge Elimination System (NPDES).

Per the LA County LID Manual, the required treatment volume for non-residential projects is the change in Stormwater Quality Design Volume (ΔSWQDv) between the pre-developed (undeveloped, 1% impervious) and post-developed condition for the greater of the 0.75-inch, 24-hour rain event and the 85th percentile, 24-hour rain event, which is considered to cover the portion of rain events with the highest pollutant loading (the “first flush”). The undeveloped and post-developed SWQDv can be calculated using HydroCalc.

On-site BMPs are prioritized in order of design preference per the LA County LID Manual. The order of priority is as follows:

1. Infiltration and/or harvest and use of 100 percent of the ΔSWQDv on-site

2. Biofiltration of 1.5 times the volume of the ΔSWQDv that is not reliably retained on-site

In this analysis, the entire post-developed 85th percentile volume is analyzed (without subtracting the undeveloped 85th percentile volume) for a more conservative approach. The 85th percentile, 24-hour runoff volume per HydroCalc is 19,363cubic feet (0.445acre-feet).

Per the report by Geotechnologies, Inc. titled “Environmental Impact Report, Soils and Geology Issues”, on-site stormwater infiltration is not recommended for the Project.

DRAFT

The proposed BMP for the Project is a rainwater capture and use system. The system will be designed to store the 85th percentile, 24-hour runoff volume and utilize the stored rainwater for on-site drip irrigation.

5. CONCLUSION – HYDROLOGY IMPACTS

Due to the decrease in impervious area from the existing condition to the proposed condition, the Project is anticipated to decrease the peak flow and the runoff volume during the 50-year design storm. Thus, the demand on the surrounding storm drain infrastructure is expected to be reduced. On-site storm drainage will be sized to convey the 25-year design storm. Therefore, Project impacts to stormwater infrastructure capacity are expected to be less than significant.

The Project will implement BMPs in accordance with the LA County LID Manual to reduce the impacts of runoff and stormwater pollution for the 85th percentile, 24-hour rain event, which is considered to address the portion of rain events with the highest pollutant load. Therefore, Project impacts to stormwater quality are expected to be less than significant.

Attention: Chris Pearson

Subject: Environmental Impact Report, Soils and Geology Issues
Proposed Mixed-Use Development
10950 Washington Boulevard, Culver City, California

Dear Mr. Pearson:

1.0 INTRODUCTION

This document is intended to discuss potential soil and geological issues for the proposed development, as required by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. This report included seven exploratory excavations, information from previous geotechnical investigations performed at the site, collection of representative samples, laboratory testing, engineering analysis, review of published geologic data, review of available geotechnical engineering information and the preparation of this report.

2.0 SITE CONDITIONS

The Project Site is located at 10950 Washington Boulevard in Culver City, California. The Project Site is roughly 5.8 acres in area, bounded by Washington Boulevard to the northwest, commercial and residential developments to the northeast, residential developments to the southeast, and a mosque and residential developments to the southwest. The Project Site is shown relative to nearby topographic features in the enclosed Vicinity Map.

The Project Site grade descends gently to the south. Based on review of the elevation contours presented in the NavigateLA Website, developed by the City of Los Angeles Bureau of Engineering, the site grade ranges from approximate elevation 66 feet Above Mean Sea Level (AMSL) near the northern portion of the site, to approximate elevation 52 feet at the southern portion of the site.

The Project Site is currently developed with a one- and two-story commercial building, a three-story commercial building, and surface parking lots. Vegetation at the Project Site is minimal, and consists of mature trees and bushes, contained in planter areas. Drainage across the site appears to be by sheetflow to the south.

3.0 PROJECT SCOPE

Preliminary information concerning the proposed development was provided by the client. In addition, the preliminary architectural plans prepared by KFA, dated January 15, 2025, were reviewed for the preparation of this report. The proposed mixed-use development will consist of two 5-story buildings over one common subterranean parking level. It is anticipated that the finished floor of the subterranean parking level will extend to an approximate depth of 11 feet below the proposed ground floor level.

The proposed development will be designed in accordance with the applicable California Building Code.

4.0 FIELD EXPLORATION

This firm has conducted previous explorations at the Project Site, pertaining to previously proposed projects. The explorations were conducted on October 20, 2012, and May 20, 2017, and consisted of excavating one boring and six test pits. The boring was drilled to a depth of 60 feet below grade with the aid of a truck-mounted drilling machine using 8-inch diameter hollowstem augers. The test pits were excavated to depths ranging between 5 and 10 feet below grade with the aid of a 4-inch diameter hand auger. The exploration locations are shown on the Plot Plan and the geologic materials encountered are logged on Plates A-1 through A-7.

The location of exploratory excavations was determined from hardscaped features shown in the enclosed Plot Plan. Elevations of the exploratory excavations were determined from elevation contours presented in the NavigateLA Website. The location and elevation of the exploratory excavations should be considered accurate only to the degree implied by the method used.

5.0 SUBSURFACE CONDITIONS

5.1 Geologic Materials

Fill materials were encountered in the exploratory excavations to depths ranging between 1 and 3 feet below the existing grade. Fill materials observed in the excavations consist of a mixture of clayey silt, sandy silt, and silty sand. The fill ranges from medium brown to reddish brown in color, and is slightly moist to moist, stiff, or medium dense, and fine to coarse grained.

The fill is in turn underlain by native alluvial soils consisting of interlayered mixtures of sand, silt and clay. The alluvial soils range in color from medium brown, yellowish brown, and grayish brown, and are moist to wet, medium dense to very dense, or stiff to very stiff, and fine to coarse grained. More detailed descriptions of the earth materials encountered may be obtained from individual logs of the subsurface excavations.

The geologic materials consist of detrital sediments deposited by river and stream action typical to this area of Los Angeles County. More detailed descriptions of the earth materials encountered may be obtained from individual logs of the subsurface excavations.

5.2 Groundwater

Groundwater was encountered in Boring B1, at an approximate depth of 27 feet below the ground surface. Based on the elevation contours presented in the NavigateLA Website, the observed groundwater elevation corresponds to approximate elevation 26.5 feet AMSL.

The historically highest groundwater level was established by review of California Geological Survey Seismic Hazard Evaluation Report 023 Plate 1.2 entitled "Historically Highest Ground Water Contours". Review of this plate indicates that the historically highest groundwater level is on the order of 20 feet below grade. A copy of this map is included in the appendix as Historically Highest Groundwater Levels.

Fluctuations in the level of groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time of the measurements reported herein. Fluctuations also may occur across the site.

6.0 REGIONAL GEOLOGIC SETTINGS AND FAULTING

6.1 Regional Geologic Settings

The Project Site is located in the Los Angeles Basin and within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are characterized by northwest-trending blocks of mountain ridges and sediment-floored valleys. The dominant geologic structural features are northwest trending fault zones that either die out to the northwest or terminate at east-west trending reverse faults that form the southern margin of the Transverse Ranges (Yerkes, 1965).

The Los Angeles Basin is located at the northern end of the Peninsular Ranges Geomorphic Province. The basin is bounded by the east and southeast by the Santa Ana Mountains and San Joaquin Hills. It is bounded to the northwest by the Santa Monica Mountains. Over 22 million years ago the Los Angeles basin was a deep marine basin formed by tectonic forces between the North American and Pacific plates. Since that time, over 5 miles of marine and non-marine sedimentary rock as well as intrusive and extrusive igneous rocks have filled the basin. During the last 2 million years, defined by the Pleistocene and Holocene epochs, the Los Angeles basin and surrounding mountain ranges have been uplifted to form the present-day landscape. Erosion of the surrounding mountains has resulted in deposition of unconsolidated sediments in low-lying areas by rivers such as the Los Angeles River. Areas that have experienced subtle uplift have been eroded with gullies.

6.2 Regional Faulting

The enclosed "Regional Fault Location Map" shows the location of faults mapped in the greater Los Angeles area. Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be negligible (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude is not well established.

Two major buried thrust fault structures in the Los Angeles area are the Elysian Park fold and thrust belt and the Torrance-Wilmington fold and thrust belt. It is postulated that the Elysian Park structure was responsible for the magnitude 5.9, October 1, 1987, Whittier Narrows earthquake, and that the Torrance-Wilmington structure was responsible for the magnitude 5.0, January 19, 1989, Malibu earthquake. The magnitude 6.7, January 17, 1994, Northridge earthquake was caused by a buried thrust fault located beneath the San Fernando Valley.

7.0 SOIL AND GEOLOGY ISSUES

a) Fault Activity

Based on criteria established by the California Division of Mines and Geology (CDMG) now called California Geologic Survey (CGS), faults may be categorized as Holocene-active, Pre-Holocene faults, and Age-undetermined faults. Holocene-active faults are those which show evidence of surface displacement within the last 11,700 years. Pre-Holocene faults are those that have not moved in the past 11,700 years. Age-undetermined faults are faults where the recency of fault movement has not been determined. Faults showing no evidence of surface displacement within the last 1.6 million years are considered inactive for most purposes, with the exception of design of some critical structures.

Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the Southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be low (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude is not well established. Therefore, the potential for surface rupture on these surface-verging splays at magnitudes higher than 6.0 cannot be precluded.

The enclosed "Regional Fault Location Map" shows the location of faults mapped in the greater Los Angeles area. A list of faults located within 60 miles (100 kilometers) from the Project Site has been provided in the enclosed table titled: Seismic Source Summary Table.

This table is based on information provided by the USGS in their 2008 National Seismic Hazard Maps – Source Parameters database. The distances provided in this table are measured from a point selected near the center of the site. The following sections describe some of the regional Holocene-Active faults, Pre-Holocene faults, and blind thrust faults.

i) Holocene-Active Faults

Newport-Inglewood Fault System

The Newport-Inglewood Fault System is located 1.86 miles to the east of the Project Site. The Newport-Inglewood Fault System is a broad zone of discontinuous north to northwestern en echelon faults and northwest to west trending folds. The fault zone extends southeastward from West Los Angeles, across the Los Angeles Basin, to Newport Beach and possibly offshore beyond San Diego (Barrows, 1974; Weber, 1982; Ziony, 1985).

The onshore segment of the Newport-Inglewood Fault System extends for about 37 miles from the Santa Ana River to the Santa Monica Mountains. Here it is overridden by, or merges with, the east-west trending Santa Monica zone of reverse faults.

The surface expression of the Newport-Inglewood Fault System is made up of a strikingly linear alignment of domal hills and mesas that rise on the order of 400 feet above the surrounding plains. From the northern end to its southernmost onshore expression, the Newport-Inglewood Fault System is made up of: Cheviot Hills, Baldwin Hills, Rosecrans Hills, Dominguez Hills, Signal Hill-Reservoir Hill, Alamitos Heights, Landing Hill, Bolsa Chica Mesa, Huntington Beach Mesa, and Newport Mesa. Several single and multiple fault strands, arranged in a roughly left stepping en echelon arrangement, make up the fault zone and account for the uplifted mesas.

The most significant earthquake associated with the Newport-Inglewood Fault System was the Long Beach earthquake of 1933 with a magnitude of 6.3 on the Richter scale. It is believed that the Newport-Inglewood Fault System is capable of producing a 7.5 magnitude earthquake.

Santa Monica Fault

The Santa Monica Fault, located approximately 2.96 miles to the north of the Project Site, is a part of the Transverse Ranges Southern Boundary Fault System. The Santa Monica Fault extends east from the coastline in Pacific Palisades through Santa Monica and West Los Angeles and merges with the Hollywood Fault at the West Beverly Hills Lineament in Beverly Hills where its strike is northeast. It is believed that at least six surface ruptures have occurred in the past 50 thousand

years. In addition, a well-documented surface rupture occurred between 10 and 17 thousand years ago, although a more recent earthquake probably occurred 1 to 3 thousand years ago. This leads to an average earthquake recurrence interval of 7 to 8 thousand years.[a] It is thought that the Santa Monica Fault may produce earthquakes with a maximum magnitude of 7.4.

In 2018, the California Geological Survey established an Earthquake Fault Zone for the Santa Monica Fault. A copy of this map may be found in the Appendix.

Hollywood Fault

The Hollywood Fault is part of the Transverse Ranges Southern Boundary fault system. The Hollywood Fault is located approximately 4.96 miles north of the Project Site. This fault trends east-west along the base of the Santa Monica Mountains from the West Beverly Hills Lineament in the West Hollywood–Beverly Hills area to the Los Feliz area of Los Angeles. The Hollywood Fault is the eastern segment of the reverse oblique Santa Monica–Hollywood Fault. Based on geomorphic evidence, stratigraphic correlation between exploratory borings, and fault trenching studies, this fault is classified as active.

Until recently, the approximately 9.3-mile-long Hollywood Fault was considered to be expressed as a series of linear ground-surface geomorphic expressions and south-facing ridges along the south margin of the eastern Santa Monica Mountains and the Hollywood Hills. Multiple recent fault rupture hazard investigations have shown that the Hollywood Fault is located south of the ridges and bedrock outcroppings along portions of Sunset Boulevard. The Hollywood Fault has not produced any damaging earthquakes during the historical period and has had relatively minor micro-seismic activity. It is estimated that the Hollywood Fault is capable of producing a maximum 6.7 magnitude earthquake. In 2014, the CGS established an Earthquake Fault Zone for the Hollywood Fault.

Malibu Coast Fault

The Malibu Coast Fault is part of the Transverse Ranges Southern Boundary fault system, a west-trending system of reverse, oblique-slip, and strike-slip faults that extends for more than approximately 124 miles along the southern edge of the Transverse Ranges and includes the Hollywood, Raymond, Anacapa–Dume, Malibu Coast, Santa Cruz Island, and Santa Rosa Island Faults.

[a] *Southern California Earthquake Center, a National Science Foundation and U.S. Geological Survey Center. Active Faults in the Los Angeles Metropolitan Region, www.scec.org/research/special/SCEC001activefaultsLA.pdf; accessed August 2023.*

The Malibu Coast Fault System runs in an east-west orientation onshore subparallel to and along the shoreline for a linear distance of about 17 miles through the Malibu City limits, but also extends offshore to the east and west for a total length of approximately 37.5 miles. The onshore Malibu Coast Fault System involves a broad, wide zone of faulting and shearing as much as 1 mile in width. While the Malibu Coast Fault System has not been officially designated as an active fault zone by the State of California and no Special Studies Zones have been delineated along any part of the fault zone under the Alquist-Priolo Act of 1972, evidence for Holocene activity (movement in the last 11,000 years) has been established in several locations along individual fault splays within the fault system. Due to such evidence, several fault splays within the onshore portion of the fault system are identified as active.[b]

Large historic earthquakes along the Malibu Coast Fault include the 1979, 5.2 magnitude earthquake and the 1989, 5.0 magnitude earthquake.[c] The Malibu Coast Fault System is approximately 6.80 miles northwest of the Project Site and is believed to be capable of producing a maximum 7.0 magnitude earthquake.

Palos Verdes Fault

Studies indicate that there are several active on-shore extensions of the strike-slip Palos Verdes Fault, which is located approximately 8.58 miles southwest of the Project Site. Geophysical data also indicate the offshore extensions of the fault are active, offsetting Holocene age deposits. No historic large magnitude earthquakes are associated with this fault. However, the fault is considered active by the California Geological Survey. It is estimated that the Palos Verdes Fault is capable of producing a maximum 7.7 magnitude earthquake.

Raymond Fault

The Raymond Fault is located approximately 13.03 miles to the northeast of the Project Site. The Raymond Fault is an effective groundwater barrier which divides the San Gabriel Valley into groundwater sub-basins. Much of the geomorphic evidence for the Raymond Fault has been obliterated by urbanization of the San Gabriel Valley. However, a discontinuous escarpment can be traced from Monrovia to the Arroyo Seco in South Pasadena. The very bold, “knife edge” escarpment in Monrovia parallel to Scenic Drive is believed to be a fault scarp of the Raymond Fault. Trenching of the Raymond Fault is reported to have revealed Holocene movement (Weaver and Dolan, 1997).

[b] *City of Malibu Planning Department, Malibu General Plan, Chapter 5.0, Safety and Health Element, http://qcode.us/codes/malibu-general-plan/; accessed August 2023.*
[c] *California Institute of Technology, Southern California Data Center. Chronological Earthquake Index, www.data.scec.org/significant/malibu1979.html; accessed August 2023.*

The recurrence interval for the Raymond Fault is probably slightly less than 3,000 years, with the most recent documented event occurring approximately 1,600 years ago (Crook, et al, 1978). However, historical accounts of an earthquake that occurred in July 1855 as reported by Toppozada and others, 1981, places the epicenter of a Richter Magnitude 6 earthquake within the Raymond Fault. It is believed that the Raymond Fault is capable of producing a 6.8 magnitude earthquake. The Raymond Fault is considered active by the California Geological Survey.

Verdugo Fault

The Verdugo Fault is located approximately 14.14 miles to the northeast of the Project Site. The Verdugo Fault runs along the southwest edge of the Verdugo Mountains. The fault displays a reverse motion. According to Weber, et. al., (1980) 2 to 3 meters high scarps were identified in alluvial fan deposits in the Burbank and Glendale areas. Further to the northeast, in Sun Valley, a fault was reportedly identified at a depth of 40 feet in a sand and gravel pit. Although considered active by the County of Los Angeles, Department of Public Works (Leighton, 1990), and the United States Geological Survey, the fault is not designated with an Earthquake Fault Zone by the California Geological Survey. It is estimated that the Verdugo Fault is capable of producing a maximum 6.9 magnitude earthquake.

Sierra Madre Fault System

The Sierra Madre Fault alone forms the southern tectonic boundary of the San Gabriel Mountains in the northern San Fernando Valley. It consists of a system of faults approximately 75 miles in length. The individual segments of the Sierra Madre Fault system range up to 16 miles in length and display a reverse sense of displacement and dip to the north. The most recently active portions of the zone include the Mission Hills, Sylmar and Lakeview segments, which produced an earthquake in 1971 of magnitude 6.4. Tectonic rupture along the Lakeview Segment during the San Fernando Earthquake of 1971 produced displacements of approximately 2½ to 4 feet upward and southwestward.

It is believed that the Sierra Madre Fault System is capable of producing an earthquake of magnitude 7.3. The closest trace of the fault is located approximately 18.37 miles northeast of the Project Site.

Whittier-Elsinore Fault System

The Whittier Fault is located approximately 20.71 miles to the southeast of the Project Site. The Whittier Fault together with the Chino Fault comprises the northernmost extension of the northwest trending Elsinore fault system. The mapped surface of the Whittier Fault extends in a west-northwest direction for a

distance of 20 miles from the Santa Ana River to the terminus of the Puente Hills. The Whittier Fault is essentially a strike-slip, northeast dipping fault zone which also exhibits evidence of reverse movement along with en echelon[d] fault segments, en echelon folds and anatomizing (braided) fault segments. Right lateral offsets of stream drainages of up to 8800 feet (Durham and Yerkes, 1964) and vertical separation of the basement complex of 6,000 to 12,000 feet (Yerkes, 1972), have been documented. It is believed that the Whittier fault is capable of producing a 7.8 magnitude earthquake.

The Whittier Narrows earthquakes of October 1, 1987, and October 4, 1987, occurred in the area between the westernmost terminus of the mapped trace of the Whittier Fault and the frontal fault system. The main 5.9 magnitude shock of October 1, 1987, was not caused by slip on the Whittier Fault. The quake ruptured a gently dipping thrust fault with an east-west strike (Haukson, Jones, Davis and others, 1988). In contrast, the earthquake of October 4, 1987, is assumed to have occurred on the Whittier Fault as focal mechanisms show mostly strike-slip movement with a small reverse component on a steeply dipping northwest striking plane (Haukson, Jones, Davis and others, 1988).

Santa Susana Fault

The Santa Susana Fault extends approximately 17 miles west-northwest from the northwest edge of the San Fernando Valley into Ventura County and is at the surface high on the south flank of the Santa Susana Mountains. The fault ends near the point where it overrides the south-side-up South strand of the Oak Ridge fault. The Santa Susana Fault strikes northeast at the Fernando lateral ramp and turns east at the northern margin of the Sylmar Basin to become the Sierra Madre Fault. This fault is exposed near the base of the San Gabriel Mountains for approximately 46 miles from the San Fernando Pass at the Fernando lateral ramp east to its intersection with the San Antonio Canyon fault in the eastern San Gabriel Mountains, east of which the range front is formed by the Cucamonga Fault. The Santa Susana Fault has not experienced any recent major ruptures except for a slight rupture during the 6.5 magnitude 1971 Sylmar earthquake.[e] The Santa Susana Fault is considered to be active by the County of Los Angeles. It is believed that the Santa Susana Fault has the potential to produce a 6.9 magnitude earthquake. The closest trace of the fault is located approximately 21.25 miles northwest of the Project Site.

[d] *En echelon refers to closely spaced, parallel or subparallel, overlapping or step-like minor structural features.*
[e] *California Institute of Technology, Southern California Data Center. Chronological Earthquake Index, www.data.scec.org/significant/santasusana.html; accessed August 2023.*

San Gabriel Fault System

The San Gabriel Fault System is located approximately 22.31 miles northeast of the Project Site. The San Gabriel Fault system comprises a series of subparallel, steeply north-dipping faults trending approximately north 40 degrees west with a right-lateral sense of displacement. There is also a small component of vertical dip-slip separation. The fault system exhibits a strong topographic expression and extends approximately 90 miles from San Antonio Canyon on the southeast to Frazier Mountain on the northwest. The estimated right lateral displacement on the fault varies from 34 miles (Crowell, 1982) to 40 miles (Ehlig, 1986), to 10 miles (Weber, 1982). Most scholars accept the larger displacement values and place the majority of activity between the Late Miocene and Late Pliocene Epochs of the Tertiary Era (65 to 1.8 million years before present).

Portions of the San Gabriel Fault System are considered active by California Geological Survey. Recent seismic exploration in the Valencia area (Cotton and others, 1983; Cotton, 1985) has established Holocene offset. Radiocarbon data acquired by Cotton (1985) indicate that faulting in the Valencia area occurred between 3,500 and 1,500 years before present.

It is hypothesized by Ehlig (1986) and Stitt (1986) that the Holocene offset on the San Gabriel Fault System is due to sympathetic (passive) movement as a result of north-south compression of the upper Santa Susana thrust sheet. Seismic evidence indicates that the San Gabriel Fault System is truncated at depth by the younger, north-dipping Santa Susana-Sierra Madre Faults (Oakeshott, 1975; Namson and Davis, 1988).

San Andreas Fault System

The San Andreas Fault system forms a major plate tectonic boundary along the western portion of North America. The system is predominantly a series of northwest trending faults characterized by a predominant right lateral sense of movement. At its closest point the San Andreas Fault system is located approximately 40.82 miles to the northeast of the Project Site.

The San Andreas and associated faults have had a long history of inferred and historic earthquakes. Cumulative displacement along the system exceeds 150 miles in the past 25 million years (Jahns, 1973). Large historic earthquakes have occurred at Fort Tejon in 1857, at Point Reyes in 1906, and at Loma Prieta in 1989. Based on single-event rupture length, the maximum Richter magnitude earthquake is expected to be approximately 8.25 (Allen, 1968). The recurrence interval for large earthquakes on the southern portion of the fault system is on the order of 100 to 200 years.

ii) Pre-Holocene Faults

Overland Avenue Fault

The National Seismic Hazard Maps – Source Parameters database (USGS, 2008) does not include the Overland Fault. But based on the studies of Poland, et al. (1959) the concealed trace of the Overland Avenue Fault is located approximately ¼-mile to the east of the Project Site, along Overland Avenue. The location of this fault is shown in the enclosed Local Geologic Map.

The Overland Fault extends from the northwest flank of the Baldwin Hills to Santa Monica Boulevard, in the Vicinity of Overland Avenue. The fault trends northwest between the Charnock Fault and the Newport-Inglewood Fault Zone. The Overland Fault is depicted by Poland, et al. (1959) as an inferred fault, cutting late Pleistocene terrace deposits and concealed under alluvium. Ziony, et al. (1979) note that the alluvium is not cut by the fault, an interpretation that is in agreement with more recent work by Ziony and Jones (1989).

The dip of the Overland Avenue fault is unknown; however, based on historical water levels, displacement along the fault is believed to be vertical, with an offset of approximately 30 feet. It is anticipated that the west site of the fault has moved downward relative to the east side. The fault apparently has not been observed at the surface. The Overland Fault has been designated as a Pre-Holocene fault by the California Geological Survey (CGS), having its most recent surface displacement within the late Quaternary Age (last 1.6 million years).

No Special Studies Zones have been delineated by the State of California, or any other jurisdiction, along any part of the Overland Fault. Based on the poorly constrained location of the Overland Fault near the site, its concealment under the alluvium, and the age of its most recent displacement, it is the opinion of this firm that the potential for surface rupture at the site due to this fault is considered remote.

Anacapa-Dume Fault

The Anacapa–Dume Fault, located approximately 8.27 miles to the northwest of the Project Site, is a near-vertical offshore escarpment exceeding 600 meters locally, with a total length exceeding 62 miles. This fault is also part of the Transverse Ranges Southern Boundary fault system. It occurs as close as 3.6 miles offshore south of Malibu at its western end, but trends northeast where it merges with the offshore segments of the Santa Monica Fault Zone. It is believed that the Anacapa–Dume Fault is responsible for generating the historic 1930 magnitude 5.2 Santa Monica earthquake, the 1973 magnitude 5.3 Point Mugu earthquake, and the 1979 and 1989 Malibu earthquakes, each of which possessed a magnitude of 5.0.[f]

[f] *City of Malibu Planning Department. Malibu General Plan, Chapter 5.0, Safety and Health Element,*

The Anacapa–Dume fault is thought to be capable of producing a maximum magnitude 7.2 earthquake.

iii) Blind Thrusts Faults

Blind or buried thrust faults are faults without a surface expression but are a significant source of seismic activity. By definition, these faults have no surface trace, therefore the potential for ground surface rupture is considered remote. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the Southern California area. Due to the buried nature of these thrust faults, their existence is sometimes not known until they produce an earthquake. Two blind thrust faults in the Los Angeles metropolitan area are the Puente Hills Blind Thrust and the Elysian Park Blind Thrust. Another blind thrust fault of note is the Northridge Fault located in the northwestern portion of the San Fernando Valley.

The Puente Hills Blind Thrust fault extends eastward from Downtown Los Angeles to the City of Brea in northern Orange County. The Puente Hills Blind Thrust Fault includes three north-dipping segments, named from east to west as the Coyote Hills segment, the Santa Fe Springs segment, and the Los Angeles segment. These segments are overlain by folds expressed at the surface as the Coyote Hills, Santa Fe Springs Anticline, and the Montebello Hills. The Los Angeles segment of the Puente Hills Blind Thrust is located approximately 4.44 miles to the east of the Project Site.

The Santa Fe Springs segment of the Puente Hills Blind Thrust fault is believed to be the cause of the October 1, 1987, Whittier Narrows Earthquake. Based on deformation of late Quaternary age sediments above this fault system and the occurrence of the Whittier Narrows earthquake, the Puente Hills Blind Thrust Fault is considered an active fault capable of generating future earthquakes beneath the Los Angeles Basin. A maximum moment magnitude of 7.0 is estimated by researchers for the Puente Hills Blind Thrust Fault.

The Elysian Park anticline is thought to overlie the Elysian Park Blind Thrust. This fault has been estimated to cause an earthquake every 500 to 1,300 years in the magnitude range 6.2 to 6.7. The Elysian Park anticline is approximately 9.43 miles to the southeast of the subject site.

The Mw 6.7 Northridge earthquake was caused by the sudden rupture of a previously unknown, blind thrust fault. This fault has since been named the Northridge Thrust, however it is also known in some of the literature as the Pico Thrust. It has been assigned a maximum magnitude of 6.9 and a 1,500-to-1,800-year recurrence interval. The Northridge Thrust is located 20.58 miles to the northwest of the Project Site.

http://qcode.us/codes/malibu-general-plan/; accessed August 2023.

b) Surface Ground Rupture

In 1972, the Alquist-Priolo Special Studies Zones Act (now known as the Alquist-Priolo Earthquake Fault Zoning Act) was passed into law. As revised in 2018, The Act defines "Holocene-active" Faults utilizing the same aging criteria as that used by California Geological Survey (CGS). However, established state policy has been to zone only those faults which have direct evidence of movement within the last 11,700 years. It is this recency of fault movement that the CGS considers as a characteristic for faults that have a relatively high potential for ground rupture in the future.

CGS policy is to delineate a boundary from 200 to 500 feet wide on each side of the Holocene-Active fault trace based on the location precision, the complexity, or the regional significance of the fault. If a site lies within an Earthquake Fault Zone, a geologic fault rupture investigation must be performed that demonstrates that the proposed building site is not threatened by surface displacement from the fault before development permits may be issued.

Ground rupture is defined as surface displacement which occurs along the surface trace of the causative fault during an earthquake. Based on research of available literature and results of site reconnaissance, no known Holocene-active or Pre-Holocene faults underlie the subject site. In addition, the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. As shown in the enclosed Earthquake Zones of Required Investigation Map, the nearest Earthquake Fault Zone is located approximately 1.75 miles to the east of the Project Site, for the Newport-Inglewood Fault. Based on these considerations, the potential for surface ground rupture at the subject site is considered low.

c) Seismicity

As with all of Southern California, the Project Site is subject to potential strong ground motion, should a moderate to strong earthquake occur on a local or regional fault. Design of any proposed structures on the site in accordance with the provisions of the applicable California Building Code will mitigate the potential effects of strong ground shaking.

d) Deaggregated Seismic Source Parameters

The peak ground acceleration (PGA) and modal magnitude for the Project Site was obtained from the USGS Probabilistic Seismic Hazard Deaggregation program (USGS, 2014). The parameters are based on a 2 percent in 50 years ground motion (2475-year return period). A shear wave velocity (Vs30) of 259 meters per second was utilized in the computation. The deaggregation program indicates a PGA of 0.87g and a mean magnitude of 6.69 for the site.

e) California Building Code Seismic Parameters

Based on information derived from the subsurface exploration, the Project Site is classified as Site Class D, which corresponds to a "Stiff Soil" Profile, according to Table 20.3-1 of ASCE 7-16. This information and the site coordinates were input into the OSHPD seismic utility program in order to calculate ground motion parameters for the site.

CALIFORNIA BUILDING CODE SEISMIC PARAMETERS	
California Building Code	2022
ASCE Design Standard	7-16
Site Class	D
Mapped Spectral Acceleration at Short Periods (S_S)	1.952g
Site Coefficient (F_a)	1.0
Maximum Considered Earthquake Spectral Response for Short Periods (S_{MS})	1.952g
Five-Percent Damped Design Spectral Response Acceleration at Short Periods (S_{DS})	1.301g
Mapped Spectral Acceleration at One-Second Period (S_1)	0.691g
Site Coefficient (F_v)	1.7*
Maximum Considered Earthquake Spectral Response for One-Second Period (S_{M1})	1.175g*
Five-Percent Damped Design Spectral Response Acceleration for One-Second Period (S_{D1})	0.783g*

** These values are determined based on the tabulated values shown on ASCE 7-16, Table 11.4-2 for the Long-Period Site Coefficient, F_v. It should be noted that the exception to performing a site-specific hazard analysis for structures on Site Class D for values of S_1 greater than or equal to 0.2 presented by ASCE 7-16 may be followed, provided the conditions outlined in the ASCE 7-16 Section 11.4.8 (including Supplement 3 of the ASCE 7 Standards) are implemented in the structural design and analyses. This exception recommends that, where a site-specific ground motion hazard analysis is not required, the S_{M1} determined by eq. (11.4-2) is increased by 50% for all applications of S_{M1} in this standard. The resulting value of the parameter S_{D1} determined by Eq. (11.4-4) shall be used for all applications of S_{D1} in this standard. This would require that the S_{M1} and S_{D1} values provided in the above table are increased by 50%.*

f) Liquefaction

Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures.

Based on review of the Earthquake Zones of Required Investigation for the Beverly Hills Quadrangle (CGS, 2018), a very small portion of the southern area of the Project Site is located within a "Liquefiable" area. This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake. A copy of this map is included in the Appendix.

A site-specific liquefaction analysis was performed following the Recommended Procedures for Implementation of the California Geologic Survey Special Publication 117A, Guidelines for Analyzing and Mitigating Seismic Hazards in California (CGS, 2008), and the EERI Monograph (MNO-12) by Idriss and Boulanger (2008). This semi-empirical method is based on a correlation between measured values of Standard Penetration Test (SPT) resistance and field performance data.

Groundwater was encountered during exploration at a depth of 27 feet below the existing grade. Based on review of the seismic hazard zone report of the Beverly Hills 7½-minute quadrangle (CDMG, 1998), the historically highest groundwater level for the site is mapped at a depth of 20 feet below the ground surface. Both the historically highest groundwater level and the current groundwater level were utilized for the enclosed liquefaction analysis.

Section 11.8.3 of ASCE 7-16 indicates that the potential for liquefaction shall be evaluated utilizing an acceleration consistent with the MCE_G PGA. Utilizing the OSHPD seismic utility program, this corresponds to a PGA_M of 0.92g. The USGS Probabilistic Seismic Hazard Deaggregation program (USGS, 2014) indicates a PGA of 0.87g (2 percent in 50 years ground motion) and a mean magnitude of 6.69 for the site. The liquefaction potential evaluation was performed by utilizing a magnitude 6.69 earthquake, and a peak horizontal acceleration of 0.92g.

The enclosed "Empirical Estimation of Liquefaction Potential" is based on Boring B1, which was excavated within the area of the site classified as susceptible to liquefaction. Standard Penetration Test (SPT) data were collected at 5-foot intervals. Soil samples were collected and conveyed to the laboratory for testing and analysis. The percent passing Number 200 sieve, Atterberg Limits, and Plasticity Index (PI) of the representative soil samples collected during our field exploration are presented on Plates E and F.

The procedure presented in the SP117A guidelines was followed in analyzing the liquefaction potential of the subject site. The SP 117A guidelines were developed based on a paper titled, "Assessment of the Liquefaction Susceptibility of Fine-Grained Soils", by Bray and Sancio (2006). According to the SP117A, soils having a Plastic Index greater than 18 exhibit clay-like behavior, and the liquefaction potential of these soils are considered to be low. Therefore, where the results of Atterberg Limits testing showed a Plastic Index greater than 18, the soils would be considered non-liquefiable, and the analysis of these soil layers was turned off in the liquefaction susceptibility column.

Based on CGS Special Publication 117A (CDMG, 2008), a factor of safety against the occurrence of liquefaction greater than about 1.3 can be considered an acceptable level of risk where high-quality, site-specific penetration resistance and geotechnical laboratory data is collected. The site-specific liquefaction analysis included in the Appendix indicates that the Project Site soils would not be susceptible to liquefaction during the ground motion expected during the design-based seismic event. Furthermore, the Project Site is not expected to be affected by potential impacts related to liquefaction, such as lateral spreading and surface manifestation.

g) Dynamic Settlement

Seismically-induced settlement or compaction of dry or moist, cohesionless soils can be an effect related to earthquake ground motion. Such settlements are typically most damaging when the settlements are differential in nature across the length of structures.

Some seismically-induced settlement of the proposed structure should be expected as a result of strong ground-shaking, however, due to the uniform nature of the underlying geologic materials, excessive differential settlements are not expected to occur.

h) Regional Subsidence

The Project Site is not located within a zone on known subsidence due to oil or other fluid withdrawal.

i) Landsliding

The Earthquake Zones of Required Investigation for the Beverly Hills Quadrangle (CGS, 2018) indicates that the Project Site is not located within an "Earthquake Induced Landslide" zone.

The probability of seismically-induced landslides occurring on the Project Site is considered to be negligible due to the gentle topographic relief observed across the Project Site. Therefore, potential impacts related to landsliding would be less than significant.

j) Collapsible Soils

Based on review of the enclosed consolidation curves, the soils to underlain the proposed structure are not considered prone to hydroconsolidation.

k) Tsunamis, Seiches and Flooding

Tsunamis are large ocean waves generated by sudden water displacement caused by a submarine earthquake, landslide, or volcanic eruption. Review of the County of Los Angeles Flood and Inundation Hazards Map, Leighton (1990), indicates the Project Site does not lie within the mapped tsunami inundation boundaries.

Review of the County of Los Angeles Flood and Inundation Hazards Map, Leighton (1990), indicates the Project Site lies within the potential mapped inundation boundaries of the Stone Canyon Dam, should the dam retaining these reservoirs fail during a seismic event. A determination of whether a higher site elevation would remove the Project Site from the potential inundation zones is beyond the scope of this investigation.

Review of the applicable Flood Insurance Rate Map (06037C1595G) indicates the Project Site lies within an area of minimal flood hazard (Zone X).

l) City of Los Angeles Methane Zone

Based on review of the NavigateLA Website, developed by the City of Los Angeles, Bureau of Engineering, Department of Public Works, the Project Site is located within the limits of a City of Los Angeles Methane Zone.

m) Oil Fields and Oil Wells

Based on review of the California Geologic Energy Management Division (CalGEM) On-line Mapping System, the Project Site is not located within the limits of an oil field. In addition, no oil or gas wells have been drilled at the site. The nearest oil well is located approximately ¼-mile to the southwest of the Project Site.

n) Temporary Excavations

All required excavations are expected to be conducted in accordance with the provisions of the applicable California Building Code. Therefore, the project would not result in any on-site or off-site landslide.

o) Ground Failure

The proposed construction will not cause or increase the potential for any seismic related ground failure on the subject site or adjacent sites.

p) Expansive Soils

The native site soils were found to be in the Very Low expansion range. The Expansion Index was found to be 7 for a bulk sample representative of the upper soils.

q) Sedimentation and Erosion

Grading, excavation and other earth moving activities could potentially result in erosion and sedimentation. For any grading proposed in the site from November to April (generally considered the rainy season) an erosion control plan consistent with the City of Culver City requirements would need to be prepared. Compliance with minimum code requirements will render project impacts related to sedimentation and erosion less than significant.

r) Landform Alterations

There are no significant hills, canyons, ravines, outcrops or other geologic or topographic features on the Project Site. Therefore, any proposed project would not adversely affect any prominent geologic or topographic features.

s) Septic Tanks

It is the understanding of this firm that sewers are available at the Project Site for wastewater disposal. No septic tanks or alternative disposal systems are necessary or anticipated for any future site projects.

8.0 GENERAL PRELIMINARY CONCLUSIONS AND RECOMMENDATIONS

Based upon the exploration, laboratory testing, and research, it is the preliminary finding of Geotechnologies, Inc. that construction of the proposed development is considered feasible from a geotechnical engineering standpoint.

During exploration, it was observed that the Project Site is underlain by a thin mantle of fill materials and native alluvial soils. The fill materials are not suitable for support of foundation systems or slabs-on-grade but may be reused for the preparation of compacted fill pads.

It is anticipated that excavation of the proposed subterranean parking garage will remove the existing fill materials, exposing competent native alluvial soils at the bottom. The proposed structure may be supported by conventional foundations bearing in the native alluvial soils expected at the subterranean subgrade.

It is anticipated that the installation of temporary shoring will be required for construction of the proposed subterranean parking garage. Where sufficient space is available, temporary excavations may be sloped at a 1:1 gradient.

Groundwater was encountered in Boring B1, at a depth of 27 feet below the ground surface. Based on the elevation contours presented in the NavigateLA Website, the observed groundwater elevation corresponds to approximate elevation 26.5 feet AMSL. The historically highest groundwater level for the site is on the order of 20 feet below grade. Based on review of the Level P1 Plan prepared by KFA, dated January 15, 2025, the lowest finished floor elevation of the proposed subterranean parking level will extend to an approximate depth of 11 feet below the proposed ground level. This depth corresponds to elevation 51.5 feet AMSL. Therefore, the bottom of the proposed structure is not expected to extend deeper than the current or historically highest groundwater levels, and implementation of temporary or permanent dewatering is not anticipated for the proposed project.

It is anticipated that on-site stormwater infiltration will not be feasible for the project. The groundwater level was observed during exploration at a depth of 27 feet below the existing grade. Current regulations require that the bottom of infiltration systems maintain a minimum vertical separation of 10 feet above the groundwater level. Based on this vertical separation, infiltration would have to occur within the upper 17 feet strata, which would be expected to overlap with the anticipated depth of the subterranean parking level and its foundation system. Infiltrating above the subterranean subgrade elevation is not recommended for areas located outside the proposed building footprint.

As with all of Southern California, the site is subject to potential strong ground motion from a moderate to strong earthquake on a local or regional fault. Design of the proposed development in accordance with the provisions of the most current California Building Code and Culver City provisions will mitigate the potential effects of strong ground shaking.

9.0 CLOSURE

The conditions identified in this document are typical of sites within this area of the City of Culver City, and of a type that are routinely addressed through regulatory measures. Geotechnologies, Inc. appreciates the opportunity to provide our services on this project. Should you have any questions please contact this office.

LOG OF TEST PIT NUMBER 6

Hudson 10950 Washington, LLC **Drilling Date: 05/20/17** **Elevation: 65'***

File No. 22460 **Method: Hand Auger**

km *Reference: NAVIGATE LA Website

Sample Depth ft.	Moisture Content %	Dry Density p.c.f.	Depth in feet	USCS Class.	Description Surface Conditions: Asphalt
			0 --		4-inch Asphalt over 5-inch Base
1	9.3	123.2	1 --		FILL: Silty to very coarse Sand, brown, slightly moist
			2 --	ML	Silt, medium dark brown with reddish hue, slightly moist to moist, dense
3	5.8	105.7	3 --	ML	Silt with very fine Sand, yellowish tan, slightly moist, very dense
			4 --		
5	2.4	109.3	5 --	SW	very coarse Sand, medium yellowish, slightly moist, very dense, minor gravel
			6 --		
7	1.4	129.9	7 --	SP	very Gravelly Sand, light tan yellowish brown, slightly moist, very dense
8	1.2	112.3	8 --	SW	minor 4" Cobbles, Gravelly Sand, medium brown, slightly moist to moist,
			9 --		very dense, large 6"-10" Cobbles at end of sample
			10 --		Total Depth 8 feet by refusal
					No Water
			11 --		No Caving
					Fill to 1 foot
			12 --		
			13 --		NOTE: The stratification lines represent the approximate boundary between earth types; the transition may be gradual.
			14 --		Used 4-inch diameter Hand-Augering Equipment; Hand Sampler
			15 --		
			16 --		
			17 --		
			18 --		
			19 --		
			20 --		
			21 --		
			22 --		
			23 --		
			24 --		
			25 --		

WATER ADDED AT 2 KSF

Description: Liquefaction Analysis
Boring No: B1

LIQUEFACTION EVALUATION (Idriss & Boulanger, EERI NO 12)

EARTHQUAKE INFORMATION:

Earthquake Magnitude (M):	6.7
Peak Ground Horizontal Acceleration, PGA (g):	0.92
Calculated Mag.Wtg.Factor:	1.234

GROUNDWATER INFORMATION:

Current Groundwater Level (ft):	27.0
Historically Highest Groundwater Level* (ft):	20.0
Unit Weight of Water (pcf):	62.4

* Based on California Geological Survey Seismic Hazard Evaluation Report

BOREHOLE AND SAMPLER INFORMATION:

Borehole Diameter (inches):	8
SPT Sampler with room for Liner (Y/N):	Y

LIQUEFACTION BOUNDARY:

Plastic Index Cut Off (PI):	18
Minimum Liquefaction FS:	1.3

Depth to Base Layer (feet)	Total Unit Weight (pcf)	Current Water Level (feet)	Historical Water Level (feet)	Field SPT Blowcount N	Depth of SPT Blowcount (feet)	Fines Content #200 Sieve (%)	Plastic Index (PI)	Vetical Stress σ_{vc}, (psf)	Effective Vert. Area (ac)	5.76
Flow Path Length (ft)	650.0
Flow Path Slope (vft/hft)	0.01
50-yr Rainfall Depth (in)	5.5
Percent Impervious	0.89
Soil Type	16
Design Storm Frequency	50-yr
Fire Factor	0
LID	False

Output Results

Modeled (50-yr) Rainfall Depth (in)	5.5
Peak Intensity (in/hr)	2.4894
Undeveloped Runoff Coefficient (Cu)	0.8096
Developed Runoff Coefficient (Cd)	0.8901
Time of Concentration (min)	9.0
Clear Peak Flow Rate (cfs)	12.7623
Burned Peak Flow Rate (cfs)	12.7623
24-Hr Clear Runoff Volume (ac-ft)	2.1516
24-Hr Clear Runoff Volume (cu-ft)	93724.8155

#REF!

10950 Washington Project

Vibration Level Calculations

Based on Federal Transit Administration, Office of Planning and Environment

N =	1.5

Construction Equipment	Project Equipment	Equipment Velocity Decibels @ 25 Feet* (VdB)	Equipment Peak Particle Velocity @ 25 Feet* (inches/second)	Distance to Receptor for < 0.5 PPV (Feet)	Estimated Velocity Decibels @ Distance** (VdB)	Estimated Peak Particle Velocity @ Distance*** (inches/second)
Unmitigated Vibration Levels						
Large Bulldozer	Yes	87	0.089	10	95	0.352
Loaded Trucks	Yes	86	0.076	10	94	0.300
Wheel Loader	Yes	86	0.076	10	94	0.300
Fork Lift	Yes	81	0.047	10	89	0.186
Jackhammer	Yes	79	0.035	10	87	0.138
Earth Mover	Yes	69	0.011	10	77	0.043
Small Bulldozer	Yes	58	0.003	10	66	0.0119

Source:

Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual,* 2018.

Notes:

* Values taken from Table 7-4.

** Based on the formula VdB = 20 x LOG10 (v/v_{ref}), where v_{ref} is equal to 1×10^{-6} in/sec (see page 111).

The approximate rms vibration velocity level (v) is calculated from PPV using a crest factor of 4 (see page 184).

*** Based on the formula $PPV(D) = PPV(25\ ft) \times (25/D)^N$, where D is equal to the distance (see page 185).

N = soil type classification factor (typically ranges from 1 to 1.5)

Attachment A LA County Sanitation Districts Sewage Generation Factors
Attachment B Estimated Annual Project Water Demand, EKI Environment & Water, Inc.
Attachment C Existing Utility Exhibit
Attachment D Fire Flow Requirements
Attachment E Fire Flow Availability
Attachment F Water Supply Assessment, EKI Environment & Water, Inc.

1. INTRODUCTION

The purpose of this memorandum is to assess the potential impacts to water supply lines resulting from the proposed 10950 Washington Boulevard Project (the Project). This assessment includes:

- A calculation of anticipated water (domestic and fire) demand including a description of water conservation features to be implemented by the Project,
- Fire flow requirements provided by the Culver City Fire Department,
- The number, locations, and flow tests for fire hydrants in the vicinity of the Project,
- A description of existing water mains and proposed water conveyance systems that would serve the Project,
- A determination of whether the water mains serving the Project site would have adequate capacity to accommodate the Project.

Hudson Pacific, the Applicant, proposes to develop a mixed-use development (Project) on an approximately 5.8-acre (250,932 square feet [sf]) site (Project Site) located at 10950 Washington Boulevard within the Clarkdale neighborhood of the City of Culver City (City). The Project Site is currently developed with two currently vacant commercial/office buildings totaling approximately 160,438 sf of commercial floor area and two connected surface parking lots. One parking lot is adjacent to the eastern Building 1 (the "North Lot"), and the other is located directly south of the western Building 2 (the "South Lot"). The Project Site is bound by Washington Boulevard to the north and northwest, commercial uses to the east, residential uses to the south, and a Mosque and residential uses to the west.

The Project Site has a General Plan land use designation of Mixed-Use Medium, which permits 65 dwelling units per acre. The Applicant proposes a Density and Other Bonus Incentives density increase in return for reservation of 79 units as affordable for low-income households for a period of 55 years. The Project's total unit count of 508 units (including the 79 low income units) is thus consistent with the applicable Mixed Use Medium density of 65 dwelling units per acre and state density bonus law.

The Project would demolish all existing buildings and parking facilities on the Project Site and construct a new 5-story (up to a height of 61-feet) mixed-use development over one level of subterranean parking. The Project would include two, 5-story buildings (Building A and Building B) up to 61 feet in height that would include a total of 508 multi-family dwelling units (including 79 Low Income units) and 14,087 sf commercial use. The Project's 508 residential units would consist of 91 studio units, 239 one-bedroom units, and 178 two-bedroom units. The Project would include a total of 715 vehicular parking spaces (685 residential and 30 commercial), with 606 spaces provided within one subterranean level and 109 spaces provided on the enclosed first level of the building. Two points of vehicular access would be provided to the Project Site via a north driveway and south driveway, both along Washington Boulevard.

The Project's 14,087 sf of commercial space would be located along the Washington Boulevard frontage of Building A. The Project would include a total of 114,169 sf of open space. Of this total, 20,450 sf would be provided as private open space within balconies or private patios distributed throughout the Project Site. The remaining 93,719 sf would be common open space.

2. PROJECTED WATER DEMAND

2.1 DOMESTIC WATER DEMAND

Water demand estimates for the Project have been prepared by EKI Environment & Water, Inc (EKI). Results are summarized in Table 1 below. Refer to Attachment B for tables by EKI.

Table 1 – Estimated Water Demand

Land Use	Units	Water Demand (gpd/unit)	Water Demand (AFY) (2)	Water Demand (GPM)
Existing				
Commercial	--	-- (3)	3.8	2.4
		Subtotal Existing	**3.8**	**2.4**
Proposed				
Residential Units	508 units	173 gpd/unit (1)	99	61
Food Services	14,087 sf	0.11 gpd/sf (3)	1.8	1.1
Covered Parking	269,421 sf	0.020 gal/sf/cleaning (3)	0.20	0.12
Community Pools and Spa	1,305 sf	-- (3)	0.11	0.068
Irrigated Landscaping	39,980 sf	-- (3)	1.8	1.1
Distribution System Losses	--	-- (3)	5.2	3.2
		Net Water Demand	**108**	**67**
		Subtotal Existing	**3.8**	**2.4**
		Net Increase	**104**	**65**

(1) Generation Rates per LA County Sanitation Districts Sewage Generation Factors. This analysis assumes sewer generation rates are equivalent to water use. See Attachment A for Generation Factors Table.

(2) Water demand values in this table are per analysis by EKI dated August 2024. Refer to Attachment B.

(3) Refer to Attachment B for water demand calculations and assumptions.

The project is expected to include a number of water-efficient features, including, but not limited to:

- Use of low-flow lavatory faucets, kitchen faucets, toilets, and urinals in accordance with CalGreen Code; and
- Inclusion of low-water use landscaping and high-efficiency irrigations systems to minimize outdoor water use in accordance with MWELO.

2.2 FIRE WATER DEMAND

The required fire flow rate to service the Project Site is determined by Appendix B of the California Fire Code, as adopted by Chapter 9.02.005 of the Culver City Municipal Code. Based on correspondence with the Culver City Fire Department included in Attachment D, we understand the required fire flow for the site is 4000 GPM at 20 PSI for 4 hours.

3. WATER INFRASTRUCTURE CAPACITY

Water service to the Project is to be provided by Golden State Water Company (GSWC), which operates and maintains domestic water and fire water facilities within Culver City. Based on the area map provided by GSWC, there are three 8-inch water distribution mains in the vicinity of the Project Site: an 8-inch cast-iron main in Washington Boulevard, an 8-inch ductile iron main in Charles Avenue, and an 8-inch ductile iron main in Milton Avenue. Refer to Attachment C for existing utility exhibit.

The Project proposes to connect to the 8-inch main in Washington Boulevard for both domestic and fire water services.

When analyzing the Project's infrastructure capacity, the projected demands for both fire suppression and domestic water are considered. Although domestic water demand is the Project's main contributor to water consumption, fire flow demands have a much greater instantaneous impact on infrastructure, and therefore are the primary means for analyzing infrastructure capacity.

Based on a hydraulic model by the Culver City Fire Prevention Bureau dated December 22, 2023, one existing hydrant at the Project frontage on Washington Boulevard has an available fire flow of 3770 GPM at 20 PSI for 2 hours. See Attachment E. The required fire flow per the Culver City Fire Department is 4000 GPM at 20 PSI for 4 hours. Based on conversation with the Culver City Fire Department, we understand that fire hydrants in Culver City are assumed to supply a minimum flow of 1000 GPM at 20 PSI. We understand that fire hydrants within 300 feet of the Project Site are considered to contribute to the fire flow availability to the Project Site. Based on the Culver City Water Map, we understand there are three (3) known existing hydrants within 300 feet of the Project Site. Therefore, we understand that the difference of 230 GPM between the required and tested flow is met by the three additional hydrants within 300 feet of the Project Site and that an additional fire flow test is not required by the Culver City Fire Department. We also understand based on conversation with the Culver City Fire Department that the difference between the flow for "4 hours" written in the required fire flow (Attachment D) and the flow for "2 hours" written in the tested fire flow availability (Attachment E) is irrelevant to this analysis. Based on these results, the Project fire hydrant flow needs can be supplied by the existing infrastructure.

4. CONCLUSION – WATER IMPACTS

Based on the Water Supply Assessment by EKI dated August 8, 2024, sufficient water supply is available to GSWC to meet all future demands within the GSWC Culver City service area, including those associated with the Project.

Based on hydraulic modeling by the Culver City Fire Prevention Bureau, one existing hydrant at the project site has an available fire flow of 3770 GPM at 20 PSI. Based on available record information, there are another three (3) known existing hydrants within 300 feet of the Project Site. Each hydrant is assumed to supply at least 1000 GPM at 20 PSI. Considering the fire flow test received and the presence of other existing hydrants, the existing fire flow availability is greater than the required fire flow of 4000 GPM at 20 PSI, and is therefore sufficient to accommodate the new development.

The approved Water Supply Assessment is included in Attachment F.

Abbreviations:

"AFY" = acre-feet per year
"du" = dwelling unit
"gal" = gallons
"gpd" = gallons per day
"LACSD" = Los Angeles County Sanitation District
"MWELO" = Model Water Efficient Landscape Ordinance
"Proposed Project" = 10950 Washington Boulevard
"sq ft" = square feet
"WSA" = Water Supply Assessment

Notes:

(a) Estimated land use square footages for food services and residential units per Reference 1, for the covered parking and irrigated landscaping per Reference 2, and for the residential community pools and spas per Reference 3.

(b) Water demand factors for covered parking per Reference 4. Water demand factors for the residential units and food services were calculated based on wastewater generation factors per Reference 5. Wastewater generation factors per Reference 5 were provided by the LACSD and represent the average wastewater flow factor for each land use. For the purpose of this analysis, wastewater flows are assumed to be 90% of the total water demand for each land use consistent with the methodology used in the Paramount Pictures Master Plan, which was approved by the City of Los Angeles in April 2016 per Reference 6 and Reference 7. Therefore, flow factors provided in Reference 5 were divided by 0.9 to determine the water demand factors for residential unit and food service uses.

(c) The estimated completion date for the Proposed Project is 2030 per Reference 8.

(d) Residential units for the Proposed Project include 239 one bedroom apartments, 178 two bedroom apartments, and 91 studio apartments per Reference 1.

(e) "Food Services" include a grab and go market and coffee shop per Reference 8.

(f) Water use associated with the covered parking is anticipated to be minimal, limited to cleaning of the facility. For purposes of this WSA, it is assumed that the covered parking will be cleaned twelve times per year and that 0.02 gal/sq ft will be used per each cleaning event, per Reference 4.

Table 1

Summary of Estimated Incremental Annual Project Water Demand

10950 Washington Boulevard, Culver City, California

(g) Estimates of the landscape irrigation and community pool and spa water demands are based on MWELO calculations for Estimated Total Water Use per Reference 9. See Table 2 for the MWELO calculations.

(h) Estimated distribution system water loss associated with delivery of water to the Proposed Project is based on a rate of 4.8% per Reference 10 and includes both real and apparent losses.

(i) Existing site demands per Reference 11. Existing demands are subtracted from total projected water demands to show the incremental increase in demands associated with the Proposed Project (i.e., net increase in water demand). Existing demands are estimated as the average of the last four years of water use at the project site based on available metered data (2020-2023). At the time of preparing this WSA, historical water usage data for the first four months of 2020 and the last month of 2023 were unavailable. For purposes of this analysis, the monthly average water use data from 2021 was used to approximate the water use for the first four months of 2020 in order to estimate the total annual water use at the site in 2020. The water use data for the last month in 2023 was not approximated in the average historical site use calculation as it was expected to be minimal.

(j) Totals may not sum due to rounding.

Table 2

Estimated Project Landscaping Water Demand

10950 Washington Boulevard, Culver City, California

Landscaping Land Use (a)	[A] Area of Land Use (ac)	[B] ETo (in) (b)	[C] ETAF (c)	[D] MAWA (AFY) D = A x B x C (d)				
				2025	2030	2035	2040	2045
Irrigated Landscaping								
Residential Landscaped Area	0.92	44.2	0.55	0	1.8	1.8	1.8	1.8
Water Features								
Community Pools and Spas	0.030	44.2	1.0	0	0.11	0.11	0.11	0.11
Estimated Total Outdoor Water Use				**0**	**2.0**	**2.0**	**2.0**	**2.0**

Abbreviations:

"ac" = acre

"AFY" = acre-feet per year

"ETo" = Reference Evapotranspiration Rate

"ETAF" = Evapotranspiration Adjustment Factor

"in" = inches

"MAWA" = Maximum Applied Water Allowance

Notes:

(a) Residential landscaping land use square footage per Reference 1 and surface area square footages for the community pool and spas per Reference 2.

(b) Annual reference evapotranspiration rate for the Santa Monica region per Reference 3.

(c) The ETAF is assumed to be 0.55 for residential landscaped areas per Reference 4, and 1.0 for water features per Reference 5.

(d) The MAWA calculations are described in Reference 4.

Hi Dave,

Yes, the square footages are for the proposed building. Please see the snip below for square footage breakdown from the architectural plans.

GROSS BUILDING AREA

INCLUDES EXTERIOR WALL & BALCONIES, EXCLUDES ELEVATOR + STAIRSHAFTS

LEVEL	AREA (SF)
TYPE IA - COMMERCIAL	
1ST FLOOR	18640
	18640
TYPE IA - PARKING	
LEVEL P1	212253
1ST FLOOR	54332
	266585
TYPE IA - RESIDENTIAL	
1ST FLOOR	74050
	74050
TYPE VA - RESIDENTIAL	
2ND FLOOR	115474
3RD FLOOR	118012
4TH FLOOR	114797
5TH FLOOR	111252
	459535
GRAND TOTAL	818810

Thank you,
Patience

Good morning Dave,

I am involved in a project at 10950 Washington Boulevard in Culver City. For the utility report component of the EIR for this project, I am interested in understanding the fire flow requirements at this site. The fire flow information request form is attached. Please let me know if you need any additional information for your analysis.

I appreciate your help!

Thank you,
Patience

INFORMATION ON FIRE FLOW AVAILABILITY
(To be Completed by Water Purveyor)

THE FIRE HYDRANT NEAREST THE PROPOSED STRUCTURE IN WITHIN 10 FEET VIA VEHICULAR ACCESS. THE FIRE FLOW SERVICE WILL BE RENDERED FROM A 8 INCH DIAMETER WATER MAIN

MAIN LOCATED ON Washington Blvd.

CITY OR AREA Culver City

(# FEET)	(DIRECTION)	OF (NEAREST CROSS STREET)
390 feet	Northeast	Huron Ave.

UNDER NORMAL OPERATING CONDITIONS THE FIRE FLOW AVAILABLE FROM THIS 6 inch HYDRANT IS 3770 GPM AT 20 PSI RESIDUAL FOR 2 HOURS AT 81 PSI STATIC

WATER PURVEYOR	DATE	
Golden State Water Company, A Subsidiary of American States Water Company	12/22/23	
SIGNATURE	TITLE	TELEPHONE #
	Operations Engineer	562-907-9200 310-413-0420

Part III

CONDITIONS FOR APPROVAL BY BUILDING AND SAFETY DIVISION
(To be Completed by Building Department)

THE FIRE FLOW MAY BE APPROVED FOR SINGLE AND TWO-FAMILY DWELLINGS WHEN THE ABOVE INFORMATION IS COMPLETE AND SHOWS THAT THE FOLLOWING MINIMUM REQUIREMENTS ARE MET AND THE PROPERTY IS NOT IN FIRE ZONE 4.

THE WATER SYSTEM IS CAPABLE OF DELIVERING AT LEAST 750 GPM AT 20 PSI FOR TWO HOURS. THE DISTANCE FROM THE STRUCTURE TO THE FIRE HYDRANT DOES NOT EXCEED 450 FEET VIA VEHICULAR ACCESS.

APPROVED BY	DATE
OFFICE	

THIS APPROVAL IS VALID FOR SIX (6) MONTHS

Where the Water Service does not meet the requirements of the Building and Safety Division, Fire Department approval of plot plan will be required before a Building Permi can be issued by the Building Department and all approvals by the Fire Department will be issued by the Fire Prevention Division only.

Test Date and Time: 12/22/23 HYDRAULIC MODELED FLOW

Hydrant Number: 69

Project Address: 10950 Washington Blvd.

Culver City Employees take pride in effectively providing the highest levels of service to enrich the quality of life for the community by building on our tradition of more than seventy-five years of public service, by our present commitment, and by our dedication to meet the challenges of the future.

APPENDICES

Appendix A HPP 10950 Washington Blvd Preliminary Project Review, received 29 November 2023.

Appendix B Project Demand UWMP Inclusion Analysis

1 INTRODUCTION

Included herein is a Senate Bill (SB) 610-compliant water supply assessment (WSA) in support of the 10950 Washington Boulevard Project ("Proposed Project"; **Figure 1**). The Proposed Project site is comprised of approximately 5.5 acres located in the City of Culver City, California. The Proposed Project includes the demolition of the existing commercial structures on the project site and the construction of a new, five-story residential building totaling 552,873 square feet (sq ft) that includes 508 new dwelling units and approximately 14,087 sq ft of commercial use on the ground floor (KFA Architecture, 2024; KPFF, 2024). Additionally, the Proposed Project would include 269,421 sq ft of covered parking (KFA Architecture, 2024). A detailed site plan for the Proposed Project is included in **Appendix A**. The Proposed Project is located within the Golden State Water Company (GSWC) Culver City service area, and GSWC will be the water service provider for the Proposed Project (**Figure 2**).

The information provided in this WSA is consistent with California Water Code (CWC) §10910-10912 requirements and the California Department of Water Resources' (DWR's) *Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001: To Assist Water Suppliers, Cities, and Counties in Integrating Water and Land Use Planning*, dated 8 October 2003. The text of specific sub-sections of the CWC is included within gray text boxes with italicized font at the beginning of specific sections of this WSA. The information presented in those respective sections, and the associated tables and figures, respond directly to CWC requirements.

The purpose of this WSA is to evaluate whether GSWC has sufficient water supply to meet the current and planned water demands within the GSWC Culver City service area, including the demands associated with the Proposed Project, during normal, single, and multiple dry hydrologic years over a 20-year time horizon.[1] More specifically, this WSA includes:

- A summary of the WSA requirements articulated in CWC §10910-10912 and a description of how they apply to the Proposed Project;
- A description and analysis of the current and projected future water demands of the Proposed Project through the year 2045;
- A description and analysis of the historical, current, and projected future water demands for the GSWC Culver City service area through the year 2045;
- A description and analysis of the current and projected future water supplies for the GSWC Culver City service area through the year 2045; and
- A comparison of the water supplies and demands for the GSWC Culver City service area, including the projected water demands associated with the Proposed Project.

[1] The CWC specifies that a WSA must look at supplies and demand on a 20-year horizon (i.e., to 2044), but given the available data, this WSA looks beyond that to 2045.

The information contained in this WSA is based primarily on the 2020 Urban Water Management Plan (UWMP) prepared for the GSWC Culver City service area, except where updated with relevant water demand and supply reliability and other information from sources including GSWC, the Santa Monica Basin Groundwater Sustainability Plan (GSP), and others, as noted.

This WSA concludes that sufficient water supply is available to GSWC to meet all future demands within the GSWC Culver City service area, including those associated with the Proposed Project.

2 GENERAL REQUIREMENTS FOR THE PREPARATION OF A WATER SUPPLY ASSESSMENT

The purpose of this section is to outline what types of projects require the preparation of a WSA, who is responsible for its preparation, and the necessary components of a WSA.

2.1 Applicability of SB Bill 610 to the Proposed Project

☑ ***CWC § 10910 (a)***

Any city or county that determines that a project, as defined in Section 10912, is subject to the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code) under Section 21080 of the Public Resources Code shall comply with this part.

☑ ***CWC § 10912***

For the purposes of this part, the following terms have the following meanings:

(a) "Project" means any of the following:

(1) A proposed residential development of more than 500 dwelling units.

(2) A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.

(3) A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.

(4) A proposed hotel or motel, or both, having more than 500 rooms.

(5) A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.

(6) A mixed-use project that includes one or more of the projects specified in this subdivision.

(7) A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

(b) If a public water system has fewer than 5,000 service connections, then "project" means any proposed residential, business, commercial, hotel or motel, or industrial development that would account for an increase of 10 percent or more in the number of the public water system's existing service connections, or a mixed-use project that would demand an amount of water equivalent to, or greater than, the amount of water required by residential development that would represent an increase of 10 percent or more in the number of the public water system's existing service connections.

The Proposed Project would include a residential development of more than 500 dwelling units and therefore satisfies the definition of a "project" requiring a WSA pursuant to SB 610 (CWC §10910(a) and 10912(a)(3)). It should be noted that per SB 221, over 500 dwelling units may also trigger the need for a Water Supply Verification.

2.2 Responsibility for Preparation of the Water Supply Assessment

☑ ***CWC § 10910 (b)***

The city or county, at the time that it determines whether an environmental impact report, a negative declaration, or a mitigated negative declaration is required for any project subject to the California Environmental Quality Act pursuant to Section 21080.1 of the Public Resources Code, shall identify any water system that is, or may become as a result of supplying water to the project identified pursuant to this subdivision, a public water system, as defined in Section 10912, that may supply water for the project. If the city or county is not able to identify any public water system that may supply water for the project, the city or county shall prepare the water assessment required by this part after consulting with any entity serving domestic water supplies whose service area includes the project site, the local agency formation commission, and any public water system adjacent to the project site.

The Proposed Project is located within the GSWC Culver City service area, and potable water for the Proposed Project will be supplied by GSWC. Therefore, in accordance with CWC §10910(b), GSWC is the entity responsible for adopting the WSA for the Proposed Project.

2.3 Components of a Water Supply Assessment

☑ ***CWC § 10910 (c) (4)***

If the city or county is required to comply with this part pursuant to subdivision (b), the water supply assessment for the project shall include a discussion with regard to whether the total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and planned future uses, including agricultural and manufacturing uses.

☑ ***CWC § 10911***

(b) The city or county shall include the water supply assessment provided pursuant to Section 10910, and any information provided pursuant to subdivision (a), in any environmental document prepared for the project pursuant to Division 13 (commencing with Section 21000) of the Public Resources Code.

(c) The city or county may include in any environmental document an evaluation of any information included in that environmental document provided pursuant to subdivision (b). The city or county shall determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the project, in addition to existing and planned future uses. If the city or county determines that water supplies will not be sufficient, the city or county shall include that determination in its findings for the project.

As listed above in CWC §10910(c)(4), the primary purpose of a WSA is to evaluate whether sufficient water supply is available to meet all future demands within the water supplier's service area, including those associated with the Proposed Project, during normal and dry hydrologic years for a 20-year time horizon.[2] Therefore, the following information is included in this WSA:

[2] The CWC specifies that a WSA must look at supplies and demand on a 20-year horizon (i.e., to 2044), but given the available data, this WSA looks beyond that to 2045.

- A description and analysis of the current and projected future water demands of the Proposed Project through the year 2045;
- A description and analysis of the historical, current, and projected future water demands for the GSWC Culver City service area through the year 2045;
- A description and analysis of the current and projected future water supplies for the GSWC Culver City service area through the year 2045; and
- A comparison of the water supplies and demands for the GSWC Culver City service area, including the projected water demands associated with the Proposed Project.

3 PROJECT DESCRIPTION

The Proposed Project site is comprised of approximately 5.5 acres located in the City of Culver City, California, inclusive of Assessor Parcel Numbers (APNs) 4208-024-001, 4208-024-002, and 4208-025-018 (Hudson Pacific Properties, 2023a; KPFF, 2024). The Proposed Project site is bordered by Washington Boulevard to the north, Elenda Street to the east, mixed commercial and residential buildings to the west, and Charles Avenue and residential buildings to the south.

The Proposed Project will involve the demolition of existing commercial buildings on the project site and the construction of a new, five-story residential building, which includes approximately:

- 241 one-bedroom apartments, 177 two-bedroom apartments, and 90 studio apartments, for a total of 508 new dwelling units;
- 14,087 sq ft of food service use on the ground floor;
- 1,305 sq ft of residential community pools and spas;
- 39,980 sq ft of irrigated landscape area; and
- 269,421 sq ft of covered parking (Hudson Pacific Properties, 2023a; KPFF, 2023a; KFA Architecture, 2024).

The anticipated completion and full buildout of the Proposed Project is expected by 2030 (Hudson Pacific Properties, 2023d).

4 PROJECT WATER DEMAND

The City of Culver City has adopted green building standards and water efficient landscaping ordinances consistent with previous versions of the CalGreen building standards and the California Model Water Efficient Landscape Ordinance (MWELO). Landscaping will also be compliant with Assembly Bill (AB) 1572. As part of state requirements, all new developments must comply with these efficiency standards. As such, the Proposed Project development is expected to include a number of water-efficient features, including, but not limited to:

- Use of low-flow lavatory faucets, kitchen faucets, toilets, and urinals in accordance with CalGreen Code; and
- Inclusion of low-water use landscaping and high-efficiency irrigation systems to minimize outdoor water use in accordance with MWELO.

As described below, the average annual water demand for the Proposed Project was estimated based on: (1) literature values for commercial water use (City of Los Angeles Bureau of Engineering, 2012; Los Angeles County Sanitation Districts, 2024) and (2) information about the Proposed Project provided by the Hudson Pacific Properties (Hudson Pacific Properties, 2023d). **Table 1** includes a summary of the water demand projections associated with the proposed land uses at the Proposed Project completion. Full buildout of the Proposed Project is assumed to be completed by 2030 (Hudson Pacific Properties, 2023d).

4.1 Indoor Water Use

Table 1 provides a summary of the land uses, unit demand factors, and respective water demands associated with each land use anticipated in the Proposed Project. Below is a summary of the calculations and assumptions for each indoor land use category.

4.1.1 Residential Use

Based on current development plans, the Proposed Project is expected to include 508 units of residential use (Hudson Pacific Properties, 2023b). Of these 508 units, 177 are two-bedroom units, 241 are one-bedroom units, and 90 are studio units (KPFF, 2024). The water demand for the residential use is estimated using the Los Angeles County Sanitation Districts (LACSD) wastewater generation factor for residential land uses with five or more units (LACSD, 2024). For the purpose of this analysis, wastewater flows are assumed to be 90% of the total water demand for each land use consistent with the methodology used in the Paramount Pictures Master Plan, which was approved by the City of Los Angeles in April 2016 (City of Los Angeles Department of City Planning, 2016; Incledon, 2015). As such, the LACSD wastewater generation factor for residential land uses with five or more units was divided by 0.9 to determine a water demand factor of 173 gallons per day (gpd) per dwelling unit. Based on this residential demand factor, the total residential use for the Proposed Project at full buildout is estimated to be 99 acre-feet per year (AFY).

4.1.2 Food Service Use

The Proposed Project includes 14,087 sq ft of food service use, including a grab-and-go market and coffee shop (Hudson Pacific Properties, 2023d; KPFF, 2024). The water demand for the food service use is estimated using the LACSD wastewater generation factor for commercial store land uses (LACSD, 2024). Similar to the residential demand factor calculation, wastewater flows are assumed to be 90% of the total water demand for each land use. As such, the LACSD wastewater generation factor for commercial store land uses was divided by 0.9 to determine a water demand factor of 0.11 gpd per sq ft. The resultant water demand associated with the food service portion of the Proposed Project at full buildout is estimated to be 1.8 AFY.

4.1.3 Total Indoor Water Use

Based on the above calculations and assumptions, total indoor water use for the Proposed Project is estimated to be 100 AFY at full buildout.

4.2 Covered Parking Water Use

The Proposed Project includes ground floor parking, as well as one level of semi-subterranean parking, totaling approximately 269,421 sq ft of covered parking facilities (KFA Architecture, 2024). Water use associated with this space is anticipated to be minimal, limited to cleaning of the facility approximately twelve times per year (LADWP, 2022). It is assumed that 0.020 gallons per sq ft will be used per each cleaning event (City of Los Angeles Bureau of Engineering, 2012). Thus, it is estimated that 0.20 AFY will be used for purposes of cleaning the parking facility.

4.3 Community Landscaping and Water Feature Water Use

The Proposed Project includes general landscaping along with pools and spas as a part of the residential community (collectively referred to as "water features"). The projected water demands for the community landscaping and water features were estimated based on the Maximum Applied Water Allowance (MAWA) per the MWELO (DWR, 2015). The MWELO requires that the annual estimated total water use for landscape irrigation and water features does not exceed the MAWA (DWR, 2015). As shown below, the MAWA is calculated based on the regional reference evapotranspiration rate, an evaporation adjustment factor, the total landscaped area, and the area of "special landscaped area."[3] Water use for the Proposed Project landscaping irrigation has been conservatively assumed to be equal to the MAWA, which is the upper limit of annual applied water for established landscaped areas and water features.

[3] Special Landscaped Area includes landscaping dedicated solely to edible plants, recreational areas, areas irrigated with recycled water, or water features using recycled water. There is no Special Landscape Area associated with the Proposed Project (KPFF, 2023b).

The MAWA is calculated using the following equation:

$$MAWA = ETo \times [(ETAF \times LA) + (1\text{-}ETAF) \times SLA]$$

where:

ETo	=	The regional reference evapotranspiration rate
ETAF	=	Evapotranspiration Adjustment Factor For parks (SLAs) = 1.0 For non-residential landscape corridors = 0.45 For residential landscaping = 0.55 For water features = 1
LA	=	Total landscape area (including SLA)
SLA	=	Special Landscape Area

Based on the above methodology, and shown in **Table 2,** the total annual water demands for the Proposed Project's landscaping and water features are estimated to be 1.8 AFY and 0.11 AFY, respectively, at full buildout (excluding the distribution system losses discussed in Section 4.4).

4.4 Distribution System Losses

Water distribution systems experience a degree of water loss over the course of transmission from the source to the customer. Although distribution system losses from the newly constructed portion of the system's infrastructure associated with the Proposed Project would initially be expected to be minimal, it is conservatively assumed that distribution system losses associated with delivering water for the Proposed Project will ultimately be consistent with the proportion of real and apparent water loss per the most recent (2021) validated water loss audit submitted to DWR for the GSWC Culver City service area (i.e., 4.8%; DWR, 2021). It should be noted that while these real losses represent a demand on the system, water lost through the distribution system returns to the underlying groundwater basin and thus is not a true demand on the groundwater supply. However, for purposes of this WSA, all water loss is conservatively considered a demand. **Table 1** shows the distribution system losses for the Proposed Project, estimated at a total of 5.2 AFY at full buildout.

4.5 Existing Current Water Demand on the Proposed Project Site

The Proposed Project site is currently developed with several commercial and office buildings, with one building having been vacant for the past year (Hudson Pacific Properties, 2023b). From 2020 to 2023, water use at the Proposed Project site averaged 3.8 AFY, with a maximum annual use over this period of 5.6 AFY (Hudson Pacific Properties, 2023c).[4] Water demand for the new

[4] At the time of preparing this WSA, historical water usage data for the first four months of 2020 and the last month of 2023 were unavailable. For purposes of this analysis, the monthly average water use data from 2021 was used to approximate the water use for the first four months of 2020 in order to estimate the total annual water use at the site in 2020. The water use data for the last month in 2023 was not approximated in the average historical site use calculation as it was expected to be minimal.

development associated with the Proposed Project is conservatively assumed incremental to this existing demand, and thus, as shown in **Table 1**, the average existing site demand of 3.8 AFY is subtracted from the estimated demands associated with the Proposed Project.

4.6 Total Proposed Project Water Demand

Based on the above methodologies and assumptions, the total annual water demand associated with the Proposed Project at full buildout and occupancy is conservatively estimated to be 104 AFY, as shown in **Table 1**.

Table 1

Summary of Estimated Incremental Annual Project Water Demand

10950 Washington Boulevard, Culver City, California

Land Use	Land Use at Full Buildout (a)	Land Use Units	Water Demand Factor (b)	Water Demand Factor Units	Total Water Demand (AFY) (c)				
					2025	2030	2035	2040	2045
Residential Units (d)	508	du	173	gpd/du	0	99	99	99	99
Food Services (e)	14,087	sq ft	0.11	gpd/sq ft	0	1.8	1.8	1.8	1.8
Covered Parking (f)	269,421		0.020	gal/sq ft/cleaning	0	0.20	0.20	0.20	0.20
Community Pools and Spa	1,305		(g)		0	0.11	0.11	0.11	0.11
Irrigated Landscaping	39,980				0	1.8	1.8	1.8	1.8
Distribution System Losses	--	--	(h)		0	5.2	5.2	5.2	5.2
Existing Site Demand	--	--	(i)		0	-3.8	-3.8	-3.8	-3.8
Net Annual Water Demand (j)					**0**	**104**	**104**	**104**	**104**

Abbreviations:

"AFY" = acre-feet per year
"du" = dwelling unit
"gal" = gallons
"gpd" = gallons per day
"LACSD" = Los Angeles County Sanitation District
"MWELO" = Model Water Efficient Landscape Ordinance
"Proposed Project" = 10950 Washington Boulevard
"sq ft" = square feet
"WSA" = Water Supply Assessment

Notes:

(a) Estimated land use square footages for food services and residential units per Reference 1, for the covered parking and irrigated landscaping per Reference 2, and for the residential community pools and spas per Reference 3.

(b) Water demand factors for covered parking per Reference 4. Water demand factors for the residential units and food services were calculated based on wastewater generation factors per Reference 5. Wastewater generation factors per Reference 5 were provided by the LACSD and represent the average wastewater flow factor for each land use. For the purpose of this analysis, wastewater flows are assumed to be 90% of the total water demand for each land use consistent with the methodology used in the Paramount Pictures Master Plan, which was approved by the City of Los Angeles in April 2016 per Reference 6 and Reference 7. Therefore, flow factors provided in Reference 5 were divided by 0.9 to determine the water demand factors for residential unit and food service uses.

(c) The estimated completion date for the Proposed Project is 2030 per Reference 8.

(d) Residential units for the Proposed Project include 239 one bedroom apartments, 178 two bedroom apartments, and 91 studio apartments per Reference 1.

(e) "Food Services" include a grab and go market and coffee shop per Reference 8.

(f) Water use associated with the covered parking is anticipated to be minimal, limited to cleaning of the facility. For purposes of this WSA, it is assumed that the covered parking will be cleaned twelve times per year and that 0.02 gal/sq ft will be used per each cleaning event, per Reference 4.

Table 1

Summary of Estimated Incremental Annual Project Water Demand

10950 Washington Boulevard, Culver City, California

(g) Estimates of the landscape irrigation and community pool and spa water demands are based on MWELO calculations for Estimated Total Water Use per Reference 9. See Table 2 for the MWELO calculations.

(h) Estimated distribution system water loss associated with delivery of water to the Proposed Project is based on a rate of 4.8% per Reference 10 and includes both real and apparent losses.

(i) Existing site demands per Reference 11. Existing demands are subtracted from total projected water demands to show the incremental increase in demands associated with the Proposed Project (i.e., net increase in water demand). Existing demands are estimated as the average of the last four years of water use at the project site based on available metered data (2020-2023). At the time of preparing this WSA, historical water usage data for the first four months of 2020 and the last month of 2023 were unavailable. For purposes of this analysis, the monthly average water use data from 2021 was used to approximate the water use for the first four months of 2020 in order to estimate the total annual water use at the site in 2020. The water use data for the last month in 2023 was not approximated in the average historical site use calculation as it was expected to be minimal.

(j) Totals may not sum due to rounding.

5 GSWC CULVER CITY SERVICE AREA WATER DEMAND

☑ ***CWC § 10910 (c)***

(1) The city or county, at the time it makes the determination required under Section 21080.1 of the Public Resources Code, shall request each public water system identified pursuant to subdivision (b) to determine whether the projected water demand associated with a proposed project was included as part of the most recently adopted urban water management plan adopted pursuant to Part 2.6 (commencing with Section 10610).

(2) If the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f), and (g).

(3) If the projected water demand associated with the proposed project was not accounted for in the most recently adopted urban water management plan, or the public water system has no urban water management plan, the water supply assessment for the project shall include a discussion with regard to whether the public water system's total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses.

Consistent with the UWMP Act (CWC §10610-10656), the 2020 UWMP presents estimates of projected future water demand for the GSWC Culver City service area in five-year increments, between the years 2025 and 2045 (GSWC, 2021). Projected water demand is subdivided between the following seven customer sectors or use types: (1) single family, (2) multi-family, (3) commercial/institutional, (4) industrial, (5) landscape, (6) other, and (7) water loss. As discussed further below, the 2020 UWMP demand projections account for: (1) demands for the existing service area and accounts, (2) projected growth based on historical growth in accounts, and (3) all anticipated new development based on information then available to GSWC.

5.1 Current and Historical Water Demand Within the GSWC Culver City Service Area

Historical water demand within the GSWC Culver City service area from 2016 through 2022 is shown in **Table 3**. Based on 2020 water use, the single-family residential and commercial/institutional sectors use the most water, at 34% and 33%, respectively, followed by multi-family residential at 23%. Industrial and "other" uses represent just 2.4% and 2.9% of water use, and distribution system losses represent 5.3% of the service area's water demand (GSWC, 2021). Between 2016 and 2022, water demands remained fairly stable, averaging 4,819 AFY (DWR, 2024; GSWC, 2021).

5.2 GSWC Culver City Service Area Demand Projections

The 2020 UWMP water demand projections account for growth within the GSWC Culver City service area through 2045. The 2020 UWMP includes population growth estimates based on Southern California Association of Governments (SCAG) projections. Based on a review of historical growth in accounts and the SCAG projected population and employment, GSWC

projected the growth in accounts by sector within the Culver City service area and applied unit demand factors for each customer category to estimate future demands.

As shown in **Appendix B,** based on a review of the GSWC Culver City service area growth projections, GSWC has confirmed that the water demands associated with the Proposed Project's commercial and landscape uses and corresponding water distribution losses are within the anticipated growth for the GSWC Culver City service area. Thus, this WSA can assume that the demands for these project elements (approximately 4.0 AFY) were included in the 2020 UWMP for the GSWC Culver City service area, consistent with CWC §10910(c)(1) (GSWC, 2024).

However, per **Appendix B**, GSWC has confirmed the water demands associated with the Proposed Project's multi-family residential use and corresponding water distribution losses are not included in the growth anticipated within the GSWC Culver City service area. Thus, this WSA assumes that the demands for these project elements (approximately 100 AFY after subtracting the average existing site demand of 3.8 AFY) are additive to 2020 UWMP demands (GSWC, 2024).

The demand projections for the GSWC Culver City service area, including the Proposed Project's additive demands, are presented in **Table 4** by water use sector in five-year increments through 2045. It is estimated that, inclusive of the Proposed Project, the total annual water demand for the GSWC Culver City service area will be approximately 5,605 AFY in 2045.

5.3 Planned Development Projects Within the GSWC Culver City Service Area

As discussed above, the 2020 UWMP demand projections include projections of growth within the existing service area based on historical account growth and SCAG population and employment forecasts, which included the demand associated with the Crossings Campus Building 1 Project (Crossings Project), a planned development for which a WSA was completed in 2022. The Crossings Project includes a 167,000 sq ft four-story office building with associated landscaping and covered parking. The demands associated with the Crossings Project are estimated to be 24 AFY by full buildout in 2025. The Crossings Project is considered to be included within GSWC Culver City service area's growth projections and the 2020 UWMP demand projections (EKI, 2022).

Additionally, the 5757 Uplander Way mixed-use residential development is a known project within the GSWC Culer City service area for which a WSA is currently being prepared. The 8.3 acre-site would include the construction of 1,077 multi-family units, just under 9,000 sq ft of lobby space, approximately 6,000 sq ft of fitness center space, and an approximately 5,000 sq ft restaurant (EKI, 2024). The draft WSA determined that the demands associated with the commercial and landscaping uses, approximately 11 AFY by full buildout, are included in the 2020 UWMP demand projections. However, the draft WSA determined that the estimated demands associated with the multi-family residential uses are not included in the 2020 UWMP demand projections for GSWC Culver City (135 AFY). Therefore, the preliminary projected multi-family residential demands that are considered additive to GSWC Culver City's projected demands are shown in **Table 4**.

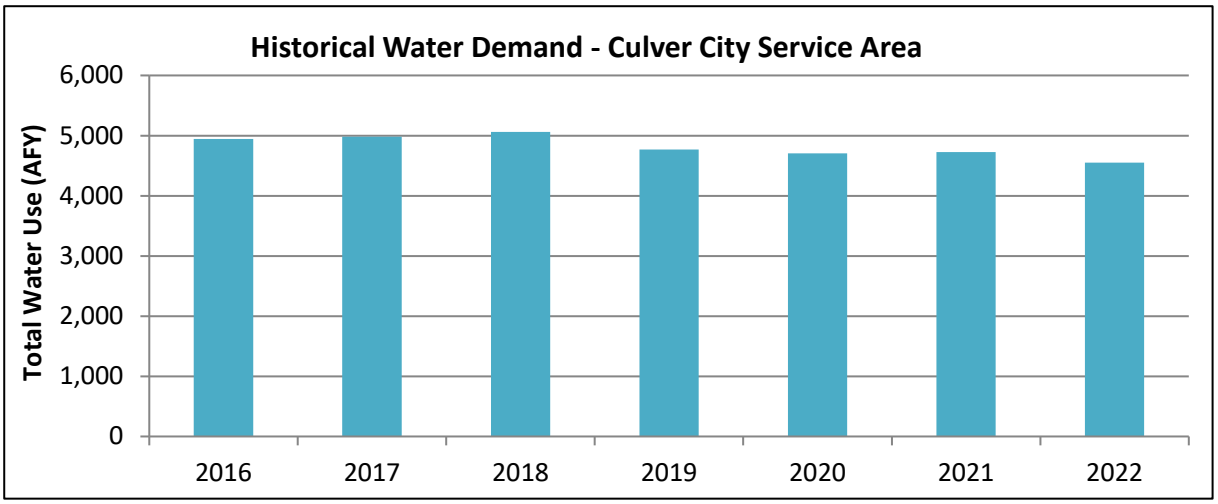
This WSA understands that GSWC tracks future planned water uses through service applications that it receives for new developments and has determined that all currently planned water uses, except for the multi-family residential demands and corresponding water losses associated with the 5757 Uplander Way development and the Proposed Project, are accounted for in its 2020 UWMP.

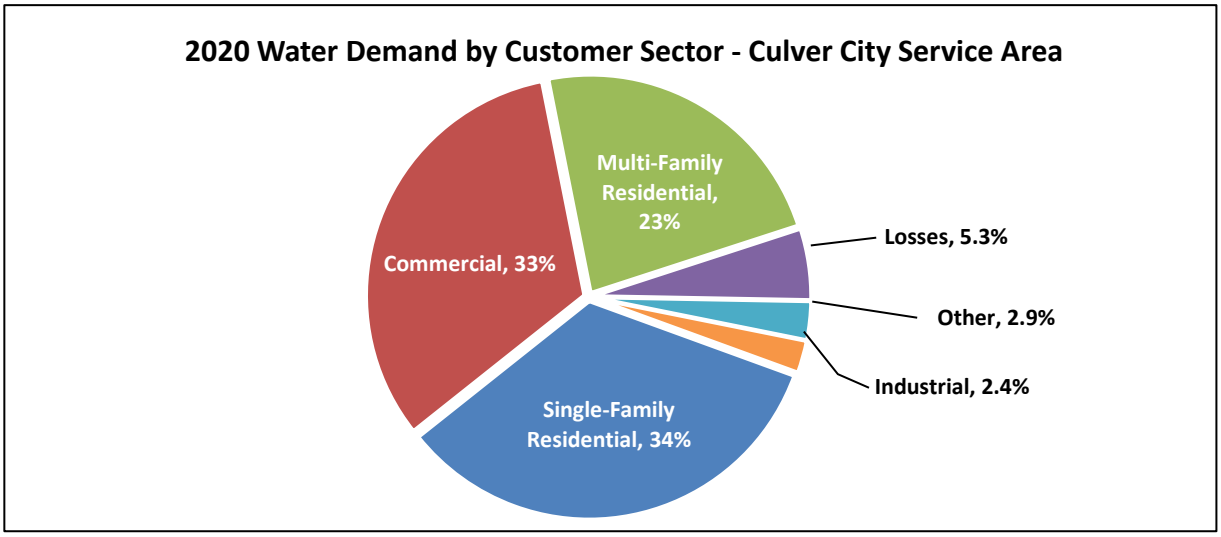
Table 3

Historical Water Demand for GSWC Culver City Service Area

10950 Washington Boulevard, Culver City, California

	Historical Water Demand (AFY) (a)						
	2016	**2017**	**2018**	**2019**	**2020**	**2021**	**2022**
Water Demand	4,942	4,982	5,061	4,767	4,707	4,726	4,551





Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

Notes:

(a) Historical water demands from 2016-2020 per Reference 1, and for 2021 and 2022 per Reference 2. The 2020 water use by customer sector was provided in Reference 1.

References:

1. GSWC, 2021. 2020 Urban Water Management Plan, Culver City Service Area, prepared by Tully & Young Comprehensive Water Planning and Zanjero, dated June 2021.
2. DWR, 2024. State Water Resources Control Board Water Conservation and Production Reports website, accessed 10 January 2024.

Table 4

Projected Future Water Demand for GSWC Culver City Service Area

10950 Washington Boulevard, Culver City, California

Customer Category	Projected Annual Water Demand (AFY)				
	2025	2030	2035	2040	2045
GSWC Culver City Service Area Demand (a)					
Single-Family Residential	1,508	1,514	1,520	1,525	1,531
Multi-Family Residential	1,051	1,064	1,077	1,090	1,103
Commercial	1,897	1,933	1,969	2,006	2,044
Industrial	156	159	161	164	166
Landscape	142	165	192	223	259
Other	0	0	0	0	0
Losses (Non-Revenue Water)	247	251	256	260	265
Total GSWC Culver City Service Area Projected Water Demand (b)	**5,002**	**5,086**	**5,175**	**5,269**	**5,370**
Other Known Developments Additive Demand (c)					
Total Additive Demand from Other Known Developments	**0**	**103**	**135**	**135**	**135**
Proposed Project Additive Demand (d)					
Multi-Family Residential	0	99	99	99	99
Losses (e)	0	4.9	4.9	4.9	4.9
Existing Site Demand	0	-3.8	-3.8	-3.8	-3.8
Total Proposed Project Additive Demand	**0**	**100**	**100**	**100**	**100**
Total GSWC Culver City Service Area Water Demand Inclusive of the Proposed Project	**5,002**	**5,288**	**5,410**	**5,504**	**5,605**

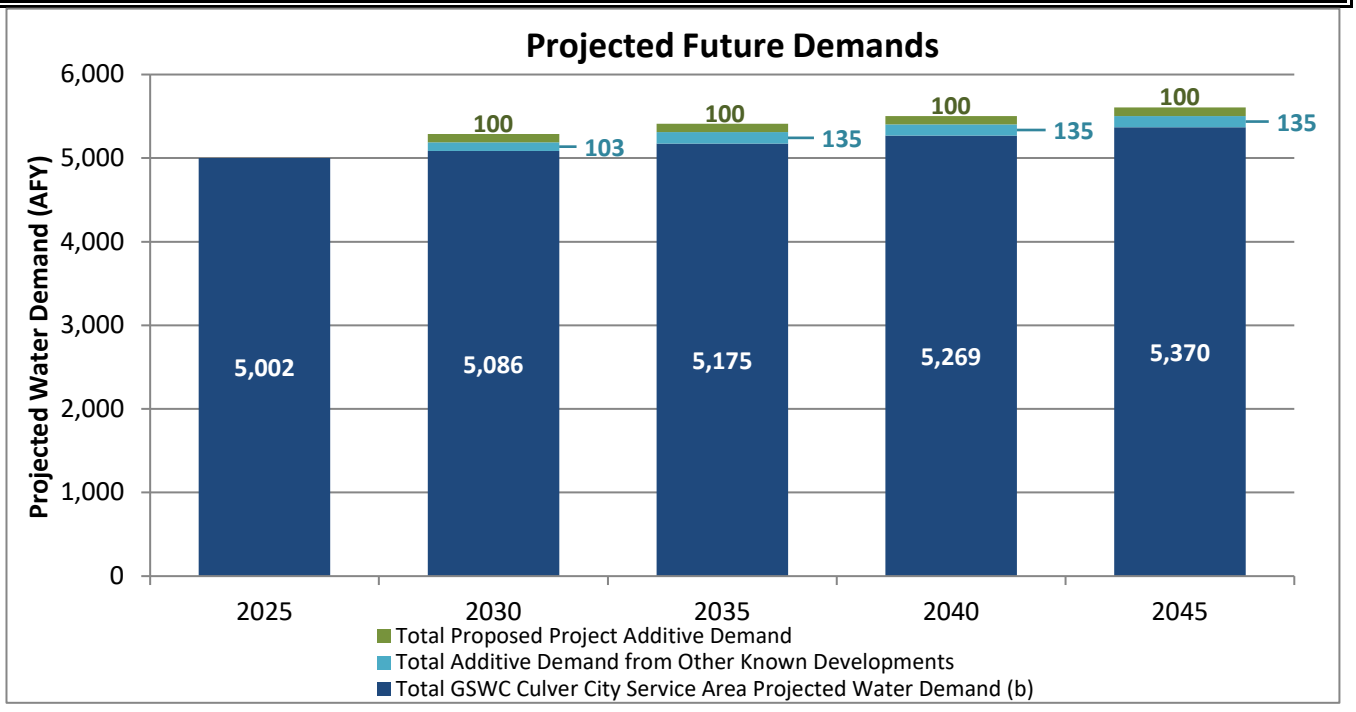


Table 4

Projected Future Water Demand for GSWC Culver City Service Area

10950 Washington Boulevard, Culver City, California

Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

"UWMP" = Urban Water Management Plan

"Proposed Project" = 10950 Washington Boulevard

Notes:

(a) The projected water demands by sector for the GSWC Culver City Service Area are provided in the 2020 UWMP per Reference 1.

(b) Total may not sum due to rounding.

(c) Another known development is the 5757 Uplander Way Project. The demands associated with the 5757 Uplander Way Project mixed-use residential development per Reference 2 are preliminary and are currently in the process of being updated. A portion of the total project's draft projected demands (shown in the table above) are considered additive to GSWC's growth.

(d) Commercial and landscape demands for the Proposed Project, as well as the corresponding water losses, are within the growth anticipated by GSWC and therefore, are included in the GSWC Culver City Service Area 2020 UWMP. However, the Proposed Project's multi-family residential demands and the corresponding water losses were not included within the projected growth in the 2020 UWMP. Therefore, these demands are additive to those in the 2020 UWMP, as confirmed through correspondence with GSWC per Reference 3.

(e) Distribution losses associated with the Proposed Project's multi-family residential demands are proportional to the Proposed Project's total distribution system losses in Table 1.

6 GSWC CULVER CITY SERVICE AREA WATER SUPPLY

This section identifies the water supplies for the GSWC Culver City service area and discusses the variability of the different supplies based on drought and other factors affecting water supply reliability. The Proposed Project will be served potable water by GSWC, which primarily relies on imported water purchased from the West Basin Municipal Water District (WBMWD), although GSWC has previously extracted a minimal amount of groundwater from the Santa Monica Subbasin (GSWC, 2021).

6.1 Identification of Water Supply Rights

☑ ***CWC § 10910 (d)(1)***

The assessment required by this section shall include an identification of any existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and a description of the quantities of water received in prior years by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), under the existing water supply entitlements, water rights, or water service contracts.

Pursuant to CWC §10910(d)(1), a WSA is required to include identification of all water supply entitlements, water rights, and water service contracts relevant to the identified water supply for the Proposed Project. In accordance with these requirements, this WSA includes a summary of GSWC's water supply sources for the GSWC Culver City service area.

6.2 Purchased Water

GSWC purchases water for the GSWC Culver City service area from WBMWD. The water purchased from WBMWD may be managed and moved between the GSWC Culver City service area and GSWC Southwest service area, depending upon the circumstances for supply availability in each particular service area (GSWC, 2021).

GSWC entered into a five-year purchase order agreement between GSWC and WBMWD, effective 1 January 2008 through 31 December 2012. The agreement was extended an additional two years to 31 December 2014. This agreement provided GSWC with an annual maximum allocation of 30,651 AFY with a total purchase commitment of 91,953 AF over the five-year term of the agreement, shared by all of GSWC's systems served by WBMWD. At this time, this agreement has not been extended (WBMWD, 2024).

WBMWD is a member agency of the Metropolitan Water District of Southern California (MWD). WBMWD acts as secondary wholesale water agency, purchasing water from MWD and reselling it to GSWC. WBMWD entered into a new ten-year term purchased order with MWD effective 1 January 2015 through 31 December 2024 (WBMWD, 2021). At this time, no new purchase order agreement has been made between WBMWD and MWD past 31 December 2024 (WBMWD, 2024).

MWD supplies imported water sourced from the State Water Project (SWP) and the Colorado River via a series of pipelines and aqueducts. The Colorado River was MWD's original source of water following its establishment in 1928. MWD has a legal entitlement to receive water from the Colorado River under a permanent service contract with the United States Secretary of the Interior. The Colorado River Aqueduct, which has a capacity of 1.25 million AFY, is owned and operated by MWD. It transports water from Lake Havasu, at the border of California and Arizona, approximately 242 miles west to its terminus at Lake Mathews in Riverside County and MWD's service area (WBMWD, 2021).

MWD also imports water from the SWP, which is owned by the State of California and operated by DWR. The SWP transports Feather River water stored in and released from Oroville Dam and conveyed through the San Francisco Bay and Sacramento-San Joaquin River Delta (Bay-Delta), as well as unregulated flows diverted directly from the Bay-Delta, south via the California Aqueduct to four delivery points: one from the California Aqueduct's West Branch at Castaic Lake and three from the East Branch along the northeastern portion of MWD's service area between Devil's Canyon Power Plant and Lake Perris (WBMWD, 2021).

MWD continuously engages in planning for various aspects of its water management, including operations, long-term reliability, and emergency response. These planning efforts include: (1) the 1996 Integrated Water Resources Plan (IRP) and its three updates in 2004, 2010, and 2015; (2) the 2020 IRP (currently in development); (3) the Water Shortage Contingency Plan (WSCP); (4) the Water Surplus and Drought Management (WSDM) Plan; (5) the Water Supply Allocation Plan (WSAP); (6) the Emergency Storage Objective; and (7) the Seismic Risk Assessment and Mitigation Plan. Collectively, they provide a policy framework, operating guidelines, and resource targets for MWD to ensure regional water supply reliability (MWD, 2022; WBMWD, 2021).

The IRP is MWD's evolving long-term plan to assure adequate water supplies for Southern California. The first IRP was adopted in 1996 to address the complexity of developing, maintaining, and delivering water to meet changing demands in the face of growing challenges. This version of the IRP was last updated in 2015 and detailed a series of reliability goals, approaches, and targets for each of their water resource areas, with some focus on maintaining existing capabilities and increasing net quantities over the 25-year planning horizon (MWD, 2016). The 2015 IRP identified the following goals:

- Maintain Colorado River Aqueduct supplies;
- Stabilize State Water Project supplies;
- Achieve additional conservation savings; and
- Develop and protect local water supplies.

MWD published annual implementation reports on its progress towards the 2015 IRP goals. The most recent Implementation Report (2019) highlighted the progress on achieving the resource and reliability goals established in the 2015 IRP as follows:

- MWD worked closely with other agencies to improve the reliability of its imported water supplies. MWD led efforts in crafting the Lower Colorado River Basin Drought Contingency Plan and supported efforts to make the Delta more resilient and support Governor Newsom's direction to advance a single tunnel solution in the Delta.
- MWD continued to support and encourage local supply development through the Local Resources Program. MWD's board approved three projects with a total contract yield of 3,660 AFY from January 2019 to October 2019. As of October 2019, seven additional applications for a total of 116,580 AFY were under consideration. MWD was also assessing the water supply benefits from stormwater through pilot programs.
- MWD continued to inform residents of water use efficiency through its ongoing advertising campaigns and education. In addition to rebates for water efficient fixtures, MWD also implemented programs targeting outdoor conservation with its landscape education and turf replacement programs. In 2019, MWD's Board of Directors (Board) approved a conservation initiative that focuses on reaching disadvantaged communities (MWD, 2019).

In 2020, MWD initiated a new IRP process with a fresh approach, looking at multiple scenarios that could play out in the future and how MWD could respond to maintain water reliability for the region. The 2020 IRP is a two-phase process including a Regional Needs Assessment (Phase 1) and a One Water Implementation phase (Phase 2). The Regional Needs Assessment was completed and adopted by the MWD Board in April 2022, and includes the analysis of regional needs under a range of scenarios: (1) Scenario A, low demand and stable imports; (2) Scenario B, high demand and stable imports; (3) Scenario C, low demand and reduced imports; and (4) Scenario D, high demand and reduced imports (MWD, 2022). The Regional Needs Assessment found plausible reliability outcomes by the year 2045, with potential shortages ranging from no net shortage at all under Scenario A to as high as 1.2 million AF under Scenario D, and identifies needs and opportunities related to five focus areas: (1) SWP dependent areas; (2) storage; (3) retail demand/ demand management; (4) MWD imported supplies; and (5) local supply. The Regional Needs Assessment concludes that:

> *Collectively, these findings instill a sense of optimism about Southern California's water future. Metropolitan has identified the tools necessary to adapt to a variety of plausible futures successfully. It is also well within Southern California's control to avoid a fate with increased per-capita water use and higher demands that would prove unsustainable.*

The Regional Needs Assessment further notes that through the One Water Phase of the process:

> *The precise combination of actions will emerge as more is known about the future that we actually face. Southern California is poised to be agile enough to adjust its portfolio of water actions to keep up with our changing times.*

Completion of Phase 1 launched the beginning of the One Water Implementation (Phase 2). This phase, which is ongoing, involves collaboration between MWD's Board, member agencies, and interested parties to establish a joint process for monitoring key reliability indicators, develop a coordinated approach to regional problems and resource needs identified in Phase 1, and create an adaptive management strategy (MWD, 2022).

While MWD coordinates regional supply planning through its inclusive IRP process, MWD's member agencies also conduct their own planning analyses, including their own urban water management plans, and may develop projects independently of MWD (MWD, 2022; WBMWD, 2021).

6.3 Groundwater Supply

☑ ***CWC § 10910 (f)***

If a water supply for a proposed project includes groundwater, the following additional information shall be included in the water supply assessment:

(1) A review of any information contained in the urban water management plan relevant to the identified water supply for the proposed project.

(2)(A) A description of any groundwater basin or basins from which the proposed project will be supplied.

(B) For those basins for which a court or the board has adjudicated the rights to pump groundwater, a copy of the order or decree adopted by the court or the board and a description of the amount of groundwater the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has the legal right to pump under the order or decree.

(C) For a basin that has not been adjudicated that is a basin designated as high- or medium-priority pursuant to Section 10722.4, information regarding the following:

(i) Whether the department has identified the basin as being subject to critical conditions of overdraft pursuant to Section 12924.

(ii) If a groundwater sustainability agency has adopted a groundwater sustainability plan or has an approved alternative, a copy of that alternative or plan.

(D) For a basin that has not been adjudicated that is a basin designated as low- or very low priority pursuant to Section 10722.4, information as to whether the department has identified the basin or basins as overdrafted or has projected that the basin will become overdrafted if present management conditions continue, in the most current bulletin of the department that characterizes the condition of the groundwater basin, and a detailed description by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), of the efforts being undertaken in the basin or basins to eliminate the long-term overdraft condition.

(3) A detailed description and analysis of the amount and location of groundwater pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), for the past five years from any groundwater basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(4) A detailed description and analysis of the amount and location of groundwater that is projected to be pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), from any basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(5) An analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project. A water supply assessment shall not be required to include the information required by this paragraph if the public water system determines, as part of the review required by paragraph (1), that the sufficiency of groundwater necessary to meet the initial and projected water demand associated with the project was addressed in the description and analysis required by paragraph (4) of subdivision (b) of Section 10631.

As shown in **Figure 3**, the majority of the GSWC Culver City service area overlies the Santa Monica Subbasin of the Los Angeles Basin (DWR Basin No. 4-011.01; referred to as "Santa Monica Subbasin" or "Subbasin").[5]

In 2020, 0.1 AF of groundwater pumped from the Santa Monica Subbasin was used by the GSWC Culver City service area (**Table 5**). However, GSWC does not anticipate using groundwater to meet demands for the Proposed Project or the rest of its GSWC Culver City service area within the 2045 planning horizon (GSWC, 2021; GSWC, 2022a). Per the 2020 UWMP, while the GSWC Culver City service area has not relied upon groundwater to serve its customers over the last few years, GSWC maintains a well and may institute potential service from the Subbasin in the future upon completion of the Santa Monica Groundwater Subbasin GSP and implementing actions. Although groundwater is not currently anticipated to supply the Proposed Project, details regarding the Subbasin pursuant to CWC §10910(f) are provided below given the possibility that groundwater could be utilized in the future.

6.3.1 Basin Description

The following is a description of the groundwater basin from which the Proposed Project could be supplied, if GSWC uses its well in the future. The discussion is based on review of relevant information contained within the GSWC Culver City service area 2020 UWMP and the Santa Monica Groundwater Subbasin GSP (GSWC, 2021; SMBGSA, 2022).

The Santa Monica Subbasin comprises the northwestern part of the Coastal Plain of Los Angeles Groundwater Basin. It is bounded by impermeable rocks of the Santa Monica Mountains on the north and by the Ballona escarpment on the south. The Subbasin extends from the Pacific Ocean on the west to the Inglewood fault on the east. Ballona Creek is the dominant hydrologic feature and drains surface waters to the Pacific Ocean. The Subbasin is bounded to the south by the West Coast Subbasin and to the east by the Hollywood and Central Subbasins.

Holocene age alluvium forms much of the surficial deposits for the central part of the Subbasin and fills the Ballona gap, an erosional channel cutting into and across the Inglewood fault. These deposits include the clay-rich Bellflower aquiclude and underlying gravels of the Ballona aquifer. Late Pleistocene alluvial sediments form much of the elevated plateau areas in the Subbasin and include older dune sands and the Lakewood Formation. The Lakewood Formation includes thin coarse-grained laterally discontinuous units in the Subbasin, not contiguous with the named aquifers of the Lakewood Formation elsewhere in the Los Angeles Basin. In general, groundwater supply wells are not screened within the Lakewood Formation. The Silverado aquifer within the early Pleistocene age San Pedro Formation is the main productive unit in the Subbasin in which the majority of the groundwater production wells in the basin are screened. Water bearing units

[5] Small portions of the GWSC Culver City service area also overly the Central and West Coast Subbasins (DWR 4-011.04 and DWR 4-011.03, respectively). However, GSWC's Culver City service area well is located within the Santa Monica Subbasin.

below the San Pedro Formation include the Pliocene marine sediments of the Pico Formation, which are not widely produced.

The primary source of recharge to the Silverado aquifer (the primary productive unit within the Subbasin) is mountain front recharge from the Santa Monica Mountains to the north the Subbasin. The Subbasin is highly urbanized and little recharge occurs via direct infiltration of precipitation in the Subbasin boundaries.

Primary sources of groundwater discharge from the Santa Monica Subbasin include groundwater production wells. Groundwater in the Santa Monica Subbasin moves mainly southward toward the Ballona gap, then flows toward to the ocean. Under normal water level conditions, underflows are expected from the Santa Monica Subbasin to the West Coast Subbasin in the south. Relatively minor amounts of underflows are expected across the eastern boundary with the Hollywood and Central Subbasins or the western boundary with the ocean.

6.3.2 Basin Status

Pursuant to CWC §10910f(2)(C), the Santa Monica Subbasin is not adjudicated and, in its recent evaluation of California groundwater basins, DWR determined that the Santa Monica Subbasin was not in a condition of critical overdraft (DWR, 2022).

The Santa Monica Subbasin is, however, designated as a medium priority basin under DWR's 2019 Phase 2 Basin Prioritization (DWR, 2019). The main factors driving this designation include Population (5 out of 5 possible points), Population Growth (3 out of 5 possible points), and Total Wells (3 out of 5 possible points). Additional factors include Groundwater Reliance (2.5 out of 5 possible points), Public Supply Wells (2 out of 5 possible points), and Impacts (2 out of 5 possible points) (DWR, 2022).

As discussed in the Santa Monica Groundwater Subbasin GSP, a very small portion on the southern coastal edge of the Santa Monica Subbasin overlaps the adjudicated area of the West Coast Subbasin (DWR 4-011.03). GSWC's groundwater well is located outside of this area, and thus the adjudication does not impact potential groundwater use by the GSWC Culver City service area. Additional information on this adjudicated area is provided in the Santa Monica Groundwater Subbasin GSP (SMBGSA, 2022).

6.3.3 SGMA Groundwater Management

In 2014, the California State Legislature enacted the Sustainable Groundwater Management Act (SGMA) with subsequent amendments in 2015. SGMA requires the formation of Groundwater Sustainability Agencies (GSAs) and the development and implementation of GSPs for groundwater basins that are designated by DWR as medium or high priority. As a medium priority, non-critically overdrafted and non-adjudicated basin (see previous discussion), the Subbasin is subject to the requirements of SGMA, including the requirement to be covered by one or more GSAs and to prepare and submit to DWR one or more GSPs by 31 January 2022.

Per the Santa Monica Groundwater Subbasin GSP, the Santa Monica Basin Groundwater Sustainability Agency (SMBGSA) was formed in 2017. The five member agencies of the SMBGSA include the City of Santa Monica, the City of Beverly Hills, the City of Los Angeles (by and through its Department of Water and Power), the City of Culver City, and the County of Los Angeles. The five member agencies signed a Memorandum of Understanding for the formation of the SMBGSA in May 2017.

The Santa Monica Groundwater Subbasin GSP was submitted to DWR in 2022 and approved on 26 October 2023. DWR has recommended Corrective Actions to be addressed in the 2027 five-year GSP update. The GSP and DWR's Determination Letter can be found on the DWR SGMA Portal: https://sgma.water.ca.gov/portal/gsp/preview/129. This GSP and subsequent updates will govern groundwater use within the Subbasin going forward.

6.4 Recycled Water

Recycled water is not currently served to customers within the GSWC Culver City service area and is not expected to supply the Proposed Project. It is noted, however, that wastewater generated within the service area is treated by the City of Los Angeles, and a portion of that treated wastewater is sold to WBMWD for further treatment for recycled water uses throughout the WBMWD service area (GSWC, 2021). Although the GSWC Culver City service area does not directly utilize recycled water, its customers contribute to the regional water supply reliability benefit achieved through WBMWD's distribution of recycled water.

6.5 Total Projected Potable Supply in Normal, Single Dry, and Multiple Dry Years

As discussed above, water purchased from WBMWD constitutes the primary source of supply for the GSWC Culver City service area historically and is expected to be the sole source of supply within the 2045 planning horizon (GSWC, 2021). The WBMWD 2020 UWMP states that it will be able to serve 100% of projected demands in normal, single-dry and multiple-dry years (WBMWD, 2021). Because of this, GSWC expects that under all hydrologic conditions purchased water supplies will fully meet future purchased water demands included in the GSWC 2020 UWMP. Additionally, GSWC has confirmed that is has the ability to purchase additional water from WBMWD to meet the additive demands of the Proposed Project associated with the multi-family residential use and corresponding distributional water loss (GSWC, 2024).

Therefore, the available supplies to the GSWC Culver City service area are considered to be equal to GSWC 2020 UWMP demands plus the additive demands of the Proposed Project under all conditions (i.e., current and projected, and for normal, single dry, and multiple dry years including a five-year drought period).

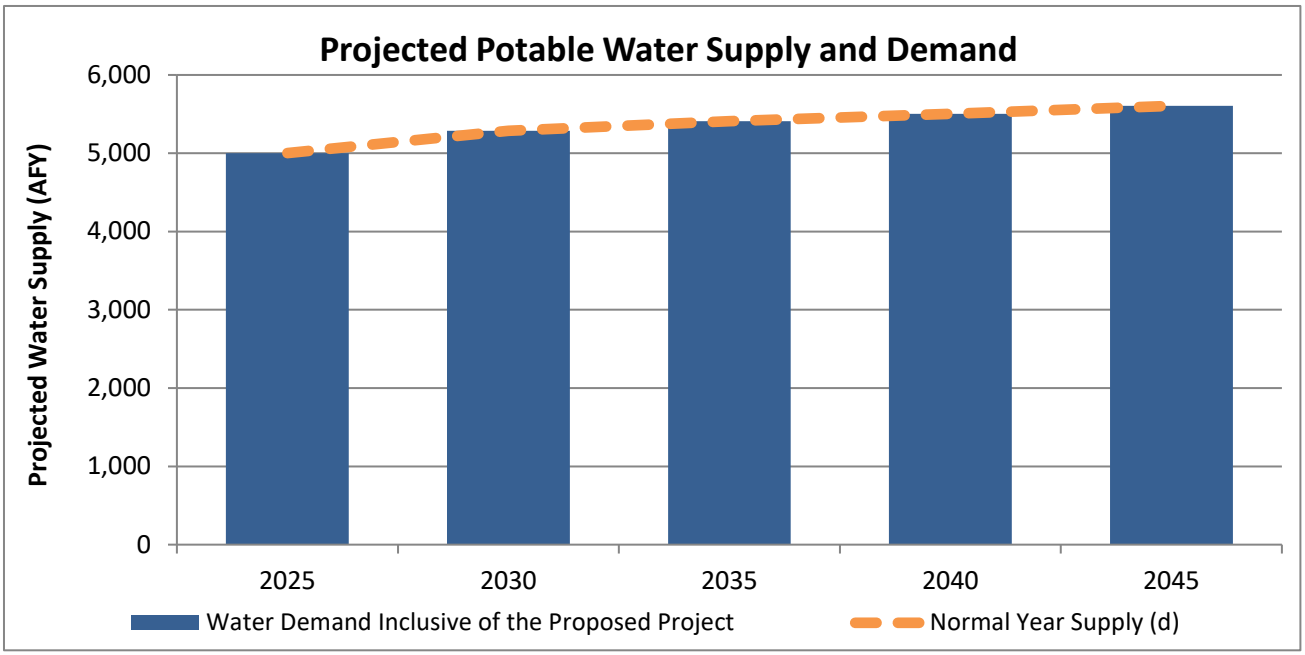
The total projected potable supplies for the GSWC Culver City service area for normal, single dry, and multiple dry years are presented in **Tables 6**, **7**, and **8**.

Table 6

Projected Normal Year Water Supply and Demand for GSWC Culver City Service Area

10950 Washington Boulevard, Culver City, California

Water Demand and Supply	Projected Normal Year Supply and Demand (AFY)				
	2025	2030	2035	2040	2045
Water Demand Inclusive of the Proposed Project	5,002	5,288	5,410	5,504	5,605
GSWC Culver City Service Area Normal Year Demand (a)	5,002	5,086	5,175	5,269	5,370
Other Known Developments' Additive Demand (b)	0	103	135	135	135
Proposed Project Additive Demand (c)	0	100	100	100	100
Normal Year Supply (d)	5,002	5,288	5,410	5,504	5,605
Supply Shortfall (% demand)	***None***	***None***	***None***	***None***	***None***



Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

"Proposed Project" = 10950 Washington Boulevard

"UWMP" = Urban Water Management Plan

"WBMWD" = West Basin Municipal Water District

"WSA" = Water Supply Assessment

Notes:

(a) The projected normal year water demands for the GSWC Culver City Service Area are provided per Reference 1.

(b) Additive demands associated with other known developments in the GSWC Culver City Service Area include the draft demands associated with the 5757 Uplander Way Project, per Reference 2.

(c) As discussed in Section 5 of this WSA and as shown in Table 4, the demands associated with the Proposed Project's multi-family residential use and corresponding distributional losses are not included within the GSWC Culver City Service Area's 2020 UWMP projections.

(d) Per Reference 2 and Reference 3, GSWC confirmed ability to purchase water from WBMWD as needed to meet demands. As such, the normal year supplies available to GSWC are equal to the projected demands in the 2020 UWMP plus the additive demands of the Proposed Project and the draft additive demands of the 5757 Uplander Way Project.

Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

"Proposed Project" = 10950 Washington Boulevard

"UWMP" = Urban Water Management Plan

"WBMWD" = West Basin Municipal Water District

"WSA" = Water Supply Assessment

Notes:

(a) While WSA regulations only require an analysis of a three-year drought scenario, UWMP regulations were updated in 2018 to include a five-year drought scenario (California Water Code §10635), Therefore, a five-year drought scenario is presented here.

(b) The projected multiple dry year water demands for the GSWC Culver City Service Area are provided per Reference 1.

(c) Demands associated with other known developments in the GSWC Culver City Service Area include the draft demands associated with the 5757 Uplander Way Project, per Reference 2.

(d) As discussed in Section 5 of this WSA and as shown in Table 4, the demands associated with the Proposed Project's multi-family residential use and corresponding distributional losses are not included within the GSWC Culver City Service Area's 2020 UWMP projections.

(e) Per Reference 2 and Reference 3, GSWC confirmed ability to purchase water from WBMWD as needed to meet demands. As such, the multiple dry year supplies available to GSWC are equal to the projected demands in the 2020 UWMP plus the additive demands of the Proposed Project and the draft additive demands of the 5757 Uplander Way Project.

7 COMPARISON OF SUPPLY AND DEMAND

☑ ***CWC § 10910 (c)(3)***

If the projected water demand associated with the proposed project was not accounted for in the most recently adopted urban water management plan, or the public water system has no urban water management plan, the water supply assessment for the project shall include a discussion with regard to whether the public water system's total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses.

☑ ***CWC § 10911 (a)***

If, as a result of its assessment, the public water system concludes that its water supplies are, or will be, insufficient, the public water system shall provide to the city or county its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies. If the city or county, if either is required to comply with this part pursuant to subdivision (b), concludes as a result of its assessment, that water supplies are, or will be, insufficient, the city or county shall include in its water supply assessment its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies. Those plans may include, but are not limited to, information concerning all of the following:

(1) The estimated total costs, and the proposed method of financing the costs, associated with acquiring the additional water supplies.

(2) All federal, state, and local permits, approvals, or entitlements that are anticipated to be required in order to acquire and develop the additional water supplies.

(3) Based on the considerations set forth in paragraphs (1) and (2), the estimated timeframes within which the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), expects to be able to acquire additional water supplies.

☑ ***CWC § 10911 (c)***

The city or county may include in any environmental document an evaluation of any information included in that environmental document provided pursuant to subdivision (b). The city or county shall determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the project, in addition to existing and planned future uses. If the city or county determines that water supplies will not be sufficient, the city or county shall include that determination in its findings for the project.

Pursuant to CWC §10910(c)(3), this WSA includes an estimate of the projected water supplies available to GSWC Culver City service area under normal, single dry, and multiple dry years, based on the 2020 UWMP, and a discussion of whether those supplies will meet the projected demand associated with the Proposed Project as well as the water system's existing and planned future uses. This assessment is parallel to the multiple-dry year supply reliability analysis required for UWMPs under CWC §10635. In 2018, CWC §10635 was revised to require UWMPs to extend this analysis to consider "a drought lasting five consecutive water years." Although the parallel WSA requirement (i.e., CWC §10910(c)(3)) has not been updated to require this for WSAs, a five-year drought scenario is also evaluated herein.

Tables 6, **7**, and **8** provide a comparison of the demands and supplies, inclusive of the Proposed Project and other known developments, in normal year, single-dry year, and multiple-dry year hydrologic scenarios for the GSWC Culver City service area. As discussed above, the available supplies to the GSWC Culver City service area are considered to be equal to GSWC Culver City service area 2020 UWMP demands plus the additive demands of other known developments and the Proposed Project under all conditions (i.e., current and projected, and for normal, single dry, and multiple dry years).

While supply shortfalls are not projected, any shortfalls that could occur in the future would be managed through the implementation of GSWC Culver City service area's WSCP. The overall reduction goals in the WSCP are established for six drought stages ranging from 10% to greater than 50% shortfalls.

During the historic 2013-2017 drought, the GSWC Culver City service area was subject to the State Water Resources Control Board's (SWRCB's) mandatory water reduction target at 16% between June 2015 and May 2016,[6] and met its target through implementation of its WSCP and reducing its water demand 17% relative to its water use in 2013 (SWRCB, 2016). On 8 July 2021, in response to the recent drought conditions, Governor Newsom signed Executive Order (EO) N-10-21 calling Californians to voluntarily reduce water use by 15% compared to 2020 levels. On 28 March 2022, following the driest first three months of a year in the state's recorded history, Governor Newsom signed EO N-7-22 calling on local water suppliers to move to Stage 2 of their WSCP. GSWC enacted Stage 2 of its WSCP for the GSWC Culver City service area on 27 June 2022 and implemented numerous drought response actions, including, but not limited to, outdoor watering day restrictions and drought emergency surcharges for usage in excess of customer baseline (GSWC, 2021; GSWC, 2022b). As a result of recent dramatic rainfall in 2023, GSWC moved the GSWC Culver City service area from Stage 2 to Stage 1 effective 14 May 2023 (GSWC, 2023). As a customer within the GSWC Culver City service area, the Proposed Project would be obligated to comply with any demand reduction efforts imposed by GSWC through implementation of the WSCP in any future water shortage conditions. Therefore, the Proposed Project would contribute a proportionate share of the reduction in water demands during dry years or other water shortage condition.

In 2016, Governor Brown signed EO B-37-16 *Making Water Conservation a California Way of Life* and subsequently SB 606 and AB 1668 were passed. SB 606/AB 1688 set new requirements for urban water agencies to continue to increase water efficiency beyond the 2020 water use targets developed under the Water Conservation Act of 2009 (SB X7-7). Beginning in 2024, agencies are required to report on "urban water use objective" (UWUO), which is based on an aggregate

[6] On 5 May 2015, the SWRCB adopted Resolution 2015-0032 that mandates minimum actions by water suppliers and their customers to conserve water supplies into 2016 and assigned a mandatory water conservation goal to each water supplier based on their residential gallons per capita per day (R-GPCD). The Resolution was adopted pursuant to Executive Order B-29-15 that directed SWRCB to impose mandatory restrictions on urban water suppliers to achieve a statewide 25% reduction in potable urban water usage to address California's severe drought conditions.

estimate of efficient urban water use for the previous year based on local service area characteristics for that year and the adopted water use efficiency standards for the previous year (DWR, 2023). Additionally, agencies can adjust their UWUO's by adding an allowable potable reuse bonus incentive under CWC §10609.20(d). Through comparing UWUOs from the previous to the current year, agencies are expected to be better equipped to eliminate unnecessary uses of water, resulting in continued increases in efficiency for all urban water suppliers in the State.

In addition, SB 606/AB 1668 added new requirements related to drought planning and WSCPs, including requirements for agencies to: (1) conduct a drought risk assessments part of their future UWMPs to assess water supply reliability (or vulnerability) for a period of drought lasting five consecutive water years (CWC §10635(b)), and (2) conduct annual water supply and demand assessments to determine its water supply reliability for the current year and one dry year (CWC §10632(a)). These elements are included in the GSWC Culver City service area 2020 WSCP (i.e., Chapter 6 of the 2020 UWMP).

Therefore, given that: (1) the projections inclusive of the Proposed Project do not identify supply shortfalls under any hydrologic conditions evaluated; (2) GSWC has the ability to implement the WSCP in the case of supply shortages, and demonstrated its effectiveness during recent droughts; and (3) the recent increasing efficiency and drought planning requirements from the State, sufficient water supply is estimated to be available to GSWC to meet all future demands within the GSWC Culver City service area including those associated with the Proposed Project.

8 CONCLUSIONS

As listed in CWC §10910(c)(4), the primary purpose of this WSA is to evaluate whether sufficient water supply is available to meet all future water demands within the water supplier's service area, including those associated with the Proposed Project, during normal, single, and multiple dry hydrologic years for a 20-year time horizon.

As described in Section 4, the water demand of the Proposed Project (i.e., estimated at 104 AFY at buildout) has been conservatively estimated. As discussed in Section 5, the Proposed Project's commercial and landscaping demands, and associated water distribution losses, are within the projected water demand growth that form the basis of GSWC's demand projections in the adopted GSWC Culver City 2020 UWMP, while the multi-family residential and corresponding distributional loss demands are additive to the 2020 UWMP projections. GSWC has confirmed that it is able to purchase 100% reliable water supply from WBMWD to meet these additive demands of the Proposed Project. In addition, GSWC, due to new requirements by the State, is currently required to continue to increase water efficiency in its service area into the future. GSWC has demonstrated effectiveness in reducing demand during recent water shortage conditions through implementation of its WSCP and would be expected to rely on its WSCP to meet any potential water shortages or regulatory-required cutbacks.

Therefore, this WSA concludes that sufficient water supply is available to GSWC to meet all future demands within the GSWC Culver City service area, including those associated with the Proposed Project.

Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

"Proposed Project" = 10950 Washington Boulevard

"UWMP" = Urban Water Management Plan

Notes:

(a) Values in black indicate cumulative anticipated sector growth (i.e., number of service connections) included in the GSWC - Culver City 2020 UWMP (Reference 1). Values in blue indicate the anticipated incremental growth in service connections between each five-year period included in the 2020 UWMP for each sector. Values in purple and orange indicate the number of service connections associated with other known developments in the GSWC Culver City service area from publicly available WSAs (in this case, the Culver Crossings Campus Building 1 and 5757 Uplander Way Projects, respectively). Values in green indicate the incremental growth in service connections associated with the Proposed Project. It should be noted that Proposed Project demands, along with the demands of the Culver Crossings Campus Building 1 and 5757 Uplander Way Projects, were converted from acre-feet per year (AFY) to number of service connections for comparison purposes using the conversion factors provided in the 2020 UWMP.

(b) The draft 5757 Uplander Way Project demands are provided per Reference 2. It is important to note that the demands associated with this project are currently in the process of being updated to reflect changes to the project description and County of LA demand factors. As such, the projected accounts associated with this project's multi-family residential, commercial, and landscaping uses are subject to change.

(c) The number of service connections for the Proposed Project associated with the multi-family residential use (green) is greater than the anticipated growth indicated in the 2020 UWMP for the multi-family residential sector (blue). Because of this, it can be assumed that these demands are not included in the 2020 UWMP and are, therefore, additive to the demands of the 2020 UWMP.

(d) The Culver Crossings Campus Building 1 Project demands are provided per Reference 3.

(e) The number of service connections for the Proposed Project associated with the commercial use (green) is less than the anticipated growth indicated in the 2020 UWMP for the commercial sector (blue). Because of this, it can be assumed that these demands are included in the 2020 UWMP.

Chapter 1
Introduction

This study presents the transportation assessment for the proposed mixed-use development project (Project) at 10950 Washington Boulevard (Project Site) in the City of Culver City, California (City). The methodology and base assumptions used in the analysis were established in conjunction with the Culver City Public Works Department (CCPWD) Mobility and Traffic Engineering Division.

PROJECT DESCRIPTION

The Project proposes the demolition of two existing office buildings and the construction of a new, mixed-use residential and commercial project with a public outdoor paseo. The redevelopment would include a total of 508 housing units, including 79 units of affordable housing, and 14,087 square feet (sf) of ground-floor, neighborhood-serving commercial space, replacing the existing 160,438 sf of office. Completion of the project is anticipated in Year 2030.

A total of 715 parking spaces would be provided on-site and accessed by two garage entrances provided at both Building A and Building B. The Level 1 parking entrances would lead to two at-grade parking garages, providing 30 commercial and guest spaces and 40 residential spaces on Level 1 of Building A and 39 residential spaces on Level 1 of Building B. The Level P1 parking entrances would provide ramps that lead to one subterranean parking garage spanning both Building A and Building B, providing 606 residential spaces. The entire parking area for both buildings will be physically secured for safety.

Vehicular access to the Project Site would be provided by two separate driveways along Washington Boulevard. The north driveway (Driveway A) would provide commercial, guest, and residential access to Building A from a fire lane along the northeast side of the property, and the south driveway (Driveway B) would provide residential access to Building B. Driveway B is an existing driveway, aligned with the west leg of Prospect Avenue, that would need to be modified

as part of the Project to meet City design standards. Both driveways would provide full access operations, including both right- and left-turn ingress and egress along Washington Boulevard. Pedestrian access to the Project Site would be provided via separate lobby entrances and a public paseo accessed along Washington Boulevard.

The conceptual Project site plan is illustrated in Figure 1.

PROJECT LOCATION

As shown in Figure 2, the Project Site is bounded by the Washington Boulevard and Elenda Street to the north, residential uses to the east, Huron Avenue and residential uses to the south, and Washington Boulevard and residential uses to the west. The surrounding area is urbanized with a mixture of residential and commercial uses.

The Project is located approximately 0.4 miles east of the San Diego Freeway (I-405), which provides regional transportation along the southern and western parts of the Greater Los Angeles area from Irvine to the south to the San Fernando Valley to the north. Local access to the Project Site is primarily served by Washington Boulevard.

Nearby transit service is provided along Washington Boulevard, Venice Boulevard, and Culver Boulevard. The Project is within 0.5 miles of the Sepulveda Boulevard & Venice Boulevard intersection and, therefore, is within a Transit Priority Area (TPA). Additionally, the Project Site is located within 1.50 miles of the Los Angeles County Metropolitan Transportation Authority (Metro) E Line Culver City and Palms Stations.

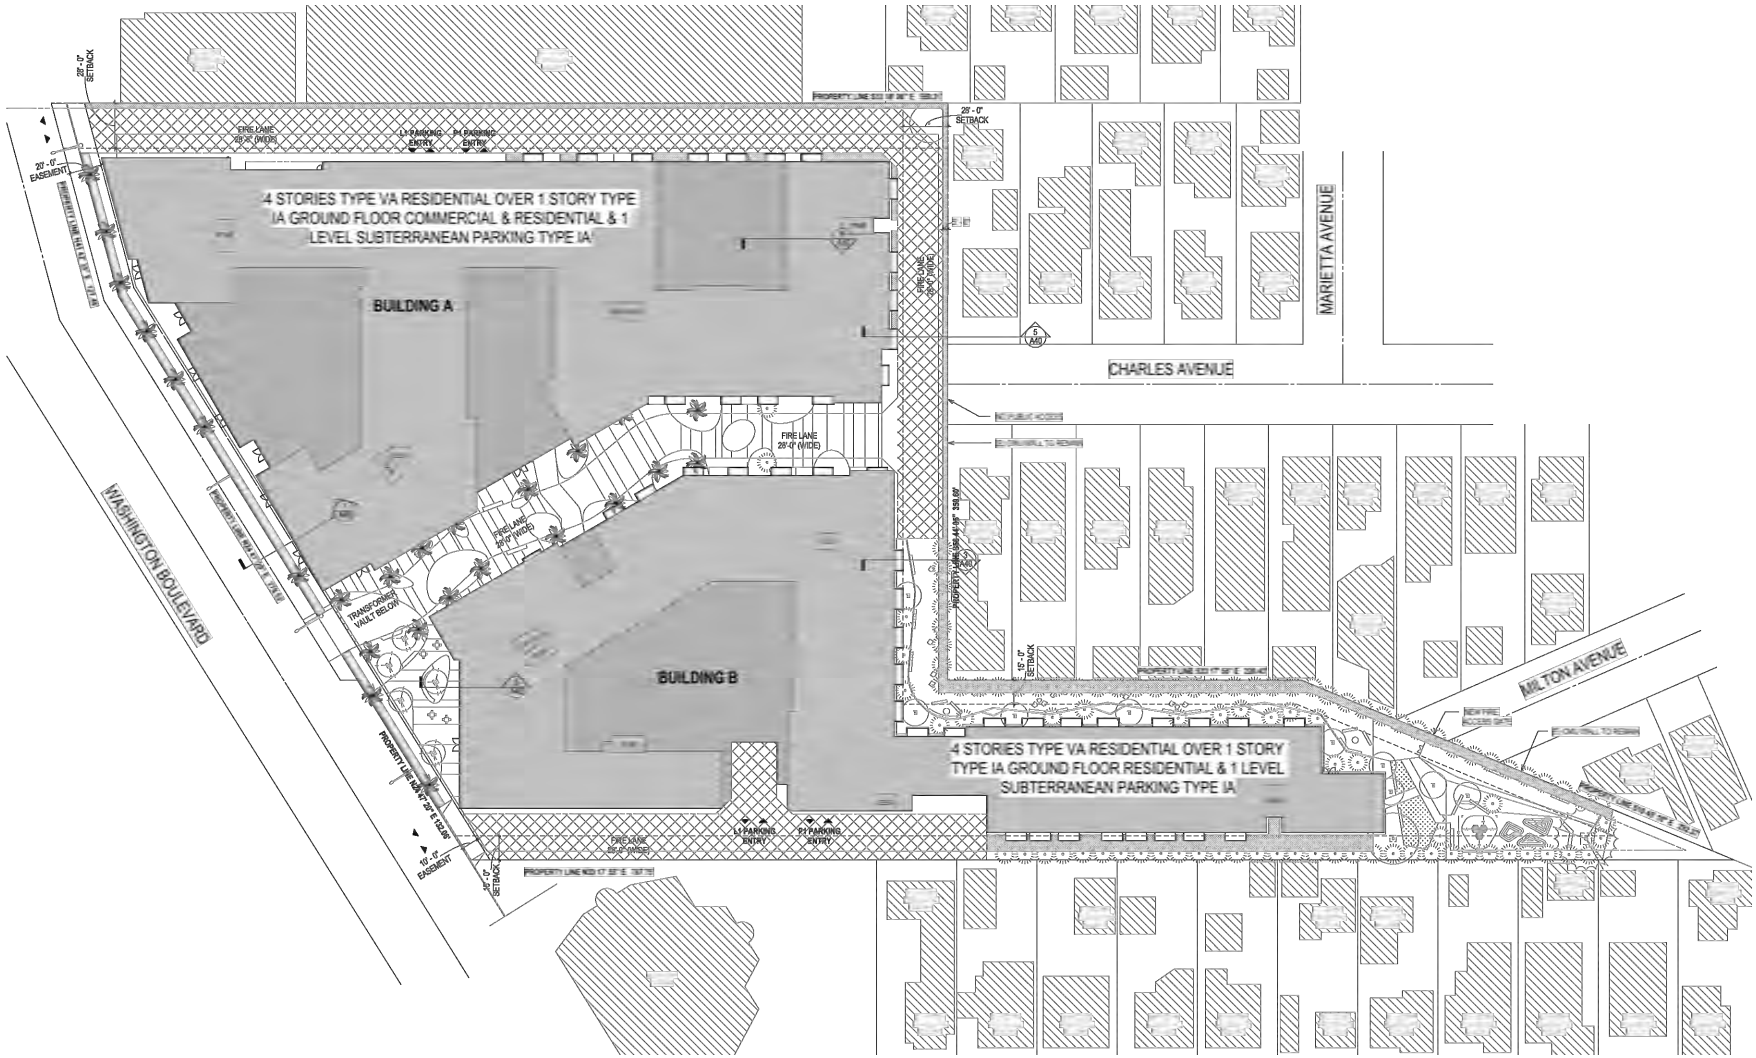
STUDY SCOPE

The scope of analysis for this study was developed in consultation with the City and is consistent with *Culver City Transportation Study Criteria and Guidelines* (CCPWD, July 2020) (Guidelines) and in compliance with the California Environmental Quality Act (CEQA) Guidelines (California Code of Regulations, Title 14, Section 15000 and following). The base assumptions and technical methodologies (i.e., trip generation, study locations, analysis methodology, etc.) were identified as

part of the study approach and were outlined in a Memorandum of Understanding (MOU) that was reviewed and approved by CCPWD in April 2024 and is provided in Appendix A.

ORGANIZATION OF REPORT

This report is divided into six chapters, including this introduction. Chapter 2 describes the transportation network including the existing and future circulation system, traffic volumes, and traffic conditions in the Project area. Chapter 3 provides the Project traffic and trip distribution. Chapter 4 presents the CEQA analysis of transportation impacts. Chapter 5 details the non-CEQA transportation analyses. Chapter 6 summarizes the analyses and study conclusions. The appendices contain supporting documentation, including the signed MOU that outlines the study scope and assumptions and additional details supporting the technical analyses.



Source: KFA Architects. August, 2024.

PROJECT SITE PLAN

FIGURE 1

PROJECT SITE LOCATION

FIGURE 2

Chapter 2
Transportation Network Review

A comprehensive data collection effort was undertaken to develop a detailed description of existing and future conditions in the Project area.

The Existing Conditions analysis includes an assessment of the existing transportation infrastructure and conditions including freeway and street systems, and transit service, as well as pedestrian and bicycle circulation, at the time the MOU was approved in April 2024. Fieldwork (lane configurations, signal phasing, parking restrictions, etc.) for the analyzed intersections was collected in Year 2025.

In addition, this Chapter contains a discussion of the Future Conditions assumptions used to develop the Future without Project Conditions in Year 2030, which corresponds to projected occupancy of the Project, and Cumulative without Project Conditions in Year 2045, which corresponds to the horizon year of the *Culver City General Plan 2045* (effective October 9, 2024) (General Plan).

STUDY AREA

The Project's transportation analysis Study Area, shown in Figure 3, includes intersections along Venice Boulevard, Washington Boulevard, and Culver Boulevard. This Study Area was established in consultation with CCPWD.

A total of four intersections and two Project driveways, listed in Table 1, were identified for detailed analysis during the MOU process. The existing lane configurations at the analyzed intersections are provided in Figure 4.

The list of study intersections was reviewed and approved by the City.

EXISTING TRANSPORTATION CONDITIONS

Existing Street System

The existing street system in the Study Area consists of a regional roadway system including arterials and local streets that provide regional, sub-regional, or local access and circulation within the Study Area. These transportation facilities generally provide two to four travel lanes and usually allow parking on one or both sides of the street. Typically, the speed limits range between 25 and 35 miles per hour (mph) on the streets and 55 mph on the freeways.

Street classifications for City roadways are designated in the City's *Culver City General Plan Mobility Element* (effective October 9, 2024) (Mobility Element). The Mobility Element defines specific street standards in an effort to effectively link and serve local and regional transportation systems. Per the Mobility Element, street classifications are defined as follows:

- Freeways are specialized arterials with limited access and are grade-separated from the City's street system. Their primary function is to carry large volumes of traffic at high speed throughout the region.
- Primary Arterials are major cross-town thoroughfares with desired right-of-way (ROW) widths of 95 feet or more. Traffic flow on Primary Arterials is characterized as high volume and fast-moving. Direct access onto Primary Arterials from private driveways should be limited or prohibited. Where private driveways are prohibited, Primary Arterials are designed as controlled access streets.
- Secondary Arterials provide links between Collectors and Primary Arterials with desired ROW widths of 80 to 94 feet.
- Major Collectors provide a means for the movement of traffic from Local Streets to larger streets with desired ROW widths between 60 to 79 feet.
- Minor Collectors are generally located within residential neighborhoods and provide direct routes between Local Streets and the adjacent arterials with desired ROW widths of 60 feet or less.
- Local Streets provide access for vehicles to travel between private parking and driveways to larger, non-Local Streets. Generally, Local Streets do not exceed 60 feet of ROW widths and are mostly in residential neighborhoods.

The Mobility Element defines design characteristics, functional uses, and implementation for roadway segments and/or corridors that support the City's goals and objectives. Special

Designation functional classifications for City roadways are also designated in the Mobility Element are defined as follows:

- Truck Routes are currently a Special Designation that support the movement of goods and freight on commercial vehicles (over 6,000 pounds - unladen) considered too heavy for many City streets.

- Active Transportation Corridors reallocate ROW, including converting or reconfiguring parking or travel lanes, to support safe, active transportation trips. Corridor improvements may include curb management solutions, passenger wayfinding and intelligent transportation systems (ITS) signalization, traffic calming, and pedestrian and bicycle facilities.

- Transit Priority Corridors reallocate ROW for specific transit and/or alternative modes. Corridor improvements may include transit priority lanes/signals, passenger wayfinding and ITS, and enhanced transit stops or mobility hubs.

- Car-Free Zones (Vacated Streets) will be assigned to roadways (or roadway segments) and reallocate and/or repurpose ROW both inside and outside of the curb, for improvements that could include creation of public spaces, economic development initiatives, complete streets implementation, and pedestrian and bicycle safety measures.

Primary regional access to the Project Site is provided by I-405. In proximity to the Project Site, the Study Area is served by arterial streets such as Venice Boulevard, Washington Boulevard, and Culver Boulevard. The following is a brief description of the roadways in the Study Area, including their classifications under the Mobility Element:

Freeways

- I-405 – I-405 generally runs in the northwest-southeast direction and is located 0.40 miles southwest of the Project Site. In the vicinity of the Project Site, I-405 provides seven travel lanes in each direction. Access to and from I-405 is available via interchanges at Sepulveda Boulevard.

Roadways

- Venice Boulevard – Venice Boulevard is a designated Primary Arterial and Truck Route that runs in the northeast to southwest direction and is located generally north of the Project Site. It provides four travel lanes, two in each direction, with two bus only lanes, one in each direction. There is a center landscaped median. Non-metered on-street parking is generally

provided on both sides of the street. Travel lanes are typically 10 feet wide, and the total paved width is generally 130-150 feet.

- Washington Boulevard – Washington Boulevard is a designated Primary Arterial and Transit Priority Corridor that runs in the northeast to southwest direction and is located adjacent to the northwest boundary of the Project Site. It provides four travel lanes, two in each direction, with a two-way left-turn lane median. Non-metered on-street parking is generally provided on both sides of the street. Travel lanes are typically 11 feet wide, and the total paved width is generally 100 feet.

- Washington Place – Washington Place is a designated Secondary Arterial that runs in the northeast to southwest direction and is located generally west of the Project Site. It provides four travel lanes, two in each direction, with a two-way left-turn lane median. Non-metered on-street parking is generally provided on both sides of the street. Travel lanes are typically 10 feet wide, and the total paved width is generally 100 feet.

- Culver Boulevard – Culver Boulevard is a designated Primary Arterial that runs in the northeast to southwest direction and is located generally south of the Project Site. It provides a two lane, 2-way access road, a 2-way Class I bike lane within a median, and an additional street with four travel lanes, two in each direction, with its own median. Limited non-metered on-street parking is provided on the south side of the street, and on both sides of the access road. Travel lanes are typically 11 feet wide, and the total paved width is generally 160-180 feet.

- Tilden Avenue – Tilden Avenue is a designated Local Street that runs in the northwest to southeast direction and is located generally west of the Project Site. It provides two travel lanes, one in each direction. Non-metered on-street parking is generally provided on both sides of the street. Travel lanes are typically 12 feet wide, and the total paved width is generally 50 feet.

- Girard Avenue – Girard Avenue is a designated Minor Collector that runs in the northwest to southeast direction and is located generally north of the Project Site. It provides two travel lanes, one in each direction. Non-metered on-street parking is generally provided on both sides of the street. Travel lanes are typically 12 feet wide, and the total paved width is generally 50 feet.

- Elenda Street – Elenda Street is a designated Major Collector and Active Transportation Corridor that runs in the northwest to southeast direction and is located adjacent to the eastern boundary of the Project Site. It provides two travel lanes, one in each direction, and a two-way left-turn lane median. Non-metered on-street parking is generally provided on the west side of the street. Travel lanes are typically 10 feet wide, and the total paved width is generally 80 feet.

- Prospect Avenue – Prospect Avenue is a designated Local Street that runs in the northwest to southeast direction and is located generally west of the Project Site. It provides two travel lanes, one in each direction. Non-metered on-street parking is generally provided on both sides of the street. Travel lanes are typically 10 feet wide, and the total paved width is generally 40 feet.

The existing intersection mobility facilities at the study intersections are shown in Figure 5.

Existing Transit System

Figure 6 illustrates the existing public transit service in the Study Area, which is served by bus lines operated by Metro, the Los Angeles Department of Transportation (LADOT), and Culver CityBus.

Table 2 summarizes the existing transit service operating in the Study Area for each of the service providers in the region, the type of service (peak vs. off-peak, express vs. local), and frequency of service. The average headways during the peak hour were estimated using detailed trip data from Year 2025 provided by Culver City Bus, LADOT, and Metro.

Existing Bicycle System

As shown in *Culver City Bicycle & Pedestrian Action Plan* (CCPWD, June 2020), the existing bicycle system in the Study Area consists of a variety of bicycle facilities.

Culver City Bicycle & Pedestrian Action Plan is comprised of a network of streets that prioritize bicyclists and provide Class I Shared-Use Paths, Class II Bicycle Lanes, Class III Bicycle Routes and Bike Boulevards, which provide sharrows and signage, and Class IV Separated Bikeways.

Within the Study Area, there are Class II bicycle lanes on Bentley Avenue between Venice Boulevard and Washington Place, Class III bicycle lanes on Girard Ave Between Venice Boulevard and Washington Boulevard and Elenda Street south of Culver Boulevard, and Class IV bike lanes are provided on Venice Boulevard and Elenda Street between Washington Boulevard and Culver Boulevard. Additionally, a Class I Shared Use Path is provided along Culver Boulevard south of Elenda Street. Bicycle facilities at the study intersections are shown in Figure 5.

Existing Pedestrian Facilities

Per *Culver City Bicycle & Pedestrian Action Plan*, most streets in the City have existing sidewalks in good condition. Marked crosswalks, including transverse lines and continental striping, are provided at most major intersections throughout the City.

The walkability of existing facilities is based on the availability of pedestrian routes necessary to accomplish daily tasks without the use of an automobile. These attributes are quantified by Walk Score and assigned a score out of 100 points. With access to numerous commercial businesses, residences, and cultural centers, the walkability of the Project Site is approximately 92 points[1]. The sidewalks that serve as routes to the Project Site provide proper connectivity and adequate widths for a comfortable and safe pedestrian environment. Adjacent to the Project site and along Washington Boulevard there is an existing network where complete sidewalks are provided with trees and intermittent landscaping. Pedestrian crossings are provided at signalized intersections within the Study Area. Further, a High-Intensity Activated Crosswalk (HAWK) beacon is installed on Washington Boulevard at the western leg of Huron Street, ensuring a safe and controlled crossing for pedestrians. Additional pedestrian facilities, such as pedestrian phasing, curb ramps, and crosswalk striping, at the study intersections are shown in Figure 5.

Vision Zero

The City adopted the Vision Zero initiative in 2016. Vision Zero is a traffic safety policy that promotes strategies, including modifying the design of streets, to eliminate collisions that result in severe injury or death and increase safety for the most vulnerable road users. Vision Zero has identified the High Injury Network (HIN), a network of streets based on the collision data from *Culver City Bicycle & Pedestrian Action Plan* between Years 2014-2019, where strategic investments would have the biggest impact in reducing death and severe injury. Within the Study Area, Washington Place, Washington Boulevard, Sepulveda Boulevard, Venice Boulevard, and Culver Boulevard are identified as part of the HIN.

Safe Routes to School

The City identifies Safe Routes to School (SRTS) Improvement Zones where, in addition to prioritizing traffic calming and other active transportation-focused projects, the City recommends improved pedestrian network connections to local schools. The SRTS Improvement Zones have

[1] Walk Score (www.walkscore.com) rates the Project Site (10950 Washington Boulevard) with a score of 92 of 100 possible points (scores assessed on July 19, 2024). Walk Score calculates the walkability of specific addresses by taking into account the ease of living in the neighborhood with a reduced reliance on automobile travel.

intersection and corridor safety projects within a 0.25-mile radius of several K-12 schools. Safety projects consist of new or improved crosswalks, traffic signal improvements, traffic calming elements such as speed humps and roundabouts, curb ramps and extensions, updated signage and pavement markings, and sidewalk improvements. Within the Study Area, the Project Site, as well as Venice Boulevard, Washington Boulevard, Girard Avenue, Elenda Street, Culver Boulevard, Prospect Avenue, and Tilden Avenue, are within SRTS Improvement Zones.

Existing Traffic Volumes

Intersection turning movement counts for typical weekday morning (7:00 AM to 9:00 AM) and afternoon (4:00 PM to 6:00 PM) peak periods were collected in June 2024 and February 2025 while schools were in session and weather conditions were clear. Volumes from 2024 were increased by 1% to reflect 2025 conditions. The Existing Conditions (Year 2025) intersection peak hour traffic volumes are illustrated in Figure 7. Traffic count worksheets are provided in Appendix B.

FUTURE AND CUMULATIVE TRANSPORTATION CONDITIONS

The forecast for Future without Project Conditions (Year 2030) and Cumulative without Project Conditions (Year 2045) was prepared in accordance with procedures outlined in the Guidelines. Specifically, there are two requirements for developing the future traffic volume forecast: (1) projected future volumes and (2) ongoing or entitled development projects near or within the Study Area (Related Projects).

The ambient growth factor discussed below likely includes some traffic increases resulting from the Related Projects. Therefore, through some inherent double-counting of vehicles, the traffic analysis provides a conservative estimate of Future without Project Conditions traffic volumes.

The forecast base year traffic volumes, therefore, include ambient growth, which reflects increases in traffic due to regional growth and development outside the Study Area as well as the Related Projects.

Ambient Traffic Growth

Existing traffic levels have historically been projected to increase as a result of regional growth and development. To provide a conservative estimate of future background conditions, this analysis used the 1% annual growth precedent as approved in the MOU to simulate anticipated buildout for both Year 2030 and Year 2045 traffic volumes. The total adjustment applied over the five-year and 20-year periods were 5% and 20%, respectively. These growth factors account for increases in traffic due to potential projects not yet proposed and projects located outside the Study Area.

Related Projects

In accordance with the Guidelines, this study also considered the effects of the Project in relation to the Related Projects. Including this analysis step, the potential impact of the Project was evaluated within the context of past, present, and probable future developments capable of producing cumulative impacts. The list of Related Projects is based on information provided by both the City and the City of Los Angeles in January 2024, as well as recent studies of development projects in the area. Related Projects within 0.50 miles of the Project Site were considered in the analysis and represent development projects most likely to add traffic to the study intersections. The Related Projects are detailed in Table 3 and their approximate locations are shown in Figure 8.

Though the buildout years of many of these Related Projects are uncertain and may be well beyond the buildout year of the Project, and notwithstanding that some may never be approved or developed, they were all considered as part of this transportation assessment and conservatively assumed to be completed by the Project buildout year of 2030 and General Plan horizon year of 2045. The traffic growth due to the development of Related Projects considered in this analysis is highly conservative and, by itself, substantially overestimates the actual traffic volume growth in the area that would likely occur prior to Project buildout years. With the addition of the 1% per year ambient growth factor previously discussed, the Future without Project Year 2030 and Cumulative without Project Year 2045 Conditions are even more conservative.

Using these conservative assumptions, the potential traffic operations of the Project were evaluated. The development of estimated traffic volumes added to the Study Intersections as a result of Related Projects involves the use of a three-step process: trip generation, trip distribution, and trip assignment.

Trip Generation. Trip generation estimates for the Related Projects were calculated using a combination of previous study findings and the trip generation rates contained in *Trip Generation Manual, 10th Edition* (Institute of Transportation Engineers, 2030), *Trip Generation Manual, 11th Edition* (Institute of Transportation Engineers, 2021) or were provided by the respective jurisdiction. The Related Projects trip generation estimates summarized in Table 3 are conservative in that they do not in every case account for either the trips generated by the existing uses to be removed or the likely use of other travel modes (e.g., transit, bus, bicycling, walking, carpool, etc.). Further, they do not account for the internal capture trips within a multi-use development or for the interaction of trips between multiple Related Projects, in which one Related Project serves as the origin for a trip destined for another Related Project.

Trip Distribution. The geographic distribution of the traffic generated by the Related Projects is dependent on several factors. These factors include the type and density of the proposed land uses, the geographic distribution of population from which the employees / residents and potential patrons of the proposed developments are drawn, and the location of these projects in relation to the surrounding street system. These factors were considered along with logical travel routes through the street system to develop a reasonable pattern of trip distribution.

Traffic Assignment. The trip generation estimates for the Related Projects were assigned to the local street system using the trip distribution pattern described above. Figure 9 shows the peak hour traffic volumes associated with these Related Projects at the Study Intersections.

Future without Project Traffic Volumes

The Related Projects volumes were then added to the existing traffic volumes after adjustment for ambient growth through the projected Project completion year of 2030. As discussed above, this is a conservative approach as many of the Related Projects may be reflected in the ambient growth rate. These volumes represent the Future without Project Conditions (i.e., ambient traffic growth

and Related Project traffic added to existing traffic volumes) for Year 2030 at the study intersections and are shown in Figure 10.

Cumulative without Project Traffic Volumes

Similar to the Future without Project Conditions traffic volumes, the Related Projects volumes were added to the existing traffic volumes after adjustment for ambient growth through the projected General Plan horizon year of 2045. These volumes represent the Cumulative without Project Conditions (Year 2045) at the study intersections and are shown in Figure 11.

Future Improvements

The analysis of Future Conditions considered transportation improvements that are funded and expected to be implemented prior to the buildout of the Project. These improvements could result in changes to the physical configuration at the study intersections. Other proposed improvement projects that are not funded and traffic / trip reduction strategies such as Transportation Demand Management (TDM) programs for individual buildings and developments were conservatively omitted from the Future and Cumulative Conditions analyses. The future improvements proposed as part of the Mobility Element are illustrated in Figure 12. A summary of additional future improvements is provided below.

Bicycle and Pedestrian Action Plan. *Culver City Bicycle & Pedestrian Action Plan* identifies key recommended improvements for corridors throughout the City. The goal of this plan is to improve active forms of transportation by providing accessible, safe, and comfortable environments for all road users. The following summarizes the recommended network upgrades, depicted in Figure 12, planned on corridors within 0.25 miles of the Project Site:

- Recommended Bicycle Facilities: New Class II bikeways have been recommended for installation on Washington Boulevard, Sepulveda Boulevard, and Harter Avenue.
- Recommended Pedestrian Facilities: No further new beacons/signals have been recommended for installation within the Project Area.

- Opportunity Corridors: Three Opportunity Corridors consisting of “planning-level projects” for additional improvements for bicycling and walking included the Downtown Core, Overland Avenue, and Farragut Drive. None of these Opportunity Corridors are located within 0.25 miles of the Project Site.

The specific timeline for implementation of these recommendations has not been identified; therefore, no changes to intersection lane configurations were made as a result of *Culver City Bicycle & Pedestrian Action Plan*.

Mobility Hubs. The City identifies key intersections where mobility hubs could be implemented into the broader transportation system to maximize the benefits and mitigate negative externalities of new transit services. Per the Mobility Element, “mobility hubs are places designed to connect people with multiple modes of transportation and maximize first- and last-mile connections to high-quality transit service. Mobility hubs integrate different modes and can include a variety of features, like bus layover zones, shelters, real time information, bikeshare stations, carshare facilities, wayfinding, taxi stands, public Wi-Fi service, bicycle parking and lockers, micromobility services, retail, and open space.” The study intersection of Washington Boulevard & Elenda Street has been identified for implementation of a mobility hub. The specific timeline for implementation of mobility hubs has not been identified; nevertheless, the Project would not preclude future implementation at this intersection.

Notes:

[a] Related Project information provided by the City of Culver City and City of Los Angeles in January 2024. Related Projects include developments within approximately 0.5 miles of the Project Site.

[b] Trip Generation estimates developed internally using *Trip Generation Manual, 11th Edition* (Institute of Transportation Engineers, 2021).

[c] Trip Generation estimates developed internally using *Trip Generation Manual, 10th Edition* (Institute of Transportation Engineers, 2017).

Chapter 3
Project Traffic

Trip generation estimates, trip distribution patterns, and trip assignments were prepared for the Project. These components form the basis of the Project's non-CEQA traffic analysis.

PROJECT TRIP GENERATION

The number of vehicle trips expected to be generated by the Project was estimated using rates published in *Trip Generation Manual, 11th Edition*. These rates are based on surveys of similar land uses at sites around the country and are utilized to calculate the number of vehicle trips traveling to and from the Project Site during the morning and afternoon peak hours relative to the size of development.

Appropriate trip reductions were applied in consultation with CCPWD to account for public transit usage, internal capture, and pass-by trips. The Project is located within 0.50 miles walking distance of several bus stops, including 0.10 miles walking distance of the Washing Boulevard / Elenda Street, Washington Boulevard / Prospect Avenue, and Washing Boulevard / Huron Avenue stops, and near various bicycle facilities. Therefore, in consultation with CCPWD, a 10% transit / walk-in reduction was applied to the trip generation estimates to account for transit usage and walking arrivals from the surrounding neighborhoods and adjacent commercial developments.

The number of trips currently generated by the existing office uses to be removed with development of the Project was also estimated using the rates published in *Trip Generation Manual, 11th Edition*. The existing use trip estimates also account for trip reductions consistent with the Project.

As shown in Table 4, after accounting for the adjustments above and the removal of existing uses, the Project is expected to generate 1,508 daily trips with 46 net new morning peak hour trips

(-102 inbound trips, 148 outbound trips) and 57 net new afternoon peak hour trips (127 inbound trips, 70 outbound trips).

PROJECT TRIP DISTRIBUTION

The geographic distribution of trips generated by the Project is dependent on the location of employment, residential, and commercial centers to and from which Project residents, employees, and visitors would be drawn, characteristics of the street system serving the Project Site, the location of the Project driveways, existing traffic patterns, as well as input from CCPWD staff. As detailed in Figure 13, both Project driveways would provide full access operations, including both right- and left-turn ingress and egress along Washington Boulevard.

The intersection-level trip distribution pattern for office and food retail traffic at the study intersections is shown in Figure 13. Generally, the regional pattern is as follows:

- 35% to/from the north
- 15% to/from the east
- 35% to/from the south
- 15% to/from the west

PROJECT TRIP ASSIGNMENT

The Project trip generation estimates summarized in Table 4 and the trip distribution pattern shown in Figure 13 were used to assign the Project-generated traffic through the study intersections. Figure 14 illustrates the Project-only traffic volumes for the Project at the study intersections during typical weekday morning and afternoon peak hours.

TOTAL - NET NEW PROJECT TRIPS			**1,508**	**(101)**	**148**	**47**	**126**	**(70)**	**56**

Notes:
ksf: 1,000 square feet, du: dwelling unit
[a] Source: AM and PM Peak Hour Rates: *Trip Generation, 11th Edition* , Institute of Transportation Engineers, 2021.
[b] The Project site is located within 0.25 miles of bus stops for several Culver CityBus lines. Therefore, a 10% transit reduction was applied to account for transit usage and walking visitor arrivals.
[c] Internal capture reductions account for person trips made between distinct land uses within a mixed-use development (i.e., between residential and retail).
[d] Pass-by reductions account for Project trips made as an intermediate stop on the way from an origin to a primary trip destination without route diversion.

Chapter 4
CEQA Analysis of Transportation Impacts

This chapter presents an analysis of potential CEQA-related transportation impacts. The analysis also discusses the consistency of the Project with adopted City plans and policies and the improvements, if necessary, associated with the results of a vehicle miles traveled (VMT) analysis compliant with State requirements under *State of California Senate Bill 743* (Steinberg, 2013) (SB 743).

METHODOLOGY

SB 743 required the Governor's Office of Planning and Research to change the CEQA Guidelines regarding the analysis of transportation impacts. Under SB 743, the focus of transportation analysis shifted from vehicular delay (level of service [LOS]) to VMT, with the intent of reducing greenhouse gas emissions, creating multimodal networks, and promoting mixed-use developments.

Section 4 of the Guidelines defines the required CEQA methodology of analyzing a project's transportation impacts in accordance with SB 743. Per the Guidelines, the CEQA transportation analysis contains the following thresholds for identifying significant impacts:

- Threshold A: Programs, Plans, Ordinances, and Policies
- Threshold B: VMT – Land Use Projects
- Threshold C: VMT – Transportation Projects
- Threshold D: Geometric Design Hazards

These thresholds were reviewed and analyzed, as detailed in the following Sections 4A-4D.

Section 4A:
Programs, Plans, Ordinances, and Policies

Threshold A states that a project would result in an impact if it conflicts with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities.

PROJECT CONSISTENCY WITH PLANS, PROGRAMS, ORDINANCES, AND POLICIES

Table 1 of the Guidelines identifies the City programs, plans, ordinances, and policies relevant in determining project consistency. As discussed below, the Project is consistent and does not conflict with the City's adopted programs, plans, ordinances, and policies listed in Table 1 of the Guidelines; therefore, the Project would not result in a significant impact under Threshold 4A. A detailed discussion of the plans, programs, ordinances, or policies related is provided below.

Traffic Code, Chapter 7.05: Motor Vehicle Air Quality Management

Chapter 7.05 of *Culver City Municipal Code* (CCMC) establishes transportation demand and trip reduction measures to reduce vehicular emissions of new developments in excess of 25,000 sf. The Project is greater than 25,000 sf and would implement a comprehensive TDM program that adheres to the TDM requirements of the CCMC.

Mobility Element

The purpose of the Mobility Element is to establish a policy framework that envisions a 2045 citywide network for all transportation modes by encouraging use of active and shared modes getting to, from, and within Culver City by providing more reliable, safe, affordable, convenient, clean, and connected mobility options for people of all ages and abilities. By enhancing safe and

reliable access to schools, parks, community services, neighborhood serving retail, and jobs, the Mobility Element aids in creating a community that is more equitable, inclusive, innovative, and sustainable. As specified in Chapter 2, the Mobility Element identifies existing community mobility-related concerns and opportunities, and establishes goals, policies, and guidance to address these concerns for the future improvement of the transportation network. The Project does not propose to modify or make any modifications to the street classifications or Special Designations, nor would it preclude the City from making improvements to the transportation network.

General Plan 2045 Land Use and Community Design Element

The purpose of the City's *Culver City General Plan Land Use and Community Design Element* (effective October 9, 2024) (Land Use Element) is to define the pattern, scale, organization, and character of development for the city's various land uses, including residential, mixed use, office, retail, light industrial, and civic and public spaces. The Project is located within a Transit-Oriented Community (TOC) because it is located within 0.5 miles of the Sepulveda Boulevard & Venice Boulevard intersection. The Project is also located along Washington Boulevard, a designated Mixed-Use Corridor, defined as a residential, non-residential, and commercial corridor along which the Land Use Element seeks to intensify and mix land uses and to improve pedestrian experiences through parking management strategies, active street frontages, and public realm improvements. The Project proposes a desirable new mixed-use residential and commercial development that will activate the street frontage along Washington Boulevard. Thus, the mixed-use residential and commercial uses of the Project would be compatible with the goals for development along Mixed-Use Corridors designated by the Land Use Element.

Neighborhood Traffic Management Program

The City adopted a series of procedures for the implementation of NTMPs, as defined in the City's *Neighborhood Traffic Management Program (NTMP) Procedures Manual* (November 22, 2004). The Project is not projected to lead to trip diversion along residential Local Streets, nor is the Project projected to add a substantial amount of automobile traffic to congested Arterial Streets that could potentially cause a shift to residential Local Streets. Therefore, the Project would not be required to propose an NTMP for the surrounding residential neighborhoods.

Gateway Neighborhood Design Guidelines

The City's *Multi-Family Neighborhood Residential Design Guidelines – Gateway Neighborhood* (Adopted March 24, 2010) is intended to encourage new residential projects to be compatible with, maintain the integrity of, and preserve the unique character and best features of the Gateway Neighborhood by promoting desirable design qualities, guiding change in ways that are compatible with the existing neighborhood development pattern, and respecting the diversity and vitality of the neighborhood. The Project is not located within the Gateway Neighborhood and, therefore, *Multi-Family Neighborhood Residential Design Guidelines – Gateway Neighborhood* would not apply to the Project.

Gateway Adjacent Neighborhood Design Guidelines

The City's *Multi-Family Neighborhood Residential Design Guidelines – Gateway Adjacent Neighborhood* (July 13, 2011) is intended to encourage new residential projects to be compatible with, maintain the integrity of, and preserve the unique character and best features of the Gateway Adjacent Neighborhood by promoting desirable design qualities, guiding change in ways that are compatible with the existing neighborhood development pattern, and respecting the diversity and vitality of the neighborhood. The Project is not located within the Gateway Adjacent Neighborhood and, therefore, *Multi-Family Neighborhood Residential Design Guidelines – Gateway Adjacent Neighborhood* would not apply to the Project.

Residential Parkway Guidelines

The City's *Culver City Residential Parkway Guidelines* (2016) (Guidelines) inform the general public about parkway regulations and provides guidance on planning, creating, and maintaining a parkway landscape. Property owners are expected to maintain the parkway space adjacent to their properties, with the exception of street trees, which are maintained by the City. Sidewalk access and step-out strips are to be installed and maintained along all residential parkways in the City. These Guidelines are provided to address specifically residential areas. The Project is a residential project; however, it is along a commercial parkway. Therefore, *Culver City Residential*

Parkway Guidelines would not apply to the Project. Nevertheless, the Project will maintain the surrounding landscaping and sidewalks adjacent to the Project Site.

Upper Culver Crest Hillside Design Standards

Culver Crest: Recommendations for R-1 Neighborhood Hillside Development Standards (John Kaliski Architects, PlaceWorks, and RMA GeoScience, January 4, 2017) specifies a zoning code overlay for the Culver Crest residential community to ensure that the unique planning and development concerns of this hillside neighborhood are addressed. The Project is not located within the Upper Culver Crest community and, therefore, *Culver Crest: Recommendations for R-1 Neighborhood Hillside Development Standards* would not apply to the Project.

Short-Range Mobility Plan

Short-Range Mobility Plan (Culver CityBus, FY 2022-2026) provides a strategic blueprint designed to maintain a forward-thinking focus on improved mobility services with a continued dedication to customer service and fiscal responsibility. The plan provides an overview of the City's existing mobility services and policies that further improve mobility in the City, such as transit-oriented development and complete streets projects. Further, the plan proposes a variety of measures to improve mobility services, implement physical changes to transit facilities and roadways, and upgrade existing buses with fully electric vehicles. The Project would not conflict with any of the proposed changes in *Short-Range Mobility Plan*, and improvements made in the plan would likely enhance transit alternatives for residents, employees, and visitors to the site.

Bicycle and Pedestrian Action Plan

Culver City Bicycle & Pedestrian Action Plan seeks to promote a long-term vision for the City that would "ensure comfortable, safe, and attractive places to bike and walk so that these forms of active transportation become first choices for travelling around our city." Adjacent to the Project Site, Washington Boulevard has been identified for bicycle lane improvements. However, the Project would not interfere with any improvements proposed as part of the *Culver City Bicycle &*

Pedestrian Action Plan. Further, the Project would support active modes of transportation by providing bicycle parking and improving the pedestrian facilities adjacent to the Project frontage.

Complete Streets Policy

The City's *City of Culver City Complete Streets Policy* (Adopted January 13, 2020) intends to "promote healthy and sustainable mobility for Culver City residents and visitors by providing safe, convenient, and comfortable access to destinations throughout the City by walking, bicycling, transit, and autos." The policy sets a variety of goals and standards in the application of complete streets principles including improving mobility for all road users, enhancing safety, and creating a standard set of criteria applicable to all city departments and private developers who construct within the public ROW. The Project would incorporate the complete streets principles into the Project design to encourage multi-modal transportation options within the community.

Local Road Safety Plan

The City's *Local Roadway Safety Plan* (November 2021) (LRSP) is a document that enables the City to determine potential traffic safety projects on roadways and intersections within the City. In an effort to eliminate fatal and severe injury collisions, the document provides a comprehensive collisions analysis through the LRSP to identify high-risk corridors and intersections with the highest collision frequency and severity. Of the several high-risk intersections and street segments identified in the plan, Washington Boulevard is located adjacent to the Project Site. However, the Project would utilize one new and one existing driveway on Washington Boulevard that meet the street at a 90-degree angle and have no obstructed sightlines. Thus, the Project would not preclude the City from implementing improvements to eliminate fatal and severe injury collisions as part of the LRSP.

Vision Zero

The City adopted the Vision Zero initiative in 2016 and has incorporated policies and infrastructure improvements into *Culver City Bicycle & Pedestrian Action Plan*. The Project Site is located

adjacent to Washington Boulevard, which is identified in the City's HIN. Nevertheless, the Project would not preclude any Vision Zero improvements on this corridor as it is not proposed to be modified by the Project. Thus, the Project does not conflict with Vision Zero.

Section 4B:
VMT Analysis – Land Use Projects

Threshold B of the Guidelines analyzes whether a project causes substantial VMT and is generally applied to land use projects. Specifically, Threshold 4B inquires whether a project would conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)(1), which states that (for land use projects) "vehicle miles travelled exceeding an applicable threshold of significance may indicate a significant impact." This subdivision also states that a lead agency has discretion to choose the most appropriate method to evaluate a project's VMT.

Per the Guidelines, a "no impact" determination can be made for a project if any of the following screening criteria are met:

1. Small projects that result in less than 250 daily or 25 peak hour trips
2. Projects within 0.50 miles from the key TPAs of: Metro E Line Culver City Station, Metro E Line La Cienega Station, Westfield-Culver City Transit Center, or the Sepulveda Boulevard & Venice Boulevard intersection may be screened
3. Projects located within any TPA where at least 15% of the on-site residential units are affordable
4. Affordable housing projects where 100% of the dwelling units are affordable
5. Local serving retail projects with less than 50,000 sf in size at a single store

If none of the above screening criteria are met, the Guidelines provide guidance for the further analysis of VMT, as discussed in the following section.

PROJECT VMT ANALYSIS

Culver City VMT Tool (October 2021) (VMT Calculator) was used to conduct the VMT screening evaluation. Based on guidance from the City, the VMT Calculator was modeled for the Project's land uses and density as the primary input.

The detailed screening output from the VMT Calculator is provided in Appendix C.

The Project is located within 0.5 miles of the Sepulveda/Venice Intersection, a designated TPA, and more than 15% of the on-site residential units are affordable. Thus, no mitigation measures are required to address VMT, the Project is presumed to result in a less than significant VMT impact, and no further analysis is required. Nonetheless, as previously detailed, the Project would implement strategies and action plans as part of a comprehensive TDM program in compliance with the requirements set forth in CCMC Section 07.05.015 to reduce single occupancy vehicle trips while promoting the use of alternative transportation modes, thereby further reducing Project VMT.

Section 4C:
VMT Analysis – Transportation Projects

The intent of Threshold C is to assess whether a transportation project would induce substantial VMT by increasing vehicular capacity on the roadway network, such as the addition of through traffic lanes on existing or new highways, including general purpose lanes, high-occupancy vehicle lanes, peak period lanes, auxiliary lanes, and lanes through grade-separated interchanges.

The Project is not a transportation project that would induce automobile travel. Therefore, the Project would not result in a significant impact under Threshold C, and further evaluation is not required.

Section 4D:
Geometric Design Hazards Analysis

Section 4D of the Guidelines requires that potential on-street hazards be reviewed for all projects. This analysis focuses on the off-site conditions affected by the Project.

The analysis involved the review of existing vehicle-vehicle, vehicle-bicycle, and vehicle-pedestrian interactions on transportation infrastructure adjacent to the Project Site and the potential impacts and hazards of the Project on those interactions based on the following factors in Threshold D:

- Bicycle, pedestrian, auto and public transit network and facilities surrounding the Project Site and crossing project driveways
- Relative bicycle, pedestrian, auto, and public transit activity levels
- Existing environment and roadway conditions, such as slopes, curves, connectivity, proximity to intersections, and barriers
- Safety of vehicles accessing the Project driveways
- Sight lines at the driveways and surrounding the site
- Safety of pedestrians and bicyclists when crossing Project driveways
- Proximity of incompatible uses that could cause a transportation hazard

DRIVEWAY DESIGN FEATURES

Vehicular access to the Project Site would be provided by two separate driveways along Washington Boulevard that provide full access operations, including both right- and left-turn ingress and egress. Driveway A would provide commercial, guest, and residential access to Building A from a fire lane along the northeast side of the property, and Driveway B would provide residential access to Building B. Driveway B is an existing driveway, aligned with the west leg of

Prospect Avenue, that would need to be modified as part of the Project to meet City design standards.

The parking garage is intended to serve tenants and retail visitors in Building A and Building B. Level 1 of Building A would provide secure, gated residential parking adjacent to commercial parking on the same level. Level 1 of Building B would provide secure residential parking. Both buildings would provide ramps that lead to Level P1, a subterranean parking garage spanning both Building A and Building B that would provide additional residential spaces. The entire parking area for both buildings will be physically secured for safety.

Retail loading will be accessed from a fire lane along the northeast side of the property at Building A. With the square footage of nonresidential uses in the project, a 12'x40' loading area with 14' headroom clearance will be required. Trucks will access the loading area by traveling from west to east and then reversing into this loading zone. They will then exit to the west, back to Washington Boulevard. Materials will be transported directly from the loading area and through a corridor to the retail spaces.

Pedestrian access to the Project would be provided separate from vehicular access via lobby entrances and a public paseo accessed along Washington Boulevard.

The section of Washington Boulevard along which the Project driveways are situated provides four travel lanes, two in each direction, a center turn lane, a northbound right turn lane, and limited unmetered parking on both sides of the street. Sidewalks are provided on Washington Boulevard adjacent to the Project Site. No existing bicycle facilities are provided adjacent to the Project Site, however, the City has proposed Class II bike lane along Washington Boulevard in *Culver City Bicycle and Pedestrian Master Plan* or *Culver City Bicycle & Pedestrian Action Plan*. However, the Project would generate fewer than 5 vehicles per minute across the two driveways on Washington Boulevard. Thus, pedestrians and bicyclists would have adequate gaps in vehicular traffic at the driveways to safely cross, and the Project is unlikely to result in an increase in driveway conflicts. No exceptional horizontal or vertical curvatures exist along this section of roadway that would create sight distance issues for Project traffic utilizing the proposed driveways.

No unusual or new obstacles are presented in the Project's driveway design that would be considered hazardous to pedestrians, bicyclists, or motorists. All driveways will be subject to review by the City.

Pedestrian, Bicycle, and Transit Activity

Adequate sight distance would be provided at the Project driveways to ensure safety for all road users, including pedestrians, bicyclists, and motorists. The Project driveways would be designed to remain clear of hardscapes, vegetation, or signage that would impede sight lines.

Minimal pedestrian and bicycle traffic was observed to travel on Washington Boulevard adjacent to the Project Site. Based on the trip generation estimates detailed in Table 4, the Project would generate fewer than 5 vehicles per minute across the two driveways. Thus, pedestrians and bicyclists would have adequate gaps in vehicular traffic at the driveways to safely cross, and the Project is unlikely to result in an increase in vehicle-pedestrian or vehicle-bicycle conflicts. The Washington Boulevard / Prospect Avenue bus stop is adjacent to the Project Site, however, it is on the opposite side of Washington Boulevard from the Project, so no the sidewalk and bus stop would not be affected by construction. Therefore, the Project would not affect transit activity or access.

Physical Terrain

The Project Site is located on a flat parcel with little to no change in vertical elevation. Therefore, no line-of-sight issues would be caused by changes in elevation, and drivers would be able to safely identify approaching vehicles, pedestrians, and bicycles at the Project driveways. The driveways intersect the public ROW at 90-degree angles to the extent possible, with an adequate building setback to allow pedestrians and bicyclists to observe vehicles within the driveway.

Incompatible Uses

The Project would be compatible with the surrounding residential and commercial uses. Furthermore, no elements of the Project's uses or design would be considered incompatible.

Summary

Based on the site plan review and design, the Project does not present any geometric design features that would substantially increase hazards related to traffic movement, mobility, or pedestrian accessibility and, thus, Project impacts are considered less than significant.

Chapter 5

Supplemental Transportation Analysis

This chapter summarizes the supplemental transportation analysis of the Project, including Project traffic, access, safety, and circulation, as well as the Project's effect on nearby pedestrian, bicycle, and transit facilities. This chapter also summarizes the evaluation of the Project's operational conditions, parking supply and requirements, and potential effects due to Project construction.

Section 5 of the Guidelines identifies the following supplemental transportation analyses for reviewing potential transportation deficiencies that may result from a development project:

- Traffic Operations
- Transit Operations
- Driveways
- Parking
- Curb Space Allocation
- Safety Analysis

The supplemental transportation analyses were reviewed in detail in Sections 5A-5F. In addition, a review of the construction activities of the Project is provided in Section 5G.

Section 5A
Traffic Operations

This section assesses the ability of the circulation system to accommodate the addition of vehicular traffic generated by the Project and Related Projects.

OPERATIONAL ANALYSIS METHODOLOGY

Intersection peak hour operations were evaluated for typical weekday morning (7:00 AM to 9:00 AM) and afternoon (4:00 PM to 6:00 PM) periods. A total of four intersections in the vicinity of the Project Site were selected for detailed transportation analysis and are shown in Figure 3.

The following traffic conditions were developed and analyzed as part of this study:

- Existing with Project Conditions (Year 2025): This analysis condition projects the potential intersection operating conditions that could be expected if the Project were built under Existing Conditions.
- Future with Project Conditions (Year 2030): This analysis condition projects the potential intersection operating conditions that could be expected if the Project were occupied in the projected buildout year. In this analysis, the Project-generated traffic is added to Future without Project Conditions in Year 2030.
- Cumulative with Project Conditions (Year 2045): This analysis condition projects the potential intersection operating conditions that could be expected if the Project were occupied in the horizon year of the General Plan. In this analysis, the Project-generated traffic is added to Cumulative without Project Conditions in Year 2045.

Operational Evaluation

In accordance with the Guidelines, the intersection delay and queue analyses for the operational evaluation were conducted using the *Highway Capacity Manual, 6th Edition* (Transportation Research Board, 2016) (HCM) methodology, which was implemented using Synchro software and signal timing worksheets from the agency of jurisdiction to analyze intersection operating

conditions. The HCM signalized methodology calculates the average delay, in seconds, for each vehicle passing through the intersections, while the HCM unsignalized two-way stop-control methodology calculates the control delay, in seconds, for individual approaches of an intersection. Table 5 presents a description of the LOS categories, which range from excellent, nearly free-flow traffic at LOS A, to stop-and-go conditions at LOS F, for signalized intersections. The queue lengths were estimated using Synchro, which reports the 95th percentile queue length, in vehicles for each approach lane, which can be converted to linear feet by multiplying by 25 feet per vehicle. The reported queues are calculated using the HCM signalized and unsignalized intersection methodology.

LOS and queuing worksheets for each scenario are provided in Appendix D.

LOS ANALYSIS

The intersection analysis was conducted based on the HCM methodologies to identify delay and LOS at each of the study intersections with development of the Project. Detailed LOS calculation worksheets are provided in Appendix D.

Existing with Project Conditions

Traffic Volumes. The Project-only morning and afternoon peak hour traffic volumes, described in Chapter 3 and shown in Figure 14, were added to the existing morning and afternoon peak hour traffic volumes shown in Figure 7. The resulting volumes are illustrated in Figure 15 and represent Existing with Project Conditions, assuming Project operation under Existing Conditions.

Intersection LOS. Table 6 summarizes the weekday morning and afternoon peak hour LOS results for each of the study intersections under Existing and Existing with Project Conditions. As shown in Table 6, three out of four study intersections would operate at LOS C or better during both the morning and afternoon peak hours under Existing and Existing with Project Conditions. The remaining study intersection of Culver Boulevard & Elenda Street (Intersection #3) would operate at LOS F in the morning and afternoon peak hours under Existing Conditions and Existing with Project Conditions.

Driveway LOS. Table 6 also summarizes the weekday morning and afternoon peak hour LOS results for the two Project driveways under Existing and Existing with Project Conditions. The reported driveway delay is calculated using the HCM Two-Way Stop Control Unsignalized methodology, which calculates the control delay, in seconds, for each individual movement of an intersection. The reported control delay represents the worst-case movement, typically on the lower volume minor street, and does not account for traffic gaps created by adjacent traffic signals that allow turn movements to proceed from the minor street.

As shown in Table 6, Driveway A would operate at LOS D in the morning and afternoon peak hours under Existing with Project Conditions. Driveway B would operate at LOS D in the morning and afternoon peak hours under Existing Conditions and LOS F under Existing with Project Conditions.

Future with Project Conditions

All future cumulative traffic growth (i.e., ambient and Related Project traffic growth) and transportation infrastructure improvements through Year 2030 described in Chapter 2 were incorporated into this analysis.

Traffic Volumes. The Project-only morning and afternoon peak hour traffic volumes, described in Chapter 3 and shown in Figure 14, were added to the Future without Project (Year 2030) morning and afternoon peak hour traffic volumes shown in Figure 10. The resulting volumes are illustrated in Figure 16 and represent Future with Project Conditions after development of the Project in Year 2030.

Intersection LOS. Table 7 summarizes the results of the Future without Project and Future with Project Conditions (Year 2030) during the weekday morning and afternoon peak hours for the study intersections. As shown in Table 7, three out of four study intersections would operate at LOS C or better during both the morning and afternoon peak hours under Future without Project and Future with Project Conditions (Year 2030). The remaining study intersection of Culver Boulevard & Elenda Street (Intersection #3) would operate at LOS F in the morning and afternoon peak hours under Future without Project and Future with Project Conditions (Year 2030).

Driveway LOS. Table 7 also summarizes the weekday morning and afternoon peak hour LOS results for the two Project driveways under Future without Project and Future with Project Conditions (Year 2030). as detailed above, the reported driveway delay is calculated using the HCM Two-Way Stop Control Unsignalized methodology.

As shown in Table 7, Driveway A would operate at LOS D in the morning and LOS F in the afternoon peak hours under Future with Project Conditions (Year 2030). Driveway B would operate at LOS D in the morning and afternoon peak hours under Future without Project and LOS F in the morning and afternoon peak hours under Future with Project Conditions (Year 2030).

Cumulative with Project Conditions

All future cumulative traffic growth (i.e., ambient and Related Project traffic growth) and transportation infrastructure improvements through the General Plan horizon year of 2045 were incorporated into this analysis.

Traffic Volumes. The Project-only morning and afternoon peak hour traffic volumes, described in Chapter 3 and shown in Figure 14, were added to the Cumulative without Project (Year 2045) morning and afternoon peak hour traffic volumes shown in Figure 11. The resulting volumes are illustrated in Figure 17 and represent Cumulative with Project Conditions after development of the Project in Year 2045.

Intersection LOS. Table 8 summarizes the results of the Cumulative without Project and Cumulative with Project Conditions (Year 2045) during the weekday morning and afternoon peak hours for the study intersections. As shown in Table 8, three out of four study intersections would operate at LOS C or better during both the morning and afternoon peak hours under Cumulative without Project and Cumulative with Project Conditions (Year 2045). The remaining study intersection of Culver Boulevard & Elenda Street (Intersection #3) would operate at LOS F in the morning and afternoon peak hours under Cumulative without Project and Cumulative with Project Conditions (Year 2045).

Driveway LOS. Table 8 also summarizes the weekday morning and afternoon peak hour LOS results for the two Project driveways under Cumulative without Project and Cumulative with

Project Conditions (Year 2045). The reported driveway delay is calculated using the HCM Two-Way Stop Control Unsignalized methodology.

As shown in Table 8, Driveway A would operate at LOS E in the morning and LOS C in the afternoon under Future with Project Conditions (Year 2045). Driveway B would operate at LOS F under Future without Project and Future with Project Conditions (Year 2045).

INTERSECTION QUEUING ANALYSIS

The study intersections were also analyzed to determine whether the lengths of intersection turning lanes could accommodate vehicle queue lengths. The queue lengths were estimated using Synchro software, which reports the 95th percentile queue length, in feet, for each approach lane. The reported queues are calculated using the HCM signalized and unsignalized intersection methodology.

Detailed queuing analysis worksheets are provided in Appendix D.

DRIVEWAY ANALYSIS

Utilizing the same methodology for the intersection analyses, a driveway queuing analysis was conducted to determine whether the driveway and adjacent streets could accommodate vehicle queue lengths. The queue lengths were estimated using Synchro software, which reports the 95th percentile queue length, in feet, for each approach lane. The reported driveway queues are calculated using the HCM unsignalized intersection methodology.

Detailed driveway queuing analysis worksheets are provided in Appendix D.

SIGNAL WARRANT ANALYSIS

In order to assess whether the anticipated operating conditions at Washington Boulevard & Prospect Avenue would warrant the installation of a traffic signal, a signal warrant analysis was prepared for the intersection of Washington Boulevard & Prospect Avenue.

Empirical Data Collection

24-hour traffic volume data along Prospect Avenue was collected in February 2025 and is provided in Appendix B.

Accident data reported from Year 2020 through Year 2024 was also reviewed to identify the number of collisions that have occurred at Washington Boulevard & Prospect Avenue. No collisions were reported at this intersection during the five-year period.

Methodology

The signal warrant analysis was conducted based on the guidelines outlined in the current California Department of Transportation *California Manual on Uniform Traffic Control Devices* (California MUTCD).

The following methodologies, as quoted from the California MUTCD, were used to evaluate signal warrants:

Warrant 1, Eight-Hour Vehicular Volume

The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal. The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street. 03 It is intended that Warrant 1 be treated as a single warrant. If Condition A is satisfied, then Warrant 1 is satisfied and analyses of Condition B and the combination of Conditions A and B are not needed. Similarly, if Condition B is satisfied, then Warrant 1 is satisfied and an analysis of the combination of Conditions A and B is not needed.

Warrant 2, Four-Hour Vehicular Volume

The Four-Hour Vehicular Volume signal warrant conditions are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal.

Warrant 3, Peak-Hour Vehicular Volume Warrant

Signal Warrant 3 is intended for use at a location where traffic conditions are such that for a minimum of one hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street.

Warrant 4, Pedestrian Volume

The Pedestrian Volume signal warrant is intended for application where the traffic volume on a major street is so heavy that pedestrians experience excessive delay in crossing the major street.

Warrant 6, Coordinated Signal System

Progressive movement in a coordinated signal system sometimes necessitates installing traffic control signals at intersections where they would not otherwise be needed in order to maintain proper platooning of vehicles.

Warrant 7, Crash Experience

The Crash Experience signal warrant conditions are intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal.

Analysis Results

Based on the traffic volumes anticipated for the intersection and the results of the signal warrant analysis, Washington Boulevard & Prospect Avenue is projected to meet the minimum thresholds for Warrant 3, Peak Hour, under Cumulative with Project Conditions (Year 2045), as detailed in Appendix E. As such, the installation of a traffic signal may be warranted.

The intersection of Washington Boulevard & Prospect Avenue did not meet the minimum requirements of the remaining signal warrants evaluated. The detailed signal warrant analysis worksheets are provided in Appendix E.

Although the remaining signal warrants are not met, as discussed above, Washington Boulevard and Prospect Avenue are within SRTS Improvement Zones, and the signalization of this intersection may be of particular interest to enhance safety given its proximity to nearby schools.

NEIGHBORHOOD STREET CUT-THROUGH ANALYSIS

A neighborhood street cut-through analysis was conducted to determine potential increases in average daily traffic volumes on designated Local Streets, as classified in the Mobility Element, that can be identified as cut-through trips generated by the Project and that can adversely affect the character and function of those streets.

24-hour street segment counts were conducted in February 2025 along Prospect Avenue between Matteson Avenue and Washington Boulevard. Table 9 shows the existing, future buildout, and future cumulative conditions with and without the Project.

This analysis uses the City's significant project conditions thresholds for residential streets, which would not be considered significant impacts under CEQA:

Projected Average Daily Traffic (ADT) with Project	Project-Related Increase in ADT
999 or less	120 trips or more
1,000 – 1,999	12% or more of final ADT
2,000 – 2,999	10% or more of final ADT
3,000 or more	8% or more of final ADT

Counts were not able to be taken along Girard Avenue between Matteson Avenue and Washington Boulevard; therefore, the most conservative threshold (120 daily trips) was applied to this segment. Vehicle volumes were developed for the segment analysis in the same manner as the intersection analysis.

As shown in Table 9, the Project would not create significant project conditions on Prospect Avenue but will add more than 120 daily Project trips to Girard Avenue. As such, the City may require traffic calming improvement measures to minimize traffic on Girard Avenue.

Additionally, the Project is not anticipated to generate any diverted trips onto residential Local Streets because the majority of the fronting and adjacent Arterial Streets provide sufficient capacity to accommodate Project traffic and the anticipated levels of Project traffic on any of the congested corridors in the area would not be substantial enough to result in the diversion of any existing Arterial Streets trips.

TABLE 5
LEVEL OF SERVICE DEFINITIONS FOR INTERSECTIONS

Level of Service	Definition	Delay [a]	
		Signalized Intersections	Unsignalized Intersections
A	EXCELLENT. No vehicle waits longer than one red light and no approach phase is fully used.	0.0 - 10.0	0.0 - 10.0
B	VERY GOOD. An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles.	10.1 - 20.0	10.1 - 15.0
C	GOOD. Occasionally drivers may have to wait through more than one red light; backups may develop behind turning vehicles.	20.1 - 35.0	15.1 - 25.0
D	FAIR. Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive backups.	35.1 - 55.0	25.1 - 35.0
E	POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.	55.1 - 80.0	35.1 - 50.0
F	FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with continuously increasing queue lengths.	> 80.0	> 50.0

		Future Year (2030) ADT	Project Only	Future Year (2030) with Project	% of Final ADT	Significance Threshold	Significant Project Condition?
1.	Prospect Avenue between Matteson Avenue and Washington Boulevard	1,640	*	1,640	-	+12.0%	No
2. [a]	Girard Avenue between Matteson Avenue and Washington Boulevard	-	226	-	-	120 Trips	Yes

No	Location	Weekday Bidirectional Daily Volume			Segment Analysis		
		Cumulative Year (2045) ADT	Project Only	Cumulative Year (2045) with Project	% of Final ADT	Significance Threshold	Significant Project Condition?
1.	Prospect Avenue between Matteson Avenue and Washington Boulevard	1,874	*	1,874	-	+12.0%	No
2. [a]	Girard Avenue between Matteson Avenue and Washington Boulevard	-	226	-	-	120 Trips	Yes

Notes:
* A negligible number of Project trips
[a] Weekday bidirectional daily volumes were not available at this street segment. In the absence of volume data, the most conservative significance threshold of 120 Project-related trips was applied to determine if significant Project conditions occur.

Section 5B
Transit Operations

This section reviews the Project's potential effect on existing transit capacity of transit routes and stops that serve the Project area.

TRAVEL DEMAND ANALYSIS

Although the Project (and other Related Projects) will cumulatively add transit ridership, the Project Site and the Study Area are served by multiple bus lines, as detailed in Table 2. As illustrated in Figure 6, the nearest stops to the Project Site are located at Washington Boulevard / Prospect Avenue, Washington Boulevard / Elenda Street and Elenda Street / Oregon Avenue, serving Culver CityBus Line 1 and Line 5. The Washington Boulevard / Prospect Avenue and Washington Boulevard / Elenda Street stops have a bench and bus shelter, and the Elenda Street / Oregon Avenue stop has sparce tree cover.

Based on the assumptions in the trip generation estimates shown in Table 4, a transit/walk-in reduction of up to 10% was applied to account for the use of non-auto travel modes (e.g., transit). The Project trips expected to use transit during both the morning and afternoon peak hour trips are projected at 33 vehicle-transit trips each. Based on the average vehicle occupancy factor of 1.55 for all trip purposes in Los Angeles County as identified in *SCAG Regional Travel Demand Model and 2012 Model Validation* (Southern California Association of Governments, March 2016), the peak hour vehicle-transit trips correspond to an estimated equivalence of 52 person-transit trips in each of the morning and afternoon peak hours. The adjacent transit capacity within the Study Area can accommodate the intensification of transit usage attributable to the Project without significantly absorbing excess capacity.

Section 5C
Driveways

This section provides a qualitative evaluation of the Project vehicle, pedestrian, and bicycle access per Section 5C of the Guidelines.

VEHICLES

Vehicular access to the Project Site would be provided by two separate driveways along Washington Boulevard that provide full access operations, including both right- and left-turn ingress and egress along Washington Boulevard. Driveway A would provide commercial, guest, and residential access to Building A from a fire lane along the northeast side of the property, and the Driveway B would provide residential access to Building B. Driveway B is an existing driveway that would need to be modified as part of the Project to meet City design standards.

The driveways would be designed to safely accommodate all anticipated vehicle types generated by the Project. Adequate internal circulation and queuing area would be provided on-site to limit spillover into the public ROW. All parking on-site would be self-parking. The commercial, rubbish, delivery, and residential move-in loading zones would utilize both fire roads adjacent to the Project.

PEDESTRIANS AND BICYCLES

Pedestrian and bicycle access to the Project Site would be provided separately from the vehicular driveways via separate entrances along Washington Boulevard to reduce potential vehicle-pedestrian and vehicle-bicycle conflicts. Furthermore, the Project would include landscaping and curb cut and drive aisle improvements to ensure maximum visibility and meet City design guidelines.

Section 5D
Parking

This section provides an analysis of the proposed parking and the potential parking impacts of the Project.

PARKING SUPPLY

The Project would provide vehicle and bicycle parking spaces within two grade-level parking garages plus one subterranean parking garage.

In October 2022, the City Council passed a motion that eliminated minimum parking requirements citywide. As a result, no parking is required to be constructed by code. However, the Project would provide a supply of 715 vehicle parking spaces, 30 commercial and 685 residential.

The Level 1 parking entrances would lead to two at-grade parking garages, providing 30 commercial and guest spaces and 40 residential spaces on Level 1 of Building A and 39 residential spaces on Level 1 of Building B. The Level P1 parking entrances would provide ramps that lead to one subterranean parking garage spanning both Building A and Building B, providing 606 residential spaces. The entire parking area for both buildings will be physically secured for safety.

BICYCLE PARKING CODE REQUIREMENTS

CCMC Section 17.320 details the bicycle parking requirements for new developments.

As shown in Table 10, the Project would be required to provide 20 short-term and 134 long-term bicycle parking spaces, for a total of 154 parking spaces. The Project proposes to provide 154 parking spaces, which meets the CCMC requirement.

TABLE 10
BICYCLE CODE PARKING REQUIREMENTS

Land Use	Size	Short-Term		Long-Term	
		Rate [a]	Requirement	Rate [a]	Requirement
Residential					
201+ dwelling units	508 du	1.0 sp / 40 du	13 sp	1.0 sp / 4.0 du	127 sp
Commercial	14,087 sf	1.0 sp / 2,000 sf	7 sp	1.0 sp / 2,000 sf	7 sp
		Total Short-Term	**20 sp**	**Total Long-Term**	**134 sp**
				Total Bicycle Code Parking Requirement	**154 sp**
				Total Bicycle Parking Provided	**154 sp**

Notes:

[a] Bicycle parking requirements per City of Culver City Municipal Code Section 17.320.

Section 5E
Curb Space Allocation

This section details our review of the management of curb space adjacent to the Project Site between passenger and commercial loading and parking areas, bus stop facilities, and bicycle and other alternative transportation mode parking while maintaining visibility at driveways.

ON-STREET PARKING

As previously detailed, the on-street unmetered parking spaces along Washington Boulevard within the vicinity of the Project Site would be maintained with development of the Project. The existing red curb adjacent to the Project Site would be maintained as necessary to provide adequate visibility for vehicles exiting the Project Site.

PASSENGER AND COMMERCIAL LOADING

All passenger and commercial loading would be provided on-site and would not affect the adjacent curb space adjacent to the Project Site.

TRANSIT FACILITIES

The Washington Boulevard / Prospect Avenue bus stop is adjacent to the Project Site; however, it is on the opposite side of Washington Boulevard from the Project. Therefore, transit stops would not affect visibility at the Project driveway.

BICYCLE PARKING FACILITIES

There are currently no existing or proposed public bicycle parking facilities adjacent to the Project Site along Washington Boulevard. In addition, the Project does not propose the installation of bicycle parking within the public ROW. Therefore, no bicycle parking facilities are anticipated to affect visibility at the Project driveway.

Section 5F
Safety Analysis

This section details the Project's potential effects on corridors within the HIN identified in *Culver City Bicycle & Pedestrian Action Plan*, as well as the Project's proximity to high-risk corridors and intersections where pedestrian and bicycle involved collisions have been recorded by the City as part of the LRSP.

VEHICULAR SAFETY

The Project Site is located adjacent to Washington Boulevard, which is identified as part of the HIN in *Culver City Bicycle & Pedestrian Action Plan*. However, as previously discussed, the Project would ensure that the two driveways are designed in accordance with City standards to maximize sight lines and limit potential vehicle-vehicle, vehicle-pedestrian, and vehicle-bicycle conflicts. Adequate distance between the two driveways would be provided to allow visibility between drivers exiting either driveway. Similarly adequate distance would be provided between the Driveway A and the intersection of Washington Boulevard & Elenda Street to the north of the Project Site as well as between Driveway B and the intersection of Washington Boulevard & Huron Avenue to the south.

PEDESTRIAN AND BICYCLE SAFETY

As previously detailed, Washington Boulevard is identified as part of the HIN and is identified in the LRSP as an area with high levels of collisions involving pedestrians and bicyclists. Therefore, the Project would improve the curb cuts for the Project driveways to meet Americans with Disabilities Act standards and improve existing sidewalks with landscaping adjacent to the Project frontage.

Section 5G
Construction Impact Analysis

This section summarizes the construction schedule and construction activities associated with the Project. The quantities for trucks and worker activity are preliminary estimates and these values may change once the construction program is finalized.

PROPOSED CONSTRUCTION SCHEDULE

The Project is anticipated to be constructed over an approximately 42-month period, with completion anticipated in Year 2030 and the first units completed at 36 months. Peak haul truck activity occurs during the demolition phase and peak worker activity occurs during the building construction phase. These two phases of construction were studied in greater detail.

DEMOLITION PHASE

With the implementation of the Construction Management Plan, which is described in more detail below, it is anticipated that almost all haul truck activity to and from the Project Site would occur outside of the morning and afternoon peak hours. In addition, as discussed in more detail in the following section, worker trips to and from the Project Site would also occur outside of the peak hours. Therefore, no peak hour construction traffic constraints are expected during the demolition phase of construction.

Haul trucks would travel on approved truck routes designated within the City and take the most direct route to the appropriate freeway ramps. The haul route will be reviewed and approved by the City.

Demolition Phase Trip Generation

Based on projections compiled for the Project, approximately 100,000 cubic yards (CY) of material would be excavated and removed from the Project Site. It is anticipated that a maximum of 120 haul truckloads per workday, based on an anticipated haul truck capacity of 14 CY would be required during this phase. Thus, up to 240 daily truck trips (120 inbound, 120 outbound) are forecasted to occur during the demolition period, with approximately 40 trips per hour uniformly over a typical six-hour off-peak hauling period.

In addition, a maximum of 36 daily construction worker trips are anticipated during the demolition phase. The 36 construction worker trips would result in 72 one-way vehicle trips (36 inbound, 36 outbound) to and from the Project Site on a daily basis. It is anticipated that the majority of workers would arrive on-site prior to the weekday morning commuter peak hour and leave prior to or after the afternoon commuter peak hour. Construction-related peak hour trip generation from trucks and workers would be substantially less than the Project trip generation estimates in Table 4. Therefore, no peak hour construction traffic constraints are expected during the demolition phase of construction.

BUILDING CONSTRUCTION PHASE

During the building construction phase, parking for construction workers would generally be provided on-site or in local public parking facilities. Restrictions against workers parking in the public ROW in the vicinity of (or adjacent to) the Project Site would be identified as part of the Construction Management Plan. Construction materials storage and truck staging would generally be contained on-site; however, some work may necessitate temporary closures along the public ROW along Washington Boulevard.

The traffic constraints associated with construction workers depend on the number of construction workers employed during various phases of construction, as well as the travel mode and travel time of the workers. In general, the hours of construction typically require workers to be on-site before the weekday morning commuter peak period and allow them to leave before or after the afternoon commuter peak period (i.e., arrive at the site prior to 7:00 AM and depart before 4:00

PM or after 6:00 PM). Therefore, most, if not all, construction worker trips would occur outside of the typical weekday commuter peak periods.

According to construction projections prepared for the Project, the building construction phase would employ the most construction workers, with a maximum of 255 workers per day. The estimated number of daily vehicle trips associated with the construction workers is approximately 510 one-way trips (255 inbound, 255 outbound), but nearly all those trips would occur outside of the peak hours, as described above. As such, the building construction phase of Project construction is not expected to cause traffic constraints at any of the study intersections.

POTENTIAL CONSTRAINTS ON ACCESS, TRANSIT, AND PARKING

Project construction is not expected to create hazards for roadway travelers, bus riders, or parkers, so long as commonly practiced safety procedures for construction are followed. Such procedures and other measures (e.g., to address temporary traffic control, lane closures, sidewalk closures, etc.) have been incorporated into the Construction Management Plan.

Access

Construction activities are expected to be primarily contained within the Project Site boundaries. However, it is expected that construction fences may intermittently encroach into the public ROW (e.g., sidewalks and roadways) adjacent to the Project Site, including the adjacent parking. However, two-way operations would be maintained on Washington Boulevard. Temporary traffic controls would be provided to direct traffic around any closures as required in the Construction Management Plan and emergency access would not be impeded.

The use of the public ROW would require temporary re-routing of pedestrian and bicycle traffic. The Construction Management Plan would include measures to ensure pedestrian and bicycle safety along the affected sidewalks, bicycle facilities, and temporary walkways (e.g., use of light-duty barriers and cones, use of directional signage, maintaining continuous and unobstructed pedestrian paths, and/or providing overhead covering).

Transit

The Washington Boulevard / Prospect Avenue bus stop is adjacent to the Project Site; however, it is on the opposite side of Washington Boulevard from the Project Site. Thus, no temporary bus stop relocation is anticipated due to the construction of the Project.

Parking

The adjacent parking spaces along Washington Boulevard are anticipated to be intermittently closed for staging and other construction activities. Thus, construction activities would potentially result in the temporary loss of up to 6 unmetered public parking spaces along Washington Boulevard.

CONSTRUCTION MANAGEMENT PLAN

A detailed Construction Management Plan, including street closure information, a detour plan, haul routes, and a staging plan would be prepared and submitted to the City for review and approval prior to commencing construction. The Construction Management Plan would formalize how construction would be carried out and identify specific actions that would be required to reduce effects on the surrounding community. The Construction Management Plan shall be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site, and shall include, but not be limited to, the following elements, as appropriate:

- Advance bilingual notification of adjacent property owners and occupants of upcoming construction activities, including durations and daily hours of operation.
- Temporary pedestrian, bicycle, and vehicular traffic controls during all construction activities on Washington Boulevard to ensure traffic safety on the public ROW. These controls shall include, but not be limited to, flag people trained in pedestrian and bicycle safety.
- Scheduling of construction activities to reduce the effect on traffic flow on surrounding arterial streets.
- Spacing of trucks to discourage a convoy effect.
- Containment of construction activity within the Project Site boundaries to the extent feasible.

- Safety precautions for pedestrians and bicyclists through such measures as alternate routing and protection barriers shall be implemented as appropriate.

- Scheduling of construction-related deliveries, haul trips, etc., to occur outside the commuter peak hours.

- Maintenance of a log, available on the job site at all times, documenting the dates of hauling and the number of trips (i.e., trucks) per day.

- Identification of a construction manager and provision of a telephone number for any inquiries or complaints from residents regarding construction activities. The telephone number shall be posted at the site readily visible to any interested party during site preparation, grading, and construction.

It is likely that construction management plans would also be submitted for approval to the City by the Related Projects prior to the start of construction activities. As part of the City's established review process of construction management plans, potential overlapping construction activities and proposed haul routes would be reviewed to minimize the impacts of cumulative construction activities on any particular roadway.

Chapter 6

Summary and Conclusions

This study was undertaken to analyze the potential transportation impacts of the mixed-use office development Project on regional VMT as well as the local street system. The following summarizes the results of this analysis:

- The Project is located at 10950 Washington Boulevard.
- The Project proposes the demolition of two existing office buildings and the construction of a new, mixed-use residential and commercial project with a public outdoor paseo. The redevelopment would include a total of 508 housing units, including 79 units of affordable housing, and 14,087 sf of ground-floor, neighborhood-serving commercial space, replacing the existing 160,438 sf of office. The Project is anticipated to be completed in Year 2030.
- The Project is estimated to generate 1,508 net new daily trips, including 46 net new morning peak hour trips (-102 inbound trips, 148 outbound trips) and 57 net new afternoon peak hour trips (127 inbound trips, -70 outbound trips).
- The Project is consistent with the City plans, programs, ordinances, and policies and would not result in geometric design hazard impacts.
- The Project was not required to perform a VMT analysis because it is located within 0.5 miles of a designated TPA and more than 15% of the on-site residential units are affordable. Thus, no mitigation measures are required to address VMT, and the Project is presumed to result in a less than significant VMT impact.
- The Project provides adequate internal circulation to accommodate vehicular, pedestrian, and bicycle traffic without impeding traffic movements on City streets.
- The design of Project driveways does not introduce safety hazards for pedestrians, bicyclists, or motorists.
- The Project will incorporate pedestrian and bicycle-friendly designs, such as bicycle parking and improved sidewalks with landscaping adjacent to the Project Site.
- All construction activities would occur outside of the commuter morning and afternoon peak hours to the extent feasible and will not result in significant traffic impacts. A Construction Management Plan will ensure that construction impacts are less than significant.

- The Project's proposed parking supply would satisfy the CCMC bicycle parking requirements.

Memorandum of Understanding

Memorandum of Understanding for Transportation Study

This Memorandum of Understanding (MOU) acknowledges and agrees to all the City of Culver City requirements and fees for the review of a transportation study for the following project.

Date Submitted: _____ **MOU Version #** 2

Project Name: 10950 Washington Boulevard

Project Address: 10950 Washington Boulevard, Culver City, CA 90232

Project Description: Building A: 248 du & 14,087 sf restaurant; Building B: 260 du

Land Use	Gross Floor Area (sq. ft.) *Defined per latest ITE publication*	Residential Units (#)
Affordable Housing		80
Multi-Family Housing		428
High-Turnover (Sit-Down) Restaurant	14,087	

Project Horizon Year: 2027 **Ambient Growth Rate (% per year):** 1%

Directional Distribution (%): N: 35 S: 35 E: 15 W: 15

Trip Generation Rates: Show AM, PM and daily trip generation rates for each land use and attach total daily trips generation calculations. Indicate ITE Latest Edition/Other ITE 11th Ed

Land Use	ITE Code#	AM Trips		PM Trips		Daily Totals	
		In	Out	In	Out	In	Out
See Table 2							

Study Intersections: Show all study intersections, intersections subject to capacity analysis credit for advanced traffic signal control synchronization, whether intersections are signalized or non-signalized, and use the same numbering system for all lists of intersections and figures in the study.

No.	Intersection	Signalized/Non-Signalized	Jurisdiction
	See Table 3		

Residential Streets: Show all residential streets to be studied.

No.	Street Name	Limits	Jurisdiction
	N/A		

Trip Credits: Indicate trip credits to be requested (subject to City approval)

	Trip Credits	Yes/No
Existing Uses		Yes
Pass-By Trips		Yes
Internal Trip Capture		Yes
Transit-Oriented Development (TOD)		No
Transportation Demand Management (TDM)		No

Related Projects: Before the start of any proposed project analysis, consultants shall:

1. Obtain a list of related projects from the Culver City Current Planning Division and other affected jurisdictions.
2. Prepare a draft list of "related projects specific to the proposed project."
3. Obtain written approval from the City of the "related projects specific to the proposed project."

Maps: The following maps shall be attached to the MOU:

1. A map showing the study intersections and street segments to be analyzed, including City limit lines where applicable.
2. A map showing the project's trip distribution percentages for each land use (inbound and outbound) on the area's road network.
3. A map showing the project's trip assignments at the study intersections and project driveways, as well as road segments when applicable.
4. A site plan of the project showing property lines, alleys, project's driveways and nearby driveways and intersections on both sides of the street including dimensions.

Proposed Mitigation and Transportation Improvements: Any proposed transportation improvement(s) or mitigation measure(s) shall be listed and accompanied by plans of the existing and proposed improvements, including city limit lines and existing and proposed property lines. The City may initially accept conceptual plans to be included in the Transportation Study. Detailed design of such improvements will be part of the project's plans submittals.

Post-Occupancy Traffic Counts: By signing below, the Property Owner/ Developer/Applicant hereby agrees to pay for and submit to the City a post-occupancy traffic count analysis of the development to the satisfaction of the City. The analysis shall determine the amount of actual traffic (motor vehicle, bicycle, and pedestrian) generated by the development compared to the ITE trip generation rates. The analysis shall include a traffic count of all onsite driveways taken upon reaching eighty-five percent (85%) occupancy of the total building gross floor area or within one (1) year of the issuance of the first Temporary Certificate of Occupancy (TCO), as determined by the City. The data shall be used to confirm the findings in the approved study and not result in any additional traffic mitigation measures and/or conditions of approval on the subject project.

Fees: Payment of a fee to the City's PWD for the City's processing of the MOU shall be required before the City approves the MOU. Payment for review of the Transportation Study shall be paid before the City's PWD completes its review of the Transportation Study. Said fees shall be per the most recent Fee Schedule as approved by the City Council.

TABLE 1
CULVER CITY TRANSPORTATION STUDY SCREENING REVIEW

Analysis [a]	Required?	Analysis to be Provided in Transportation Study
Transportation Study Contents		
Site Plan Review	Yes	A site plan will be provided which provides existing and proposed on-site and off-site Project details and improvements as specified in the Transportation Study Guidelines.
Existing Transportation Network Review	Yes	The existing transportation network review will establish the bicycle, pedestrian, transit, and auto traffic conditions in which the project is proposed, which shall be illustrated in the following maps: ▪ Study Area Circulation Map ▪ Traffic Routes Map ▪ Base Year Traffic Volumes Map ▪ Project Trip Generation and Future Traffic Volumes Map ▪ Site Vicinity Map ▪ Lane Configurations Map
Existing Transit Network Review	Yes	For transit analysis, the study will provide an analysis of weekday transit service and stops/stations within a quarter mile of the project site, including: ▪ Confirmation of transit features listed in the Project Description and Existing Transportation Network Review ▪ Any existing operational conflicts or hazards to transit operations in the study area, especially along travel lanes where transit vehicles operate and at transit stop/station locations
CEQA Transportation Analysis and Mitigations		
Programs, Plans, Ordinances, and Policies	Yes	The study will review the City's programs, plans, ordinances and policies addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities, as specified in Table 1 of the *Culver City Transportation Study Criteria and Guidelines* .
VMT - Land Use Projects	No	The proposed development project does not meet the screening thresholds for a VMT analysis. The Project is located within 0.5 miles of the Sepulveda Boulevard & Venice Boulevard Intersection identified as a key Transit Priority Area. Additionally, the Project proposes local serving retail uses of less than 50,000 sf. The study will discuss the VMT screening thresholds and the Project's consistency with the guidelines.
VMT - Transportation Projects	No	The proposed development is not considered a "Transportation Project" and therefore, it is not conflicting or inconsistent with CEQA Guideline Section 15064.3(b)(2).
Geometric Design Hazards	Yes	The study will provide a review of potentially hazardous conditions due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., oversized vehicles).

Notes:
[a] Based on *Culver City Transportation Study Criteria and Guidelines*, City of Culver City, July 2020.

TABLE 1 (CONTINUED)
CULVER CITY TRANSPORTATION STUDY SCREENING REVIEW

Analysis [a]	Required?	Analysis to be Provided in Transportation Study
Supplemental Transportation Analysis Requirements		
Traffic Operations	Yes	The study will assess the ability of the circulation system to accommodate the addition of vehicular traffic generated by the related projects and the subject project, including: ▪ Intersection LOS and queuing including trip generation, distribution under Existing, Existing with Project, Future without Project, Future with Project, Cumulative without Project, and Cumulative with Project Conditions ▪ Driveway LOS and queuing including potential vehicular conflicts, motorists' visibility at project driveways, and potential conflicts with pedestrians and bicyclists, ▪ Ability to conduct loading operations on the site and maneuver into parking stalls ▪ The potential increase in average daily traffic on the adjacent street segments
Transit Operations	Yes	The study will identify regional and local fixed-route transit operators providing service to the project and obtain relevant ridership data. The study will document potential project trip impact on transit demand and capacity for routes servicing the project.
Driveways	Yes	The study will provide a review of the Project driveways and consult with the City Mobility & Traffic Engineering and Current Planning Divisions to determine if vehicle access is limited on certain streets where the City is focusing on efforts to enhance the pedestrian-oriented environment. A pedestrian and bicyclist access assessment would also be included to ensure the project avoids unsafe conflicts between pedestrians, cyclists, and autos.
Parking	Yes	The study will review the Project's effect on the on-street parking conditions adjacent to the Project Site and ensure compliance with PWD's guidelines.
Curb Space Allocation	Yes	The study will review the proposed curb space allocation to ensure that the curb space is managed appropriately between passenger and commercial loading and parking, bus stop facilities, and bike and other alternative transportation mode parking while maintaining visibility at driveways.
Safety Analysis	Yes	The Project is not located on a high injury network (HIN) street, as identified in the Local Road Safety Plan (LRSP) or other analysis. The study will evaluate the adverse effect of the project and associated measures to enhance safety conditions. If it is determined that the project would have an adverse effect on a HIN corridor including intersections and road segments, the applicant shall work with the City's PWD to improve roadway safety at impacted locations for all users, including the design and construction of engineering measures and possibly safety education measures. The applicant shall also work with the City to confirm that the project does not inhibit future implementation of projects identified by the City in the LRSP. The LRSP will also be reviewed to determine if the project is located near a hot spot of collisions that involve people walking and bicycling. If this is the case, the applicant shall demonstrate how project features will not worsen the issue per the LRSP.

ksf: 1,000 square feet, du: dwelling unit
[a] Source: AM and PM Peak Hour Rates: *Trip Generation, 11th Edition* , Institute of Transportation Engineers, 2021.
[b] The Project site is located within 0.25 miles of bus stops for several Culver CityBus lines. Therefore, a 10% transit reduction was applied to account for transit usage and walking visitor arrivals.
[c] Internal capture reductions account for person trips made between distinct land uses within a mixed-use development (i.e., between residential and retail).
[d] Pass-by reductions account for Project trips made as an intermediate stop on the way from an origin to a primary trip destination without route diversion.

Project Screening

Apply to Full Project

Is this project within ½ mile of one of the following transit hubs? - Culver City Expo Station - La Cienega/Jefferson Expo Station - Westfield-Culver City Transit Center - Sepulveda/Venice intersection	Yes
Is the project located within any TPA and are at least 15% of the on-site residential units are affordable?	Yes
Does this project generate fewer than 250 daily trips?	N/A

Apply to Specific Land Uses

Is the retail component of project fewer than 50,000 square feet in size at every store?	No
Is this residential component of the project 100% affordable housing?	N/A

Project Daily Trips N/A

Project Land Use

Residential	Value (du)

VMT Analysis Worksheets

Culver CITY VMT Tool

No analysis required. This project meets the screening criteria.

Project Name

10950 Washington Boulevard

Project Parcel Click here for parcel viewer

4208024002

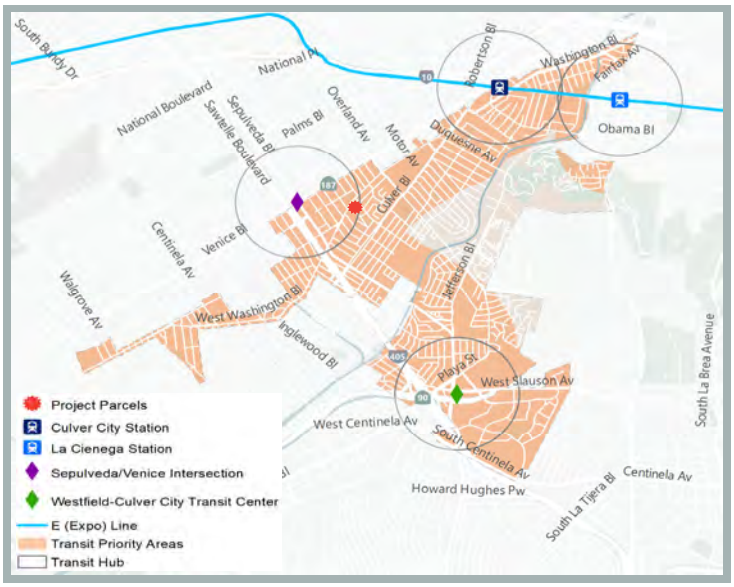
Project Screening

Apply to Full Project

Is this project within ½ mile of one of the following transit hubs? - Culver City Expo Station - La Cienega/Jefferson Expo Station - Westfield-Culver City Transit Center - Sepulveda/Venice intersection	Yes
Is the project located within any TPA and are at least 15% of the on-site residential units are affordable?	Yes
Does this project generate fewer than 250 daily trips?	N/A

Apply to Specific Land Uses

Is the retail component of project fewer than 50,000 square feet in size at every store?	No
Is this residential component of the project 100% affordable housing?	N/A



Project Daily Trips N/A

Project Land Use

Residential	Value (du)
Single Family	
Multi-Family	428
Affordable Housing	
Family	79
Senior	
Special Needs	
Permanent Supportive	

Office	Value (ksf)
Standard	

Medical	Value (ksf)
Medical Office	
Hospital	

Industrial	Value (ksf)
Light Industrial	
Manufacturing	
Warehousing / Self-Storage	

Movie Studio	Value (ksf)
Office	
Post Production	
Stage	
Support	

The following land uses will require separate impact analysis (outside of this tool) if not screened out. Please leave the land uses in the table below if they are part of a mixed use project.

Retail	Value (ksf)
General	
Supermarket	
Bank	
Health Club	
Gas Station	
Auto Repair	
Home Improvement Superstore	
Free-Standing Discount	
Restaurant Non-fast-food	14.087
Restaurant Fast-food	

	Value (seats)
Theater w/ Matinee	

Hotel	Value (rooms)
Hotel	
Motel	

School	Value (students)
University	
High School	
Middle School	
Elementary

Signal Warrant Analysis Worksheets

CHAPTER 4C. TRAFFIC CONTROL SIGNAL NEEDS STUDIES

Section 4C.01 Studies and Factors for Justifying Traffic Control Signals

Standard:

01 **An engineering study of traffic conditions, pedestrian characteristics, and physical characteristics of the location shall be performed to determine whether installation of a traffic control signal is justified at a particular location.**

01a **On State highways, the engineering study shall include consideration of a roundabout (yield control). If a roundabout is determined to provide a viable and practical solution, it shall be studied in lieu of, or in addition to a traffic control signal.**

Guidance:

01b *On local streets and highways, the engineering study should include consideration of a roundabout (yield control). If a roundabout is determined to provide a viable and practical solution, it should be studied in lieu of, or in addition to a traffic control signal.*

Support:

01c Refer to Caltrans' website (http://www.dot.ca.gov/hq/traffops/liaisons/ice.html) for more information on the Traffic Operations Policy Directive 13-02, Intersection Control Evaluation (ICE), and other resources for the evaluation of intersection traffic control strategies.

02 **The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:**

Warrant 1, Eight-Hour Vehicular Volume
Warrant 2, Four-Hour Vehicular Volume
Warrant 3, Peak Hour
Warrant 4, Pedestrian Volume
Warrant 5, School Crossing
Warrant 6, Coordinated Signal System
Warrant 7, Crash Experience
Warrant 8, Roadway Network
Warrant 9, Intersection Near a Grade Crossing

03 **The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.**

Support:

04 Sections 8C.09 and 8C.10 contain information regarding the use of traffic control signals instead of gates and/ or flashing-light signals at highway-rail grade crossings and highway-light rail transit grade crossings, respectively.

Guidance:

05 *A traffic control signal should not be installed unless one or more of the factors described in this Chapter are met.*

06 *A traffic control signal should not be installed unless an engineering study indicates that installing a traffic control signal will improve the overall safety and/or operation of the intersection.*

07 *A traffic control signal should not be installed if it will seriously disrupt progressive traffic flow.*

08 *The study should consider the effects of the right-turn vehicles from the minor-street approaches. Engineering judgment should be used to determine what, if any, portion of the right-turn traffic is subtracted from the minor-street traffic count when evaluating the count against the signal warrants listed in Paragraph 2.*

09 *Engineering judgment should also be used in applying various traffic signal warrants to cases where approaches consist of one lane plus one left-turn or right-turn lane. The site-specific traffic characteristics should dictate whether an approach is considered as one lane or two lanes. For example, for an approach with one lane for through and right-turning traffic plus a left-turn lane, if engineering judgment indicates that it should be considered a one-lane approach because the traffic using the left-turn lane is minor, the total traffic volume approaching the intersection should be applied against the signal warrants as a one-lane approach. The*

approach should be considered two lanes if approximately half of the traffic on the approach turns left and the left-turn lane is of sufficient length to accommodate all left-turn vehicles.

10 *Similar engineering judgment and rationale should be applied to a street approach with one through/left-turn lane plus a right-turn lane. In this case, the degree of conflict of minor-street right-turn traffic with traffic on the major street should be considered. Thus, right-turn traffic should not be included in the minor-street volume if the movement enters the major street with minimal conflict. The approach should be evaluated as a one-lane approach with only the traffic volume in the through/left-turn lane considered.*

11 *At a location that is under development or construction and where it is not possible to obtain a traffic count that would represent future traffic conditions, hourly volumes should be estimated as part of an engineering study for comparison with traffic signal warrants. Except for locations where the engineering study uses the satisfaction of Warrant 8 to justify a signal, a traffic control signal installed under projected conditions should have an engineering study done within 1 year of putting the signal into stop-and-go operation to determine if the signal is justified. If not justified, the signal should be taken out of stop-and-go operation or removed.*

12 *For signal warrant analysis, a location with a wide median, even if the median width is greater than 30 feet, should be considered as one intersection.*

Option:

13 At an intersection with a high volume of left-turn traffic from the major street, the signal warrant analysis may be performed in a manner that considers the higher ~~of the major-street left-turn volumes as the "minor-street" volume and the corresponding single direction of opposing traffic on the major street as the "major-street" volume~~ volume of the major-street left-turn volumes plus the higher volume minor-street approach as the "minor street" volume and both approaches of the major street minus the higher of the major-street left-turn volume as "major street" volume.

14 For signal warrants requiring conditions to be present for a certain number of hours in order to be satisfied, any four sequential 15-minute periods may be considered as 1 hour if the separate 1-hour periods used in the warrant analysis do not overlap each other and both the major-street volume and the minor-street volume are for the same specific one-hour periods.

15 For signal warrant analysis, bicyclists may be counted as either vehicles or pedestrians.

Support:

16 When performing a signal warrant analysis, bicyclists riding in the street with other vehicular traffic are usually counted as vehicles and bicyclists who are clearly using pedestrian facilities are usually counted as pedestrians.

Option:

17 Engineering study data may include the following:

A. The number of vehicles entering the intersection in each hour from each approach during 12 hours of an average day. It is desirable that the hours selected contain the greatest percentage of the 24-hour traffic volume.
B. Vehicular volumes for each traffic movement from each approach, classified by vehicle type (heavy trucks, passenger cars and light trucks, public-transit vehicles, and, in some locations, bicycles), during each 15-minute period of the 2 hours in the morning and 2 hours in the afternoon during which total traffic entering the intersection is greatest.
C. Pedestrian volume counts on each crosswalk during the same periods as the vehicular counts in Item B and during hours of highest pedestrian volume. Where young, elderly, and/or persons with physical or visual disabilities need special consideration, the pedestrians and their crossing times may be classified by general observation.
D. Information about nearby facilities and activity centers that serve the young, elderly, and/or persons with disabilities, including requests from persons with disabilities for accessible crossing improvements at the location under study. These persons might not be adequately reflected in the pedestrian volume count if the absence of a signal restrains their mobility.
E. The posted or statutory speed limit or the 85th-percentile speed on the uncontrolled approaches to the location.
F. A condition diagram showing details of the physical layout, including such features as intersection geometrics, channelization, grades, sight-distance restrictions, transit stops and routes, parking conditions,

pavement markings, roadway lighting, driveways, nearby railroad crossings, distance to nearest traffic control signals, utility poles and fixtures, and adjacent land use.

G. A collision diagram showing crash experience by type, location, direction of movement, severity, weather, time of day, date, and day of week for at least 1 year.

18 The following data, which are desirable for a more precise understanding of the operation of the intersection, may be obtained during the periods described in Item B of Paragraph 17:

A. Vehicle-hours of stopped time delay determined separately for each approach.

B. The number and distribution of acceptable gaps in vehicular traffic on the major street for entrance from the minor street.

C. The posted or statutory speed limit or the 85th-percentile speed on controlled approaches at a point near to the intersection but unaffected by the control.

D. Pedestrian delay time for at least two 30-minute peak pedestrian delay periods of an average weekday or like periods of a Saturday or Sunday.

E. Queue length on stop-controlled approaches.

Standard:

19 **Delay, congestion, approach conditions, driver confusion, future land use or other evidence of the need for right of way assignment beyond that which could be provided by stop sign shall be demonstrated.**

Support:

20 Figure 4C–101(CA) and 4C-103(CA) are examples of warrant sheets.

Guidance:

21 *Figure 4C-103(CA) should be used only for new intersections or other locations where it is not reasonable to count actual traffic volumes.*

Section 4C.02 Warrant 1, Eight-Hour Vehicular Volume

Support:

01 The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal.

02 The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street.

03 It is intended that Warrant 1 be treated as a single warrant. If Condition A is satisfied, then Warrant 1 is satisfied and analyses of Condition B and the combination of Conditions A and B are not needed. Similarly, if Condition B is satisfied, then Warrant 1 is satisfied and an analysis of the combination of Conditions A and B is not needed.

Standard:

04 **The need for a traffic control signal shall be considered if an engineering study finds that one of the following conditions exist for each of any 8 hours of an average day:**

A. The vehicles per hour given in both of the 100 percent columns of Condition A in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection; or

B. The vehicles per hour given in both of the 100 percent columns of Condition B in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection.

In applying each condition the major-street and minor-street volumes shall be for the same 8 hours. On the minor street, the higher volume shall not be required to be on the same approach during each of these 8 hours.

Option:

05 If the posted or statutory speed limit or the 85th-percentile speed on the major street exceeds 40 mph, or if the intersection lies within the built-up area of an isolated community having a population of less than 10,000, the traffic volumes in the 70 percent columns in Table 4C-1 may be used in place of the 100 percent columns.

Guidance:

06 *The combination of Conditions A and B is intended for application at locations where Condition A is not satisfied and Condition B is not satisfied and should be applied only after an adequate trial of other alternatives that could cause less delay and inconvenience to traffic has failed to solve the traffic problems.*

Standard:

07 **The need for a traffic control signal shall be considered if an engineering study finds that both of the following conditions exist for each of any 8 hours of an average day:**

A. The vehicles per hour given in both of the 80 percent columns of Condition A in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection; and

B. The vehicles per hour given in both of the 80 percent columns of Condition B in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection.

These major-street and minor-street volumes shall be for the same 8 hours for each condition; however, the 8 hours satisfied in Condition A shall not be required to be the same 8 hours satisfied in Condition B. On the minor street, the higher volume shall not be required to be on the same approach during each of the 8 hours.

Option:

08 If the posted or statutory speed limit or the 85th-percentile speed on the major street exceeds 40 mph, or if the intersection lies within the built-up area of an isolated community having a population of less than 10,000, the traffic volumes in the 56 percent columns in Table 4C-1 may be used in place of the 80 percent columns.

Section 4C.03 Warrant 2, Four-Hour Vehicular Volume

Support:

01 The Four-Hour Vehicular Volume signal warrant conditions are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal.

Standard:

02 **The need for a traffic control signal shall be considered if an engineering study finds that, for each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) all fall above the applicable curve in Figure 4C-1 for the existing combination of approach lanes. On the minor street, the higher volume shall not be required to be on the same approach during each of these 4 hours.**

Option:

03 If the posted or statutory speed limit or the 85th-percentile speed on the major street exceeds 40 mph, or if the intersection lies within the built-up area of an isolated community having a population of less than 10,000, Figure 4C-2 may be used in place of Figure 4C-1.

Section 4C.04 Warrant 3, Peak Hour

Support:

01 The Peak Hour signal warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street.

Standard:

02 **This signal warrant shall be applied only in unusual cases, such as office complexes, manufacturing plants, industrial complexes, or high-occupancy vehicle facilities that attract or discharge large numbers of vehicles over a short time.**

03 **The need for a traffic control signal shall be considered if an engineering study finds that the criteria in either of the following two categories are met:**

A. If all three of the following conditions exist for the same 1 hour (any four consecutive 15-minute periods) of an average day:

1. The total stopped time delay experienced by the traffic on one minor-street approach (one direction only) controlled by a STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach or 5 vehicle-hours for a two-lane approach; and

2. The volume on the same minor-street approach (one direction only) equals or exceeds 100 vehicles per hour for one moving lane of traffic or 150 vehicles per hour for two moving lanes; and

3. The total entering volume serviced during the hour equals or exceeds 650 vehicles per hour for intersections with three approaches or 800 vehicles per hour for intersections with four or more approaches.

B. The plotted point representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) for 1 hour (any four consecutive 15-minute periods) of an average day falls above the applicable curve in Figure 4C-3 for the existing combination of approach lanes.

Option:

04 If the posted or statutory speed limit or the 85th-percentile speed on the major street exceeds 40 mph, or if the intersection lies within the built-up area of an isolated community having a population of less than 10,000, Figure 4C-4 may be used in place of Figure 4C-3 to evaluate the criteria in the second category of the Standard.

05 If this warrant is the only warrant met and a traffic control signal is justified by an engineering study, the traffic control signal may be operated in the flashing mode during the hours that the volume criteria of this warrant are not met.

Guidance:

06 *If this warrant is the only warrant met and a traffic control signal is justified by an engineering study, the traffic control signal should be traffic-actuated.*

Section 4C.05 Warrant 4, Pedestrian Volume

Support:

01 The Pedestrian Volume signal warrant is intended for application where the traffic volume on a major street is so heavy that pedestrians experience excessive delay in crossing the major street.

Standard:

02 **The need for a traffic control signal at an intersection or midblock crossing shall be considered if an engineering study finds that one of the following criteria is met:**

A. For each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) all fall above the curve in Figure 4C-5; or

B. For 1 hour (any four consecutive 15-minute periods) of an average day, the plotted point representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) falls above the curve in Figure 4C-7.

Option:

03 If the posted or statutory speed limit or the 85th-percentile speed on the major street exceeds 35 mph, or if the intersection lies within the built-up area of an isolated community having a population of less than 10,000, Figure 4C-6 may be used in place of Figure 4C-5 to evaluate Criterion A in Paragraph 2, and Figure 4C-8 may be used in place of Figure 4C-7 to evaluate Criterion B in Paragraph 2.

Standard:

04 **The Pedestrian Volume signal warrant shall not be applied at locations where the distance to the nearest traffic control signal or STOP sign controlling the street that pedestrians desire to cross is less than 300 feet, unless the proposed traffic control signal will not restrict the progressive movement of traffic.**

05 **If this warrant is met and a traffic control signal is justified by an engineering study, the traffic control signal shall be equipped with pedestrian signal heads complying with the provisions set forth in Chapter 4E.**

Guidance:

06 *If this warrant is met and a traffic control signal is justified by an engineering study, then:*

A. If it is installed at an intersection or major driveway location, the traffic control signal should also control the minor-street or driveway traffic, should be traffic-actuated, and should include pedestrian detection.

B. If it is installed at a non-intersection crossing, the traffic control signal should be installed at least 100 feet from side streets or driveways that are controlled by STOP or YIELD signs, and should be pedestrian-actuated. If the traffic control signal is installed at a non-intersection crossing, at least one of the signal faces should be over the traveled way for each approach, parking and other sight obstructions should be prohibited for at least 100 feet in advance of and at least 20 feet beyond the crosswalk or site

accommodations should be made through curb extensions or other techniques to provide adequate sight distance, and the installation should include suitable standard signs and pavement markings.

C. Furthermore, if it is installed within a signal system, the traffic control signal should be coordinated.

Option:

07 The criterion for the pedestrian volume crossing the major street may be reduced as much as 50 percent if the 15th-percentile crossing speed of pedestrians is less than 3.5 feet per second.

08 A traffic control signal may not be needed at the study location if adjacent coordinated traffic control signals consistently provide gaps of adequate length for pedestrians to cross the street.

Section 4C.06 Warrant 5, School Crossing

Support:

01 The School Crossing signal warrant is intended for application where the fact that schoolchildren cross the major street is the principal reason to consider installing a traffic control signal. For the purposes of this warrant, the word "schoolchildren" includes elementary through high school students.

Standard:

02 **The need for a traffic control signal shall be considered when an engineering study of the frequency and adequacy of gaps in the vehicular traffic stream as related to the number and size of groups of schoolchildren at an established school crossing across the major street shows that the number of adequate gaps in the traffic stream during the period when the schoolchildren are using the crossing is less than the number of minutes in the same period (see Section 7A.03) and there are a minimum of 20 schoolchildren during the highest crossing hour.**

03 **Before a decision is made to install a traffic control signal, consideration shall be given to the implementation of other remedial measures, such as warning signs and flashers, school speed zones, school crossing guards, or a grade-separated crossing.**

04 **The School Crossing signal warrant shall not be applied at locations where the distance to the nearest traffic control signal along the major street is less than 300 feet, unless the proposed traffic control signal will not restrict the progressive movement of traffic.**

Guidance:

05 *If this warrant is met and a traffic control signal is justified by an engineering study, then:*

A. If it is installed at an intersection or major driveway location, the traffic control signal should also control the minor-street or driveway traffic, should be traffic-actuated, and should include pedestrian detection.

B. If it is installed at a non-intersection crossing, the traffic control signal should be installed at least 100 feet from side streets or driveways that are controlled by STOP or YIELD signs, and should be pedestrian-actuated. If the traffic control signal is installed at a non-intersection crossing, at least one of the signal faces should be over the traveled way for each approach, parking and other sight obstructions should be prohibited for at least 100 feet in advance of and at least 20 feet beyond the crosswalk or site accommodations should be made through curb extensions or other techniques to provide adequate sight distance, and the installation should include suitable standard signs and pavement markings.

C. Furthermore, if it is installed within a signal system, the traffic control signal should be coordinated.

Section 4C.07 Warrant 6, Coordinated Signal System

Support:

01 Progressive movement in a coordinated signal system sometimes necessitates installing traffic control signals at intersections where they would not otherwise be needed in order to maintain proper platooning of vehicles.

Standard:

02 **The need for a traffic control signal shall be considered if an engineering study finds that one of the following criteria is met:**

A. On a one-way street or a street that has traffic predominantly in one direction, the adjacent traffic control signals are so far apart that they do not provide the necessary degree of vehicular platooning.

B. On a two-way street, adjacent traffic control signals do not provide the necessary degree of platooning and the proposed and adjacent traffic control signals will collectively provide a progressive operation.

Guidance:

03 *The Coordinated Signal System signal warrant should not be applied where the resultant spacing of traffic control signals would be less than 1,000 feet.*

Section 4C.08 Warrant 7, Crash Experience

Support:

01 The Crash Experience signal warrant conditions are intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal.

Standard:

02 **The need for a traffic control signal shall be considered if an engineering study finds that all of the following criteria are met:**

A. Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce the crash frequency; and

B. Five or more reported crashes, of types susceptible to correction by a traffic control signal, have occurred within a 12-month period, each crash involving personal injury or property damage apparently exceeding the applicable requirements for a reportable crash; and

C. For each of any 8 hours of an average day, the vehicles per hour (vph) given in both of the 80 percent columns of Condition A in Table 4C-1 (see Section 4C.02), or the vph in both of the 80 percent columns of Condition B in Table 4C-1 exists on the major-street and the higher-volume minor-street approach, respectively, to the intersection, or the volume of pedestrian traffic is not less than 80 percent of the requirements specified in the Pedestrian Volume warrant. These major-street and minor-street volumes shall be for the same 8 hours. On the minor street, the higher volume shall not be required to be on the same approach during each of the 8 hours.

Option:

03 If the posted or statutory speed limit or the 85th-percentile speed on the major street exceeds 40 mph, or if the intersection lies within the built-up area of an isolated community having a population of less than 10,000, the traffic volumes in the 56 percent columns in Table 4C-1 may be used in place of the 80 percent columns.

Section 4C.09 Warrant 8, Roadway Network

Support:

01 Installing a traffic control signal at some intersections might be justified to encourage concentration and organization of traffic flow on a roadway network.

Standard:

02 **The need for a traffic control signal shall be considered if an engineering study finds that the common intersection of two or more major routes meets one or both of the following criteria:**

A. The intersection has a total existing, or immediately projected, entering volume of at least 1,000 vehicles per hour during the peak hour of a typical weekday and has 5-year projected traffic volumes, based on an engineering study, that meet one or more of Warrants 1, 2, and 3 during an average weekday; or

B. The intersection has a total existing or immediately projected entering volume of at least 1,000 vehicles per hour for each of any 5 hours of a non-normal business day (Saturday or Sunday).

03 **A major route as used in this signal warrant shall have at least one of the following characteristics:**

A. It is part of the street or highway system that serves as the principal roadway network for through traffic flow.

B. It includes rural or suburban highways outside, entering, or traversing a city.

C. It appears as a major route on an official plan, such as a major street plan in an urban area traffic and transportation study.

Section 4C.10 Warrant 9, Intersection Near a Grade Crossing

Support:

01 The Intersection Near a Grade Crossing signal warrant is intended for use at a location where none of the conditions described in the other eight traffic signal warrants are met, but the proximity to the intersection of a

grade crossing on an intersection approach controlled by a STOP or YIELD sign is the principal reason to consider installing a traffic control signal.

Guidance:

02 *This signal warrant should be applied only after adequate consideration has been given to other alternatives or after a trial of an alternative has failed to alleviate the safety concerns associated with the grade crossing. Among the alternatives that should be considered or tried are:*

A. Providing additional pavement that would enable vehicles to clear the track or that would provide space for an evasive maneuver, or

B. Reassigning the stop controls at the intersection to make the approach across the track a non-stopping approach.

Standard:

03 **The need for a traffic control signal shall be considered if an engineering study finds that both of the following criteria are met:**

A. A grade crossing exists on an approach controlled by a STOP or YIELD sign and the center of the track nearest to the intersection is within 140 feet of the stop line or yield line on the approach; and

B. During the highest traffic volume hour during which rail traffic uses the crossing, the plotted point representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the minor-street approach that crosses the track (one direction only, approaching the intersection) falls above the applicable curve in Figure 4C-9 or 4C-10 for the existing combination of approach lanes over the track and the distance D, which is the clear storage distance as defined in Section 1A.13.

Guidance:

04 *The following considerations apply when plotting the traffic volume data on Figure 4C-9 or 4C-10:*

A. Figure 4C-9 should be used if there is only one lane approaching the intersection at the track crossing location and Figure 4C-10 should be used if there are two or more lanes approaching the intersection at the track crossing location.

B. After determining the actual distance D, the curve for the distance D that is nearest to the actual distance D should be used. For example, if the actual distance D is 95 feet, the plotted point should be compared to the curve for D = 90 feet.

C. If the rail traffic arrival times are unknown, the highest traffic volume hour of the day should be used.

Option:

05 The minor-street approach volume may be multiplied by up to three adjustment factors as provided in Paragraphs 6 through 8.

06 Because the curves are based on an average of four occurrences of rail traffic per day, the vehicles per hour on the minor-street approach may be multiplied by the adjustment factor shown in Table 4C-2 for the appropriate number of occurrences of rail traffic per day.

07 Because the curves are based on typical vehicle occupancy, if at least 2% of the vehicles crossing the track are buses carrying at least 20 people, the vehicles per hour on the minor-street approach may be multiplied by the adjustment factor shown in Table 4C-3 for the appropriate percentage of high-occupancy buses.

08 Because the curves are based on tractor-trailer trucks comprising 10% of the vehicles crossing the track, the vehicles per hour on the minor-street approach may be multiplied by the adjustment factor shown in Table 4C-4 for the appropriate distance and percentage of tractor-trailer trucks.

Standard:

09 **If this warrant is met and a traffic control signal at the intersection is justified by an engineering study, then:**

A. The traffic control signal shall have actuation on the minor street;

B. Preemption control shall be provided in accordance with Sections 4D.27, 8C.09, and 8C.10; and

C. The grade crossing shall have flashing-light signals (see Chapter 8C).

Guidance:

10 *If this warrant is met and a traffic control signal at the intersection is justified by an engineering study, the grade crossing should have automatic gates (see Chapter 8C).*

Section 4C.101(CA) Criterion for School Crossing Traffic Signals

01 **Standard:**

A. The signal shall be designed for full-time operation.

B. Pedestrian signal faces of the International Symbol type shall be installed at all marked crosswalks at signalized intersections along the "Suggested Route to School."

C. If an intersection is signalized under this guideline for school pedestrians, the entire intersection shall be signalized.

D. School area traffic signals shall be traffic actuated type with push buttons or other detectors for pedestrians.

Option:

02 Non-intersection school pedestrian crosswalk locations may be signalized when justified.

Figure 4C-1. Warrant 2, Four-Hour Vehicular Volume

Attachment C Sewer Area Study

1. INTRODUCTION

The purpose of this memorandum is to assess the potential impacts to sanitary sewer infrastructure resulting from the proposed 10950 Washington Boulevard Project (the Project). This assessment includes:

- A calculation of anticipated wastewater generation upon Project implementation, using current Sewage Generation Factors,
- A description of existing public sewer mains that serve the Project, existing flow conditions within these mains, any future proposed improvements to these mains, and
- A determination of whether the sewer mains serving the Project and downstream wastewater treatment infrastructure would have adequate capacity to accommodate the proposed development.

Hudson Pacific, the Applicant, proposes to develop a mixed-use development (Project) on an approximately 5.8-acre (250,932 square feet [sf]) site (Project Site) located at 10950 Washington Boulevard within the Clarkdale neighborhood of the City of Culver City (City). The Project Site is currently developed with two currently vacant commercial/office buildings totaling approximately 160,438 sf of commercial floor area and two connected surface parking lots. One parking lot is adjacent to the eastern Building 1 (the "North Lot"), and the other is located directly south of the western Building 2 (the "South Lot"). The Project Site is bound by Washington Boulevard to the north and northwest, commercial uses to the east, residential uses to the south, and a Mosque and residential uses to the west.

The Project Site has a General Plan land use designation of Mixed-Use Medium, which permits 65 dwelling units per acre. The Applicant proposes a Density and Other Bonus Incentives density increase in return for reservation of 79 units as affordable for low-income households for a period of 55 years. The Project's total unit count of 508 units (including the 79 low income units) is thus consistent with the applicable Mixed Use Medium density of 65 dwelling units per acre and state density bonus law.

The Project would demolish all existing buildings and parking facilities on the Project Site and construct a new 5-story (up to a height of 61-feet) mixed-use development over one level of subterranean parking. The Project would include two, 5-story buildings (Building A and Building B) up to 61 feet in height that would include a total of 508 multi-family dwelling units (including 79 Low Income units) and 14,087 sf commercial use. The Project's 508 residential units would consist of 90 studio units, 241 one-bedroom units, and 177 two-bedroom units. The Project would include a total of 715 vehicular parking spaces (685 residential and 30 commercial), with 606 spaces provided within one subterranean level and 109 spaces provided on the enclosed first level of the building. Two points of vehicular access would be provided to the Project Site via a north driveway and south driveway, both along Washington Boulevard.

The Project's 14,087 sf of commercial space would be located along the Washington Boulevard frontage of Building A. The Project would include a total of 114,169 sf of open space. Of this total, 20,450 sf would be provided as private open space within balconies or private patios distributed throughout the Project Site. The remaining 93,719 sf would be common open space.

DRAFT

2. WASTEWATER GENERATION

Wastewater generation estimates for the existing and proposed Project Site have been prepared based on Los Angeles County Sanitation Districts (LACSD) Sewage Generation Factors and a peaking factor of 2.6. Results are summarized in Table 1 below. The LACSD Sewage Generation Factors Table is included for reference in Attachment A.

Table 1 – Proposed Wastewater Generation by the Project

Land Use	Units	Generation Rate (gpd/unit) (1)	Peaking Factor(2)	Total Sewage Generation (gpd)	Sewage Flow Rate (cfs)
Residential – Five Units or More	508 units	156 gpd/unit	2.6	206,045	0.319
Commercial – Store	14,087 sf	0.1 gpd/sf	2.6	3,663	0.006
Total Proposed Wastewater Generation by the Project				**209,708**	**0.32**

(1) Generation Rates per LACSD Sewage Generation Factors. See Attachment A for LACSD Sewage Generation Factors.

(2) A standard peaking factor of 2.6 is multiplied to all proposed uses to estimate peak sewer flows.

3. WASTEWATER INFRASTRUCTURE CAPACITY

The wastewater generated by the Project is ultimately treated by the Hyperion Water Reclamation Plant (HWRP). The existing design capacity of the HWRP is approximately 450 million gallons per day[1] (mgd) and the existing average daily flow for the system is approximately 260 mgd.[2]

Sanitary sewer service to the Project is to be provided by Culver City Public Works, which operates and maintains the collection and conveyance of sewer facilities within Culver City. Based on the sewer map and as-built drawings provided by Culver City Public Works, there are four City-owned 8-inch vitrified clay sewer pipes in the vicinity of the Project that convey sewer flows southeast and southwest, three of which are located in easements within the Project limits. At the northeast edge of the site, a main runs along the property line and conveys flow southeast. At the southeast corner of the site, where the site limit protrudes to a point, two mains run along the northern and southern limits of this area to the southeast. In Washington Boulevard, a sewer main runs along the western side of the street and conveys flows southwest. See Attachment B for existing utility exhibit.

The Project proposes to connect to the three sewer mains that are located within easements on site. The Project proposes a total of six sewer connections: three sewer connections to the main at the

[1] City of Los Angeles, LA Sanitation & Environment, Water Reclamation Plants, https://www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-cw/s-lsh-wwd-cw-p?_adf.ctrl-state=oep8lwkld_4&_afrLoop=28344654751341747#!, accessed September 22, 2023.

[2] City of Los Angeles, LA Sanitation & Environment, Sewer System Management Plan, January 2019.

DRAFT

northeast edge of the site, one sewer connection to the main at the northeast edge of the southeast protrusion of the site, and two sewer connections to the main at the southwest edge of the site.

Based on the Los Angeles County memo "Policies for Managing Available Sewer Capacity and Sewage Discharge in Excess of Design Capacity" dated October 12, 2005, the design capacity for sewer mainlines less than 15 inches in diameter is defined as half full. A sewer area study was performed to determine whether the cumulative flows resulting from the project and nearby existing developments would exceed the 50 percent full flow capacity of these sewer mains (half full).

The sewer area study is broken into two sewersheds: Sewershed A and Sewershed B. In the existing condition, Sewershed A is delineated to include existing developments bounded by Washington Boulevard, Elenda Street, Aletta Avenue, and Charles Avenue. Sewershed B is delineated to include the existing developments bounded by Charles Avenue, Aletta Avenue, Huron Avenue, and Washington Boulevard. In the existing condition, the Project Site is vacant and assumed to generate no existing sewer flow.

In the proposed condition, Sewershed A includes three of six proposed sewer connections by the Project, which is assumed to account for 50 percent of the proposed wastewater flow from the Project, and all existing developments bounded by the Project Site, Washington Boulevard, Elenda Street, Aletta Avenue, and Charles Avenue. Sewershed B includes three of six proposed sewer connections by the Project, which is assumed to account for 50 percent of the proposed wastewater flow from the Project, and all existing developments bounded by the Project Site, Charles Avenue, Aletta Avenue, Huron Avenue, and Washington Boulevard.

Existing uses were determined using the Los Angeles County Property Assessment Information System. Wastewater generation estimates for the existing properties in Sewershed A and Sewershed B were prepared based on LACSD Sewage Generation Factors and a peaking factor of 2.6. Results are summarized in Table 2 below. See Attachment C for sewer area study to be reviewed by the City.

Table 2 – Proposed Cumulative Downstream Flow vs. 50 Percent Full Flow Capacity

Sewershed	Proposed Cumulative Downstream Flow (cfs)	50% Full Flow Capacity (cfs)
Sewershed A	0.225	0.47
Sewershed B	0.222	0.31

Based on this analysis, the Project would not cause the wastewater flow in the nearby mains to exceed 50 percent of the pipes' full flow capacity. Currently, the City of Culver City reports no known issues or proposed future improvements to these sewer mains.

4. CONCLUSION – WASTEWATER IMPACTS

Based on the type of use and generation factors, the Project is expected to generate a wastewater flow of approximately 209,708 gallons per day (gpd). The existing design capacity of the HWRP is approximately 450 million gallons per day (mgd) and the existing average daily flow for the system is approximately 260 mgd. The Project's proposed new wastewater generation is approximately 0.21 mgd, which is substantially less than one percent of the HWRP's treatment capacity. Consequently, impacts on wastewater treatment capacity are less than significant.

DRAFT

Based on the sewer area study included in Attachment C, the estimated flow produced by the Project and the surrounding land uses is less than 50 percent of the sewer full flow capacity in downstream sewer mains. Consequently, impacts on local sewer main capacity are less than significant.

MEMO

DATE: March 7, 2025

TO: City of Culver City

FROM: KPFF Consulting Engineers

RE: **10950 Washington – Sewer Area Study**

1. INTRODUCTION

The purpose of this memorandum is to analyze the capacity of the existing sewer infrastructure maintained by the City of Culver City that will be used to convey sewer flows generated by the proposed project at 10950 Washington Boulevard. We understand this memorandum is associated with the Technical Memorandum titled “10950 Washington – Wastewater Infrastructure and Generation Analysis”.

2. PROJECT DESCRIPTION

Hudson Pacific, the Applicant, proposes to develop a mixed-use development (Project) on an approximately 5.8-acre (250,932 square feet [sf]) site (Project Site) located at 10950 Washington Boulevard within the Clarkdale neighborhood of the City of Culver City (City). The Project Site is currently developed with two vacant commercial/office buildings totaling approximately 160,438 sf of commercial floor area and two connected surface parking lots. One parking lot is adjacent to the eastern Building 1 (the "North Lot"), and the other is located directly south of the western Building 2 (the "South Lot"). The Project Site is bound by Washington Boulevard to the north and northwest, commercial uses to the east, residential uses to the south, and a Mosque and residential uses to the west.

The Project Site has a General Plan land use designation of Mixed-Use Medium, which permits 65 dwelling units per acre. The Applicant proposes a Density and Other Bonus Incentives density increase in return for reservation of 79 units as affordable for low-income households for a period of 55 years. The Project's total unit count of 508 units (including the 79 low income units) is thus consistent with the applicable Mixed Use Medium density of 65 dwelling units per acre and state density bonus law.

The Project would demolish all existing buildings and parking facilities on the Project Site and construct a new 5-story (up to a height of 61-feet) mixed-use development over one level of subterranean parking. The Project would include two, 5-story buildings (Building A and Building B) up to 61 feet in height that would include a total of 508 multi-family dwelling units (including 79 Low Income units) and 14,087 sf commercial use. The Project’s 508 residential units would consist of 90 studio units, 241 one-bedroom units, and 177 two-bedroom units. The Project would include a total of 715 vehicular parking spaces (685 residential and 30 commercial), with 606 spaces provided within one subterranean level and 109 spaces provided on the enclosed first level of the building. Two points of vehicular access would be provided to the Project Site via a north driveway and south driveway, both along Washington Boulevard.

The Project's 14,087 sf of commercial space would be located along the Washington Boulevard frontage of Building A. The Project would include a total of 114,169 sf of open space. Of this total, 20,450 sf would be provided as private open space within balconies or private patios distributed throughout the Project Site. The remaining 93,719 sf would be common open space.

3. SCOPE OF ANALYSIS

Sanitary sewer service to the Project is to be provided by Culver City Public Works, which operates and maintains the collection and conveyance of sewer facilities within the City. Based on the sewer map and as-built drawings provided by Culver City Public Works, there are four City-owned 8-inch vitrified clay sewer pipes in the vicinity of the Project that convey sewer flows southeast and southwest, three of which are located in easements within the Project limits. At the northeast edge of the site, a sewer main runs along the property line and conveys flow southeast. At the southeast corner of the site, where the site limit protrudes to a point, two sewer mains run along the northern and southern limits of this area to the southeast. In Washington Boulevard, a sewer main runs along the western side of the street and conveys flows southwest.

The Project proposes to connect to the three sewer mains that are located within easements on site. The Project proposes a total of six sewer connections: three sewer connections to the main at the northeast edge of the site, one sewer connection to the main at the northeast edge of the southeast protrusion of the site, and two sewer connections to the main at the southwest edge of the site.

The sewer area study is broken into two sewersheds: Sewershed A and Sewershed B. In the existing condition, Sewershed A is delineated to include existing developments bounded by Washington Boulevard, Elenda Street, Aletta Avenue, and Charles Avenue. Sewershed B is delineated to include the existing developments bounded by Charles Avenue, Aletta Avenue, Huron Avenue, and Washington Boulevard. In the existing condition, the Project Site is vacant and assumed to generate no existing sewer flow.

In the proposed condition, Sewershed A includes three of six proposed sewer connections by the Project, which is assumed to account for 50 percent of the proposed wastewater flow from the Project, and all existing developments bounded by the Project Site, Washington Boulevard, Elenda Street, Aletta Avenue, and Charles Avenue. Sewershed B includes three of six proposed sewer connections by the Project, which is assumed to account for 50 percent of the proposed wastewater flow from the Project, and all existing developments bounded by the Project Site, Charles Avenue, Aletta Avenue, Huron Avenue, and Washington Boulevard. See Attachment A for an exhibit of the Project Site and sewershed delineation.

3. METHODOLOGY

The purpose of the following analysis is to determine whether the cumulative flows resulting from the Project and nearby existing developments would exceed the capacity of the nearby sewer infrastructure. Based on the Los Angeles County memo "Policies for Managing Available Sewer Capacity and Sewage Discharge in Excess of Design Capacity" dated October 12, 2005, the design capacity for sewer mainlines less than 15 inches in diameter is defined as half full. Therefore, the existing sewer infrastructure is determined to be sufficient to accept the proposed flow from the Project if the resulting cumulative flows are less than 50 percent of the full flow capacity of the nearby sewer mains.

Proposed wastewater generation was calculated for the Project Site based on the Los Angeles County Sanitation Districts (LACSD) Sewage Generation Factors categories and multiplied by a standard peaking factor of 2.6. See Attachment B for LACSD Sewage Generation Factors Table.

Existing uses in Sewershed A and Sewershed B were determined using the Los Angeles County Property Assessment Information System. Wastewater generation by these existing uses were calculated based on the LACSD Sewage Generation Factors categories and multiplied by a standard peaking factor of 2.6.

It is assumed that half of the proposed flows generated by the Project will enter Sewershed A, and half of the proposed flows will enter Sewershed B.

The most downstream end of the main corresponding to each sewershed was studied in this analysis. Based on record drawings, the most downstream end of the main corresponding to each sewershed is also the portion of the main with the shallowest slope. Thus, this segment of the main is the segment where the highest percent full is expected to occur.

Pipe capacity was calculated with FlowMaster using Manning's equation (included below) to solve for the hydraulic radius, then the depth of flow.

$$Q = \frac{1.49}{n} R^{2/3} S^{1/2} A$$

Where:

Q = flow rate

n = surface roughness

R = hydraulic radius = area/wetted perimeter

S = slope

A = area

3. WASTEWATER GENERATION

See Table 1 below for proposed wastewater generation by the Project.

Table 1 – Proposed Wastewater Generation by the Project

Land Use	Units	Generation Rate (gpd/unit) (1)	Peaking Factor(2)	Total Sewage Generation (gpd)	Sewage Flow Rate (cfs)
Residential – Five Units or More	508 units	156 gpd/unit	2.6	206,045	0.319
Commercial – Store	14,087 sf	0.1 gpd/sf	2.6	3,663	0.006
Total Proposed Wastewater Generation by the Project				**209,708**	**0.32**

(1) Generation Rates per LACSD Sewage Generation Factors. See Attachment B for LACSD Sewage Generation Factors.

(2) A standard peaking factor of 2.6 is multiplied to all proposed uses to estimate peak sewer flows.

See Table 2 below for the total existing wastewater generation in Sewershed A and in Sewershed B. See Attachment C for full tabulation of existing uses.

Table 2 – Existing Wastewater Generation in Sewershed A and Sewershed B

Existing Development(s)	Units	Generation Rate (gpd/unit)(1)	Peaking Factor(2)	Total Sewage Generation (gpd)	Sewage Flow Rate (cfs)
Sewershed A(3)	—	—	2.6	40,335	0.062
Sewershed B(3)	—	—	2.6	38,426	0.059

(1) Generation Rates per LACSD Sewage Generation Factors. See Attachment B for LACSD Sewage Generation Factors.

(2) A standard peaking factor of 2.6 is multiplied to all existing uses to estimate peak sewer flows.

(3) Existing uses are summed for each sewershed in this table. See Attachment C for full tabulation of existing uses.

See Table 3 below for the total proposed wastewater generation in Sewershed A and Sewershed B as a result of the Project. See Attachment D for full tabulation of proposed uses.

Table 3 – Proposed Wastewater Generation in Sewershed A and Sewershed B

Existing and Proposed Development(s)	Units	Generation Rate (gpd/unit)(1)	Peaking Factor(2)	Total Sewage Generation (gpd)	Sewage Flow Rate (cfs)
Sewershed A(3)	—	—	2.6	145,189	0.225
Sewershed B(3)	—	—	2.6	143,280	0.222

(1) Generation Rates per LACSD Sewage Generation Factors. See Attachment B for LACSD Sewage Generation Factors.

(2) A standard peaking factor of 2.6 is multiplied to all existing and proposed uses to estimate peak sewer flows.

(3) Existing and proposed uses summed for each sewershed in this table. See Attachment D for full tabulation of existing and proposed uses.

4. WASTEWATER INFRASTRUCTURE CAPACITY

See Table 4 below for the pipe capacity of the mains in Sewershed A and Sewershed B in the existing condition and the proposed condition as a result of the Project. See Attachment E for capacity calculations.

Table 4 – Sewer Capacity Analysis at Downstream End of Sewershed A and Sewershed B					
Sewershed	**Diameter (in)**	**Channel Slope (%)**	**50% Full Flow Capacity (cfs)**	**Existing Percent Full (%)**	**Proposed Percent Full (%)**
Sewershed A	8	0.7	0.47	17.4[(2)]	33.3[(4)]
Sewershed B	8	0.309	0.31	21.0[(3)]	41.0[(5)]

(1) Generation Rates per LACSD Sewage Generation Factors. See Attachment B for LACSD Sewage Generation Factors.
(2) Existing discharge in Sewershed A = 0.062 cfs. See Attachment C for more details.
(3) Existing discharge in Sewershed B = 0.059 cfs. See Attachment C for more details.
(4) Proposed discharge in Sewershed A = 0.225 cfs. See Attachment D for more details.
(5) Proposed discharge in Sewershed B = 0.222 cfs. See Attachment D for more details.

Based on this analysis, the Project would not cause the wastewater flow in the existing sewer mains to exceed 50 percent of their full flow capacity.

5. CONCLUSION – WASTEWATER IMPACTS

Based on the type of use and generation factors, the Project is expected to generate 209,708 gallons per day (gpd), which is equivalent to 0.32 cubic feet per second (cfs). Based on Table 4, this additional flow is not anticipated to cause the sewer mains downstream of the Project within Sewershed A and Sewershed B to exceed 50 percent full. Therefore, the existing infrastructure is expected to be sufficient to accept sewer flow from the proposed development.

4148 Charles Avenue	Duplex	Parcel	1	312	2.6	811	0.0013
4154 Charles Avenue	Single Family Home	Parcel	1	260	2.6	676	0.0010
TOTAL SEWAGE FLOW RATE AT DOWNSTREAM END OF SEWERSHED A						**145,189**	**0.225**

[1] Building use is based on the Los Angeles County Property Assessment Information System and the Los Angeles County Sanitation Districts (LACSD) Loadings for Each Class of Land Use Table (LACSD Sewage Generation Factors Table).

[2] Unit flow for each building use is based on the LACSD Sewage Generation Factors Table.

[3] A standard peaking factor of 2.6 is multiplied to all existing and proposed uses to estimate peak sewer flows.

[4] This analysis assumes that 50 percent of the proposed wastewater generation by the Project enters Sewershed A. See Sewer Area Study, Table 2 for proposed wastewater generation by the Project.

Appendix B Project Demand UWMP Inclusion Analysis

1 INTRODUCTION

Included herein is a Senate Bill (SB) 610-compliant water supply assessment (WSA) in support of the 10950 Washington Boulevard Project ("Proposed Project"; **Figure 1**). The Proposed Project site is comprised of approximately 5.5 acres located in the City of Culver City, California. The Proposed Project includes the demolition of the existing commercial structures on the project site and the construction of a new, five-story residential building totaling 552,873 square feet (sq ft) that includes 508 new dwelling units and approximately 14,087 sq ft of commercial use on the ground floor (KFA Architecture, 2024; KPFF, 2024). Additionally, the Proposed Project would include 269,421 sq ft of covered parking (KFA Architecture, 2024). A detailed site plan for the Proposed Project is included in **Appendix A**. The Proposed Project is located within the Golden State Water Company (GSWC) Culver City service area, and GSWC will be the water service provider for the Proposed Project (**Figure 2**).

The information provided in this WSA is consistent with California Water Code (CWC) §10910-10912 requirements and the California Department of Water Resources' (DWR's) *Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001: To Assist Water Suppliers, Cities, and Counties in Integrating Water and Land Use Planning*, dated 8 October 2003. The text of specific sub-sections of the CWC is included within gray text boxes with italicized font at the beginning of specific sections of this WSA. The information presented in those respective sections, and the associated tables and figures, respond directly to CWC requirements.

The purpose of this WSA is to evaluate whether GSWC has sufficient water supply to meet the current and planned water demands within the GSWC Culver City service area, including the demands associated with the Proposed Project, during normal, single, and multiple dry hydrologic years over a 20-year time horizon.[1] More specifically, this WSA includes:

- A summary of the WSA requirements articulated in CWC §10910-10912 and a description of how they apply to the Proposed Project;
- A description and analysis of the current and projected future water demands of the Proposed Project through the year 2045;
- A description and analysis of the historical, current, and projected future water demands for the GSWC Culver City service area through the year 2045;
- A description and analysis of the current and projected future water supplies for the GSWC Culver City service area through the year 2045; and
- A comparison of the water supplies and demands for the GSWC Culver City service area, including the projected water demands associated with the Proposed Project.

[1] The CWC specifies that a WSA must look at supplies and demand on a 20-year horizon (i.e., to 2044), but given the available data, this WSA looks beyond that to 2045.

The information contained in this WSA is based primarily on the 2020 Urban Water Management Plan (UWMP) prepared for the GSWC Culver City service area, except where updated with relevant water demand and supply reliability and other information from sources including GSWC, the Santa Monica Basin Groundwater Sustainability Plan (GSP), and others, as noted.

This WSA concludes that sufficient water supply is available to GSWC to meet all future demands within the GSWC Culver City service area, including those associated with the Proposed Project.

2 GENERAL REQUIREMENTS FOR THE PREPARATION OF A WATER SUPPLY ASSESSMENT

The purpose of this section is to outline what types of projects require the preparation of a WSA, who is responsible for its preparation, and the necessary components of a WSA.

2.1 Applicability of SB Bill 610 to the Proposed Project

☑ ***CWC § 10910 (a)***

Any city or county that determines that a project, as defined in Section 10912, is subject to the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code) under Section 21080 of the Public Resources Code shall comply with this part.

☑ ***CWC § 10912***

For the purposes of this part, the following terms have the following meanings:

(a) "Project" means any of the following:

(1) A proposed residential development of more than 500 dwelling units.

(2) A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.

(3) A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.

(4) A proposed hotel or motel, or both, having more than 500 rooms.

(5) A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.

(6) A mixed-use project that includes one or more of the projects specified in this subdivision.

(7) A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

(b) If a public water system has fewer than 5,000 service connections, then "project" means any proposed residential, business, commercial, hotel or motel, or industrial development that would account for an increase of 10 percent or more in the number of the public water system's existing service connections, or a mixed-use project that would demand an amount of water equivalent to, or greater than, the amount of water required by residential development that would represent an increase of 10 percent or more in the number of the public water system's existing service connections.

The Proposed Project would include a residential development of more than 500 dwelling units and therefore satisfies the definition of a "project" requiring a WSA pursuant to SB 610 (CWC §10910(a) and 10912(a)(3)). It should be noted that per SB 221, over 500 dwelling units may also trigger the need for a Water Supply Verification.

2.2 Responsibility for Preparation of the Water Supply Assessment

☑ ***CWC § 10910 (b)***

The city or county, at the time that it determines whether an environmental impact report, a negative declaration, or a mitigated negative declaration is required for any project subject to the California Environmental Quality Act pursuant to Section 21080.1 of the Public Resources Code, shall identify any water system that is, or may become as a result of supplying water to the project identified pursuant to this subdivision, a public water system, as defined in Section 10912, that may supply water for the project. If the city or county is not able to identify any public water system that may supply water for the project, the city or county shall prepare the water assessment required by this part after consulting with any entity serving domestic water supplies whose service area includes the project site, the local agency formation commission, and any public water system adjacent to the project site.

The Proposed Project is located within the GSWC Culver City service area, and potable water for the Proposed Project will be supplied by GSWC. Therefore, in accordance with CWC §10910(b), GSWC is the entity responsible for adopting the WSA for the Proposed Project.

2.3 Components of a Water Supply Assessment

☑ ***CWC § 10910 (c) (4)***

If the city or county is required to comply with this part pursuant to subdivision (b), the water supply assessment for the project shall include a discussion with regard to whether the total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and planned future uses, including agricultural and manufacturing uses.

☑ ***CWC § 10911***

(b) The city or county shall include the water supply assessment provided pursuant to Section 10910, and any information provided pursuant to subdivision (a), in any environmental document prepared for the project pursuant to Division 13 (commencing with Section 21000) of the Public Resources Code.

(c) The city or county may include in any environmental document an evaluation of any information included in that environmental document provided pursuant to subdivision (b). The city or county shall determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the project, in addition to existing and planned future uses. If the city or county determines that water supplies will not be sufficient, the city or county shall include that determination in its findings for the project.

As listed above in CWC §10910(c)(4), the primary purpose of a WSA is to evaluate whether sufficient water supply is available to meet all future demands within the water supplier's service area, including those associated with the Proposed Project, during normal and dry hydrologic years for a 20-year time horizon.[2] Therefore, the following information is included in this WSA:

[2] The CWC specifies that a WSA must look at supplies and demand on a 20-year horizon (i.e., to 2044), but given the available data, this WSA looks beyond that to 2045.

- A description and analysis of the current and projected future water demands of the Proposed Project through the year 2045;
- A description and analysis of the historical, current, and projected future water demands for the GSWC Culver City service area through the year 2045;
- A description and analysis of the current and projected future water supplies for the GSWC Culver City service area through the year 2045; and
- A comparison of the water supplies and demands for the GSWC Culver City service area, including the projected water demands associated with the Proposed Project.

3 PROJECT DESCRIPTION

The Proposed Project site is comprised of approximately 5.5 acres located in the City of Culver City, California, inclusive of Assessor Parcel Numbers (APNs) 4208-024-001, 4208-024-002, and 4208-025-018 (Hudson Pacific Properties, 2023a; KPFF, 2024). The Proposed Project site is bordered by Washington Boulevard to the north, Elenda Street to the east, mixed commercial and residential buildings to the west, and Charles Avenue and residential buildings to the south.

The Proposed Project will involve the demolition of existing commercial buildings on the project site and the construction of a new, five-story residential building, which includes approximately:

- 241 one-bedroom apartments, 177 two-bedroom apartments, and 90 studio apartments, for a total of 508 new dwelling units;
- 14,087 sq ft of food service use on the ground floor;
- 1,305 sq ft of residential community pools and spas;
- 39,980 sq ft of irrigated landscape area; and
- 269,421 sq ft of covered parking (Hudson Pacific Properties, 2023a; KPFF, 2023a; KFA Architecture, 2024).

The anticipated completion and full buildout of the Proposed Project is expected by 2030 (Hudson Pacific Properties, 2023d).

4 PROJECT WATER DEMAND

The City of Culver City has adopted green building standards and water efficient landscaping ordinances consistent with previous versions of the CalGreen building standards and the California Model Water Efficient Landscape Ordinance (MWELO). Landscaping will also be compliant with Assembly Bill (AB) 1572. As part of state requirements, all new developments must comply with these efficiency standards. As such, the Proposed Project development is expected to include a number of water-efficient features, including, but not limited to:

- Use of low-flow lavatory faucets, kitchen faucets, toilets, and urinals in accordance with CalGreen Code; and
- Inclusion of low-water use landscaping and high-efficiency irrigation systems to minimize outdoor water use in accordance with MWELO.

As described below, the average annual water demand for the Proposed Project was estimated based on: (1) literature values for commercial water use (City of Los Angeles Bureau of Engineering, 2012; Los Angeles County Sanitation Districts, 2024) and (2) information about the Proposed Project provided by the Hudson Pacific Properties (Hudson Pacific Properties, 2023d). **Table 1** includes a summary of the water demand projections associated with the proposed land uses at the Proposed Project completion. Full buildout of the Proposed Project is assumed to be completed by 2030 (Hudson Pacific Properties, 2023d).

4.1 Indoor Water Use

Table 1 provides a summary of the land uses, unit demand factors, and respective water demands associated with each land use anticipated in the Proposed Project. Below is a summary of the calculations and assumptions for each indoor land use category.

4.1.1 Residential Use

Based on current development plans, the Proposed Project is expected to include 508 units of residential use (Hudson Pacific Properties, 2023b). Of these 508 units, 177 are two-bedroom units, 241 are one-bedroom units, and 90 are studio units (KPFF, 2024). The water demand for the residential use is estimated using the Los Angeles County Sanitation Districts (LACSD) wastewater generation factor for residential land uses with five or more units (LACSD, 2024). For the purpose of this analysis, wastewater flows are assumed to be 90% of the total water demand for each land use consistent with the methodology used in the Paramount Pictures Master Plan, which was approved by the City of Los Angeles in April 2016 (City of Los Angeles Department of City Planning, 2016; Incledon, 2015). As such, the LACSD wastewater generation factor for residential land uses with five or more units was divided by 0.9 to determine a water demand factor of 173 gallons per day (gpd) per dwelling unit. Based on this residential demand factor, the total residential use for the Proposed Project at full buildout is estimated to be 99 acre-feet per year (AFY).

4.1.2 Food Service Use

The Proposed Project includes 14,087 sq ft of food service use, including a grab-and-go market and coffee shop (Hudson Pacific Properties, 2023d; KPFF, 2024). The water demand for the food service use is estimated using the LACSD wastewater generation factor for commercial store land uses (LACSD, 2024). Similar to the residential demand factor calculation, wastewater flows are assumed to be 90% of the total water demand for each land use. As such, the LACSD wastewater generation factor for commercial store land uses was divided by 0.9 to determine a water demand factor of 0.11 gpd per sq ft. The resultant water demand associated with the food service portion of the Proposed Project at full buildout is estimated to be 1.8 AFY.

4.1.3 Total Indoor Water Use

Based on the above calculations and assumptions, total indoor water use for the Proposed Project is estimated to be 100 AFY at full buildout.

4.2 Covered Parking Water Use

The Proposed Project includes ground floor parking, as well as one level of semi-subterranean parking, totaling approximately 269,421 sq ft of covered parking facilities (KFA Architecture, 2024). Water use associated with this space is anticipated to be minimal, limited to cleaning of the facility approximately twelve times per year (LADWP, 2022). It is assumed that 0.020 gallons per sq ft will be used per each cleaning event (City of Los Angeles Bureau of Engineering, 2012). Thus, it is estimated that 0.20 AFY will be used for purposes of cleaning the parking facility.

4.3 Community Landscaping and Water Feature Water Use

The Proposed Project includes general landscaping along with pools and spas as a part of the residential community (collectively referred to as "water features"). The projected water demands for the community landscaping and water features were estimated based on the Maximum Applied Water Allowance (MAWA) per the MWELO (DWR, 2015). The MWELO requires that the annual estimated total water use for landscape irrigation and water features does not exceed the MAWA (DWR, 2015). As shown below, the MAWA is calculated based on the regional reference evapotranspiration rate, an evaporation adjustment factor, the total landscaped area, and the area of "special landscaped area."[3] Water use for the Proposed Project landscaping irrigation has been conservatively assumed to be equal to the MAWA, which is the upper limit of annual applied water for established landscaped areas and water features.

[3] Special Landscaped Area includes landscaping dedicated solely to edible plants, recreational areas, areas irrigated with recycled water, or water features using recycled water. There is no Special Landscape Area associated with the Proposed Project (KPFF, 2023b).

The MAWA is calculated using the following equation:

$$MAWA = ETo \times [(ETAF \times LA) + (1\text{-}ETAF) \times SLA]$$

where:

ETo	=	The regional reference evapotranspiration rate
ETAF	=	Evapotranspiration Adjustment Factor For parks (SLAs) = 1.0 For non-residential landscape corridors = 0.45 For residential landscaping = 0.55 For water features = 1
LA	=	Total landscape area (including SLA)
SLA	=	Special Landscape Area

Based on the above methodology, and shown in **Table 2,** the total annual water demands for the Proposed Project's landscaping and water features are estimated to be 1.8 AFY and 0.11 AFY, respectively, at full buildout (excluding the distribution system losses discussed in Section 4.4).

4.4 Distribution System Losses

Water distribution systems experience a degree of water loss over the course of transmission from the source to the customer. Although distribution system losses from the newly constructed portion of the system's infrastructure associated with the Proposed Project would initially be expected to be minimal, it is conservatively assumed that distribution system losses associated with delivering water for the Proposed Project will ultimately be consistent with the proportion of real and apparent water loss per the most recent (2021) validated water loss audit submitted to DWR for the GSWC Culver City service area (i.e., 4.8%; DWR, 2021). It should be noted that while these real losses represent a demand on the system, water lost through the distribution system returns to the underlying groundwater basin and thus is not a true demand on the groundwater supply. However, for purposes of this WSA, all water loss is conservatively considered a demand. **Table 1** shows the distribution system losses for the Proposed Project, estimated at a total of 5.2 AFY at full buildout.

4.5 Existing Current Water Demand on the Proposed Project Site

The Proposed Project site is currently developed with several commercial and office buildings, with one building having been vacant for the past year (Hudson Pacific Properties, 2023b). From 2020 to 2023, water use at the Proposed Project site averaged 3.8 AFY, with a maximum annual use over this period of 5.6 AFY (Hudson Pacific Properties, 2023c).[4] Water demand for the new

[4] At the time of preparing this WSA, historical water usage data for the first four months of 2020 and the last month of 2023 were unavailable. For purposes of this analysis, the monthly average water use data from 2021 was used to approximate the water use for the first four months of 2020 in order to estimate the total annual water use at the site in 2020. The water use data for the last month in 2023 was not approximated in the average historical site use calculation as it was expected to be minimal.

development associated with the Proposed Project is conservatively assumed incremental to this existing demand, and thus, as shown in **Table 1**, the average existing site demand of 3.8 AFY is subtracted from the estimated demands associated with the Proposed Project.

4.6 Total Proposed Project Water Demand

Based on the above methodologies and assumptions, the total annual water demand associated with the Proposed Project at full buildout and occupancy is conservatively estimated to be 104 AFY, as shown in **Table 1**.

Table 1

Summary of Estimated Incremental Annual Project Water Demand

10950 Washington Boulevard, Culver City, California

Land Use	Land Use at Full Buildout (a)	Land Use Units	Water Demand Factor (b)	Water Demand Factor Units	Total Water Demand (AFY) (c)				
					2025	2030	2035	2040	2045
Residential Units (d)	508	du	173	gpd/du	0	99	99	99	99
Food Services (e)	14,087	sq ft	0.11	gpd/sq ft	0	1.8	1.8	1.8	1.8
Covered Parking (f)	269,421		0.020	gal/sq ft/cleaning	0	0.20	0.20	0.20	0.20
Community Pools and Spa	1,305		(g)		0	0.11	0.11	0.11	0.11
Irrigated Landscaping	39,980				0	1.8	1.8	1.8	1.8
Distribution System Losses	--	--	(h)		0	5.2	5.2	5.2	5.2
Existing Site Demand	--	--	(i)		0	-3.8	-3.8	-3.8	-3.8
Net Annual Water Demand (j)					**0**	**104**	**104**	**104**	**104**

Abbreviations:

"AFY" = acre-feet per year
"du" = dwelling unit
"gal" = gallons
"gpd" = gallons per day
"LACSD" = Los Angeles County Sanitation District
"MWELO" = Model Water Efficient Landscape Ordinance
"Proposed Project" = 10950 Washington Boulevard
"sq ft" = square feet
"WSA" = Water Supply Assessment

Notes:

(a) Estimated land use square footages for food services and residential units per Reference 1, for the covered parking and irrigated landscaping per Reference 2, and for the residential community pools and spas per Reference 3.

(b) Water demand factors for covered parking per Reference 4. Water demand factors for the residential units and food services were calculated based on wastewater generation factors per Reference 5. Wastewater generation factors per Reference 5 were provided by the LACSD and represent the average wastewater flow factor for each land use. For the purpose of this analysis, wastewater flows are assumed to be 90% of the total water demand for each land use consistent with the methodology used in the Paramount Pictures Master Plan, which was approved by the City of Los Angeles in April 2016 per Reference 6 and Reference 7. Therefore, flow factors provided in Reference 5 were divided by 0.9 to determine the water demand factors for residential unit and food service uses.

(c) The estimated completion date for the Proposed Project is 2030 per Reference 8.

(d) Residential units for the Proposed Project include 239 one bedroom apartments, 178 two bedroom apartments, and 91 studio apartments per Reference 1.

(e) "Food Services" include a grab and go market and coffee shop per Reference 8.

(f) Water use associated with the covered parking is anticipated to be minimal, limited to cleaning of the facility. For purposes of this WSA, it is assumed that the covered parking will be cleaned twelve times per year and that 0.02 gal/sq ft will be used per each cleaning event, per Reference 4.

Table 1

Summary of Estimated Incremental Annual Project Water Demand

10950 Washington Boulevard, Culver City, California

(g) Estimates of the landscape irrigation and community pool and spa water demands are based on MWELO calculations for Estimated Total Water Use per Reference 9. See Table 2 for the MWELO calculations.

(h) Estimated distribution system water loss associated with delivery of water to the Proposed Project is based on a rate of 4.8% per Reference 10 and includes both real and apparent losses.

(i) Existing site demands per Reference 11. Existing demands are subtracted from total projected water demands to show the incremental increase in demands associated with the Proposed Project (i.e., net increase in water demand). Existing demands are estimated as the average of the last four years of water use at the project site based on available metered data (2020-2023). At the time of preparing this WSA, historical water usage data for the first four months of 2020 and the last month of 2023 were unavailable. For purposes of this analysis, the monthly average water use data from 2021 was used to approximate the water use for the first four months of 2020 in order to estimate the total annual water use at the site in 2020. The water use data for the last month in 2023 was not approximated in the average historical site use calculation as it was expected to be minimal.

(j) Totals may not sum due to rounding.

5 GSWC CULVER CITY SERVICE AREA WATER DEMAND

☑ ***CWC § 10910 (c)***

(1) The city or county, at the time it makes the determination required under Section 21080.1 of the Public Resources Code, shall request each public water system identified pursuant to subdivision (b) to determine whether the projected water demand associated with a proposed project was included as part of the most recently adopted urban water management plan adopted pursuant to Part 2.6 (commencing with Section 10610).

(2) If the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f), and (g).

(3) If the projected water demand associated with the proposed project was not accounted for in the most recently adopted urban water management plan, or the public water system has no urban water management plan, the water supply assessment for the project shall include a discussion with regard to whether the public water system's total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses.

Consistent with the UWMP Act (CWC §10610-10656), the 2020 UWMP presents estimates of projected future water demand for the GSWC Culver City service area in five-year increments, between the years 2025 and 2045 (GSWC, 2021). Projected water demand is subdivided between the following seven customer sectors or use types: (1) single family, (2) multi-family, (3) commercial/institutional, (4) industrial, (5) landscape, (6) other, and (7) water loss. As discussed further below, the 2020 UWMP demand projections account for: (1) demands for the existing service area and accounts, (2) projected growth based on historical growth in accounts, and (3) all anticipated new development based on information then available to GSWC.

5.1 Current and Historical Water Demand Within the GSWC Culver City Service Area

Historical water demand within the GSWC Culver City service area from 2016 through 2022 is shown in **Table 3**. Based on 2020 water use, the single-family residential and commercial/institutional sectors use the most water, at 34% and 33%, respectively, followed by multi-family residential at 23%. Industrial and "other" uses represent just 2.4% and 2.9% of water use, and distribution system losses represent 5.3% of the service area's water demand (GSWC, 2021). Between 2016 and 2022, water demands remained fairly stable, averaging 4,819 AFY (DWR, 2024; GSWC, 2021).

5.2 GSWC Culver City Service Area Demand Projections

The 2020 UWMP water demand projections account for growth within the GSWC Culver City service area through 2045. The 2020 UWMP includes population growth estimates based on Southern California Association of Governments (SCAG) projections. Based on a review of historical growth in accounts and the SCAG projected population and employment, GSWC

projected the growth in accounts by sector within the Culver City service area and applied unit demand factors for each customer category to estimate future demands.

As shown in **Appendix B,** based on a review of the GSWC Culver City service area growth projections, GSWC has confirmed that the water demands associated with the Proposed Project's commercial and landscape uses and corresponding water distribution losses are within the anticipated growth for the GSWC Culver City service area. Thus, this WSA can assume that the demands for these project elements (approximately 4.0 AFY) were included in the 2020 UWMP for the GSWC Culver City service area, consistent with CWC §10910(c)(1) (GSWC, 2024).

However, per **Appendix B**, GSWC has confirmed the water demands associated with the Proposed Project's multi-family residential use and corresponding water distribution losses are not included in the growth anticipated within the GSWC Culver City service area. Thus, this WSA assumes that the demands for these project elements (approximately 100 AFY after subtracting the average existing site demand of 3.8 AFY) are additive to 2020 UWMP demands (GSWC, 2024).

The demand projections for the GSWC Culver City service area, including the Proposed Project's additive demands, are presented in **Table 4** by water use sector in five-year increments through 2045. It is estimated that, inclusive of the Proposed Project, the total annual water demand for the GSWC Culver City service area will be approximately 5,605 AFY in 2045.

5.3 Planned Development Projects Within the GSWC Culver City Service Area

As discussed above, the 2020 UWMP demand projections include projections of growth within the existing service area based on historical account growth and SCAG population and employment forecasts, which included the demand associated with the Crossings Campus Building 1 Project (Crossings Project), a planned development for which a WSA was completed in 2022. The Crossings Project includes a 167,000 sq ft four-story office building with associated landscaping and covered parking. The demands associated with the Crossings Project are estimated to be 24 AFY by full buildout in 2025. The Crossings Project is considered to be included within GSWC Culver City service area's growth projections and the 2020 UWMP demand projections (EKI, 2022).

Additionally, the 5757 Uplander Way mixed-use residential development is a known project within the GSWC Culer City service area for which a WSA is currently being prepared. The 8.3 acre-site would include the construction of 1,077 multi-family units, just under 9,000 sq ft of lobby space, approximately 6,000 sq ft of fitness center space, and an approximately 5,000 sq ft restaurant (EKI, 2024). The draft WSA determined that the demands associated with the commercial and landscaping uses, approximately 11 AFY by full buildout, are included in the 2020 UWMP demand projections. However, the draft WSA determined that the estimated demands associated with the multi-family residential uses are not included in the 2020 UWMP demand projections for GSWC Culver City (135 AFY). Therefore, the preliminary projected multi-family residential demands that are considered additive to GSWC Culver City's projected demands are shown in **Table 4**.

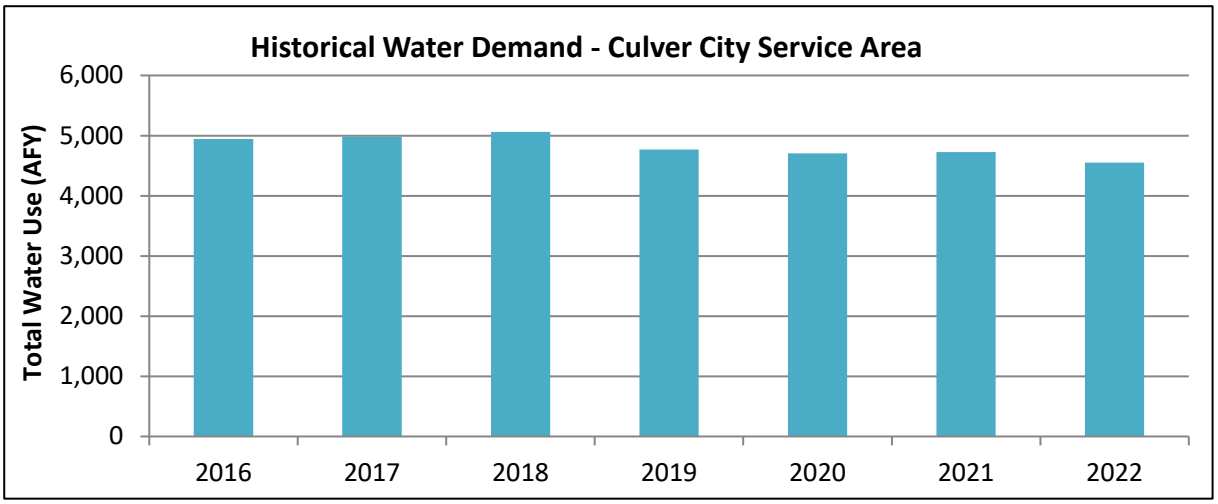
This WSA understands that GSWC tracks future planned water uses through service applications that it receives for new developments and has determined that all currently planned water uses, except for the multi-family residential demands and corresponding water losses associated with the 5757 Uplander Way development and the Proposed Project, are accounted for in its 2020 UWMP.

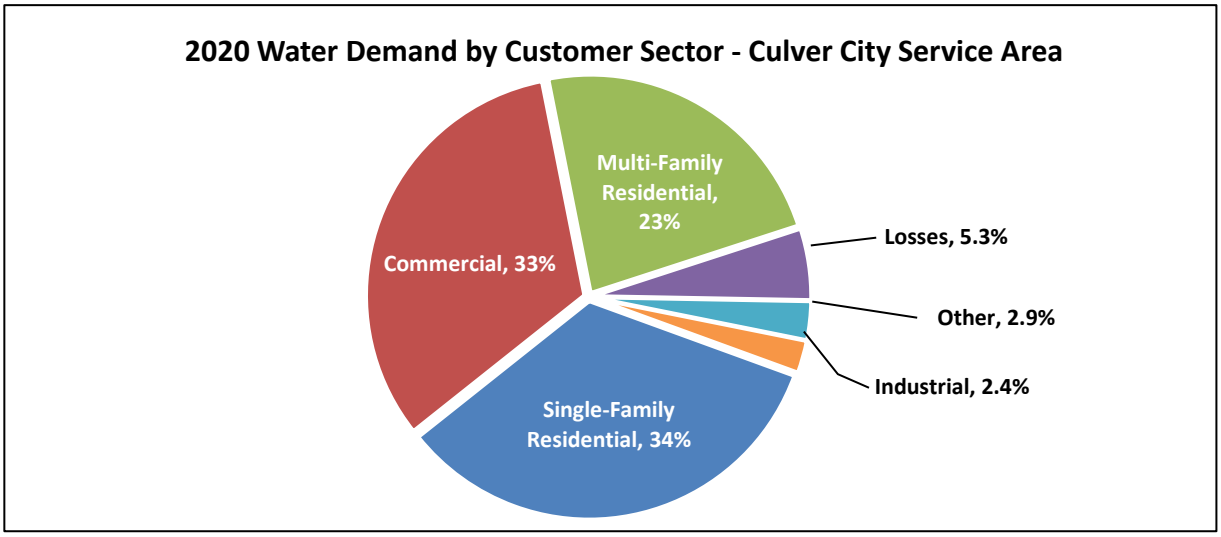
Table 3

Historical Water Demand for GSWC Culver City Service Area

10950 Washington Boulevard, Culver City, California

	Historical Water Demand (AFY) (a)						
	2016	**2017**	**2018**	**2019**	**2020**	**2021**	**2022**
Water Demand	4,942	4,982	5,061	4,767	4,707	4,726	4,551





Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

Notes:

(a) Historical water demands from 2016-2020 per Reference 1, and for 2021 and 2022 per Reference 2. The 2020 water use by customer sector was provided in Reference 1.

Losses (e)	0	4.9	4.9	4.9	4.9
Existing Site Demand	0	-3.8	-3.8	-3.8	-3.8
Total Proposed Project Additive Demand	**0**	**100**	**100**	**100**	**100**
Total GSWC Culver City Service Area Water Demand Inclusive of the Proposed Project	**5,002**	**5,288**	**5,410**	**5,504**	**5,605**

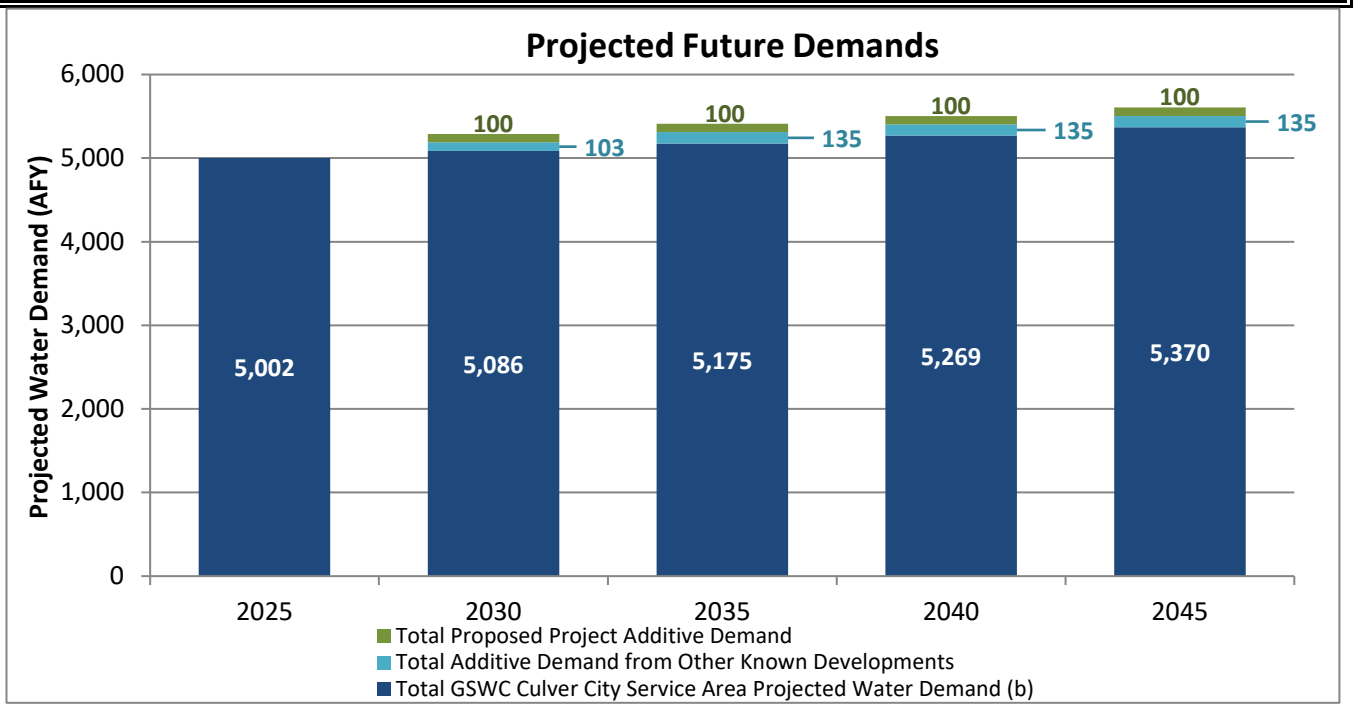

Table 4

Projected Future Water Demand for GSWC Culver City Service Area

10950 Washington Boulevard, Culver City, California

Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

"UWMP" = Urban Water Management Plan

"Proposed Project" = 10950 Washington Boulevard

Notes:

(a) The projected water demands by sector for the GSWC Culver City Service Area are provided in the 2020 UWMP per Reference 1.

(b) Total may not sum due to rounding.

(c) Another known development is the 5757 Uplander Way Project. The demands associated with the 5757 Uplander Way Project mixed-use residential development per Reference 2 are preliminary and are currently in the process of being updated. A portion of the total project's draft projected demands (shown in the table above) are considered additive to GSWC's growth.

(d) Commercial and landscape demands for the Proposed Project, as well as the corresponding water losses, are within the growth anticipated by GSWC and therefore, are included in the GSWC Culver City Service Area 2020 UWMP. However, the Proposed Project's multi-family residential demands and the corresponding water losses were not included within the projected growth in the 2020 UWMP. Therefore, these demands are additive to those in the 2020 UWMP, as confirmed through correspondence with GSWC per Reference 3.

(e) Distribution losses associated with the Proposed Project's multi-family residential demands are proportional to the Proposed Project's total distribution system losses in Table 1.

2. EKI, 2024. Draft Water Supply Assessment for the 5757 Uplander Way Project, prepared by EKI for Golden State Water Company, dated July 2024.
3. GSWC, 2024. Information provided by Golden State Water Company on 5 August 2024.

6 GSWC CULVER CITY SERVICE AREA WATER SUPPLY

This section identifies the water supplies for the GSWC Culver City service area and discusses the variability of the different supplies based on drought and other factors affecting water supply reliability. The Proposed Project will be served potable water by GSWC, which primarily relies on imported water purchased from the West Basin Municipal Water District (WBMWD), although GSWC has previously extracted a minimal amount of groundwater from the Santa Monica Subbasin (GSWC, 2021).

6.1 Identification of Water Supply Rights

☑ ***CWC § 10910 (d)(1)***

The assessment required by this section shall include an identification of any existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and a description of the quantities of water received in prior years by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), under the existing water supply entitlements, water rights, or water service contracts.

Pursuant to CWC §10910(d)(1), a WSA is required to include identification of all water supply entitlements, water rights, and water service contracts relevant to the identified water supply for the Proposed Project. In accordance with these requirements, this WSA includes a summary of GSWC's water supply sources for the GSWC Culver City service area.

6.2 Purchased Water

GSWC purchases water for the GSWC Culver City service area from WBMWD. The water purchased from WBMWD may be managed and moved between the GSWC Culver City service area and GSWC Southwest service area, depending upon the circumstances for supply availability in each particular service area (GSWC, 2021).

GSWC entered into a five-year purchase order agreement between GSWC and WBMWD, effective 1 January 2008 through 31 December 2012. The agreement was extended an additional two years to 31 December 2014. This agreement provided GSWC with an annual maximum allocation of 30,651 AFY with a total purchase commitment of 91,953 AF over the five-year term of the agreement, shared by all of GSWC's systems served by WBMWD. At this time, this agreement has not been extended (WBMWD, 2024).

WBMWD is a member agency of the Metropolitan Water District of Southern California (MWD). WBMWD acts as secondary wholesale water agency, purchasing water from MWD and reselling it to GSWC. WBMWD entered into a new ten-year term purchased order with MWD effective 1 January 2015 through 31 December 2024 (WBMWD, 2021). At this time, no new purchase order agreement has been made between WBMWD and MWD past 31 December 2024 (WBMWD, 2024).

MWD supplies imported water sourced from the State Water Project (SWP) and the Colorado River via a series of pipelines and aqueducts. The Colorado River was MWD's original source of water following its establishment in 1928. MWD has a legal entitlement to receive water from the Colorado River under a permanent service contract with the United States Secretary of the Interior. The Colorado River Aqueduct, which has a capacity of 1.25 million AFY, is owned and operated by MWD. It transports water from Lake Havasu, at the border of California and Arizona, approximately 242 miles west to its terminus at Lake Mathews in Riverside County and MWD's service area (WBMWD, 2021).

MWD also imports water from the SWP, which is owned by the State of California and operated by DWR. The SWP transports Feather River water stored in and released from Oroville Dam and conveyed through the San Francisco Bay and Sacramento-San Joaquin River Delta (Bay-Delta), as well as unregulated flows diverted directly from the Bay-Delta, south via the California Aqueduct to four delivery points: one from the California Aqueduct's West Branch at Castaic Lake and three from the East Branch along the northeastern portion of MWD's service area between Devil's Canyon Power Plant and Lake Perris (WBMWD, 2021).

MWD continuously engages in planning for various aspects of its water management, including operations, long-term reliability, and emergency response. These planning efforts include: (1) the 1996 Integrated Water Resources Plan (IRP) and its three updates in 2004, 2010, and 2015; (2) the 2020 IRP (currently in development); (3) the Water Shortage Contingency Plan (WSCP); (4) the Water Surplus and Drought Management (WSDM) Plan; (5) the Water Supply Allocation Plan (WSAP); (6) the Emergency Storage Objective; and (7) the Seismic Risk Assessment and Mitigation Plan. Collectively, they provide a policy framework, operating guidelines, and resource targets for MWD to ensure regional water supply reliability (MWD, 2022; WBMWD, 2021).

The IRP is MWD's evolving long-term plan to assure adequate water supplies for Southern California. The first IRP was adopted in 1996 to address the complexity of developing, maintaining, and delivering water to meet changing demands in the face of growing challenges. This version of the IRP was last updated in 2015 and detailed a series of reliability goals, approaches, and targets for each of their water resource areas, with some focus on maintaining existing capabilities and increasing net quantities over the 25-year planning horizon (MWD, 2016). The 2015 IRP identified the following goals:

- Maintain Colorado River Aqueduct supplies;
- Stabilize State Water Project supplies;
- Achieve additional conservation savings; and
- Develop and protect local water supplies.

MWD published annual implementation reports on its progress towards the 2015 IRP goals. The most recent Implementation Report (2019) highlighted the progress on achieving the resource and reliability goals established in the 2015 IRP as follows:

- MWD worked closely with other agencies to improve the reliability of its imported water supplies. MWD led efforts in crafting the Lower Colorado River Basin Drought Contingency Plan and supported efforts to make the Delta more resilient and support Governor Newsom's direction to advance a single tunnel solution in the Delta.
- MWD continued to support and encourage local supply development through the Local Resources Program. MWD's board approved three projects with a total contract yield of 3,660 AFY from January 2019 to October 2019. As of October 2019, seven additional applications for a total of 116,580 AFY were under consideration. MWD was also assessing the water supply benefits from stormwater through pilot programs.
- MWD continued to inform residents of water use efficiency through its ongoing advertising campaigns and education. In addition to rebates for water efficient fixtures, MWD also implemented programs targeting outdoor conservation with its landscape education and turf replacement programs. In 2019, MWD's Board of Directors (Board) approved a conservation initiative that focuses on reaching disadvantaged communities (MWD, 2019).

In 2020, MWD initiated a new IRP process with a fresh approach, looking at multiple scenarios that could play out in the future and how MWD could respond to maintain water reliability for the region. The 2020 IRP is a two-phase process including a Regional Needs Assessment (Phase 1) and a One Water Implementation phase (Phase 2). The Regional Needs Assessment was completed and adopted by the MWD Board in April 2022, and includes the analysis of regional needs under a range of scenarios: (1) Scenario A, low demand and stable imports; (2) Scenario B, high demand and stable imports; (3) Scenario C, low demand and reduced imports; and (4) Scenario D, high demand and reduced imports (MWD, 2022). The Regional Needs Assessment found plausible reliability outcomes by the year 2045, with potential shortages ranging from no net shortage at all under Scenario A to as high as 1.2 million AF under Scenario D, and identifies needs and opportunities related to five focus areas: (1) SWP dependent areas; (2) storage; (3) retail demand/ demand management; (4) MWD imported supplies; and (5) local supply. The Regional Needs Assessment concludes that:

> *Collectively, these findings instill a sense of optimism about Southern California's water future. Metropolitan has identified the tools necessary to adapt to a variety of plausible futures successfully. It is also well within Southern California's control to avoid a fate with increased per-capita water use and higher demands that would prove unsustainable.*

The Regional Needs Assessment further notes that through the One Water Phase of the process:

> *The precise combination of actions will emerge as more is known about the future that we actually face. Southern California is poised to be agile enough to adjust its portfolio of water actions to keep up with our changing times.*

Completion of Phase 1 launched the beginning of the One Water Implementation (Phase 2). This phase, which is ongoing, involves collaboration between MWD's Board, member agencies, and interested parties to establish a joint process for monitoring key reliability indicators, develop a coordinated approach to regional problems and resource needs identified in Phase 1, and create an adaptive management strategy (MWD, 2022).

While MWD coordinates regional supply planning through its inclusive IRP process, MWD's member agencies also conduct their own planning analyses, including their own urban water management plans, and may develop projects independently of MWD (MWD, 2022; WBMWD, 2021).

6.3 Groundwater Supply

☑ ***CWC § 10910 (f)***

If a water supply for a proposed project includes groundwater, the following additional information shall be included in the water supply assessment:

(1) A review of any information contained in the urban water management plan relevant to the identified water supply for the proposed project.

(2)(A) A description of any groundwater basin or basins from which the proposed project will be supplied.

(B) For those basins for which a court or the board has adjudicated the rights to pump groundwater, a copy of the order or decree adopted by the court or the board and a description of the amount of groundwater the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has the legal right to pump under the order or decree.

(C) For a basin that has not been adjudicated that is a basin designated as high- or medium-priority pursuant to Section 10722.4, information regarding the following:

(i) Whether the department has identified the basin as being subject to critical conditions of overdraft pursuant to Section 12924.

(ii) If a groundwater sustainability agency has adopted a groundwater sustainability plan or has an approved alternative, a copy of that alternative or plan.

(D) For a basin that has not been adjudicated that is a basin designated as low- or very low priority pursuant to Section 10722.4, information as to whether the department has identified the basin or basins as overdrafted or has projected that the basin will become overdrafted if present management conditions continue, in the most current bulletin of the department that characterizes the condition of the groundwater basin, and a detailed description by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), of the efforts being undertaken in the basin or basins to eliminate the long-term overdraft condition.

(3) A detailed description and analysis of the amount and location of groundwater pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), for the past five years from any groundwater basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(4) A detailed description and analysis of the amount and location of groundwater that is projected to be pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), from any basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(5) An analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project. A water supply assessment shall not be required to include the information required by this paragraph if the public water system determines, as part of the review required by paragraph (1), that the sufficiency of groundwater necessary to meet the initial and projected water demand associated with the project was addressed in the description and analysis required by paragraph (4) of subdivision (b) of Section 10631.

As shown in **Figure 3**, the majority of the GSWC Culver City service area overlies the Santa Monica Subbasin of the Los Angeles Basin (DWR Basin No. 4-011.01; referred to as "Santa Monica Subbasin" or "Subbasin").[5]

In 2020, 0.1 AF of groundwater pumped from the Santa Monica Subbasin was used by the GSWC Culver City service area (**Table 5**). However, GSWC does not anticipate using groundwater to meet demands for the Proposed Project or the rest of its GSWC Culver City service area within the 2045 planning horizon (GSWC, 2021; GSWC, 2022a). Per the 2020 UWMP, while the GSWC Culver City service area has not relied upon groundwater to serve its customers over the last few years, GSWC maintains a well and may institute potential service from the Subbasin in the future upon completion of the Santa Monica Groundwater Subbasin GSP and implementing actions. Although groundwater is not currently anticipated to supply the Proposed Project, details regarding the Subbasin pursuant to CWC §10910(f) are provided below given the possibility that groundwater could be utilized in the future.

6.3.1 Basin Description

The following is a description of the groundwater basin from which the Proposed Project could be supplied, if GSWC uses its well in the future. The discussion is based on review of relevant information contained within the GSWC Culver City service area 2020 UWMP and the Santa Monica Groundwater Subbasin GSP (GSWC, 2021; SMBGSA, 2022).

The Santa Monica Subbasin comprises the northwestern part of the Coastal Plain of Los Angeles Groundwater Basin. It is bounded by impermeable rocks of the Santa Monica Mountains on the north and by the Ballona escarpment on the south. The Subbasin extends from the Pacific Ocean on the west to the Inglewood fault on the east. Ballona Creek is the dominant hydrologic feature and drains surface waters to the Pacific Ocean. The Subbasin is bounded to the south by the West Coast Subbasin and to the east by the Hollywood and Central Subbasins.

Holocene age alluvium forms much of the surficial deposits for the central part of the Subbasin and fills the Ballona gap, an erosional channel cutting into and across the Inglewood fault. These deposits include the clay-rich Bellflower aquiclude and underlying gravels of the Ballona aquifer. Late Pleistocene alluvial sediments form much of the elevated plateau areas in the Subbasin and include older dune sands and the Lakewood Formation. The Lakewood Formation includes thin coarse-grained laterally discontinuous units in the Subbasin, not contiguous with the named aquifers of the Lakewood Formation elsewhere in the Los Angeles Basin. In general, groundwater supply wells are not screened within the Lakewood Formation. The Silverado aquifer within the early Pleistocene age San Pedro Formation is the main productive unit in the Subbasin in which the majority of the groundwater production wells in the basin are screened. Water bearing units

[5] Small portions of the GWSC Culver City service area also overly the Central and West Coast Subbasins (DWR 4-011.04 and DWR 4-011.03, respectively). However, GSWC's Culver City service area well is located within the Santa Monica Subbasin.

below the San Pedro Formation include the Pliocene marine sediments of the Pico Formation, which are not widely produced.

The primary source of recharge to the Silverado aquifer (the primary productive unit within the Subbasin) is mountain front recharge from the Santa Monica Mountains to the north the Subbasin. The Subbasin is highly urbanized and little recharge occurs via direct infiltration of precipitation in the Subbasin boundaries.

Primary sources of groundwater discharge from the Santa Monica Subbasin include groundwater production wells. Groundwater in the Santa Monica Subbasin moves mainly southward toward the Ballona gap, then flows toward to the ocean. Under normal water level conditions, underflows are expected from the Santa Monica Subbasin to the West Coast Subbasin in the south. Relatively minor amounts of underflows are expected across the eastern boundary with the Hollywood and Central Subbasins or the western boundary with the ocean.

6.3.2 Basin Status

Pursuant to CWC §10910f(2)(C), the Santa Monica Subbasin is not adjudicated and, in its recent evaluation of California groundwater basins, DWR determined that the Santa Monica Subbasin was not in a condition of critical overdraft (DWR, 2022).

The Santa Monica Subbasin is, however, designated as a medium priority basin under DWR's 2019 Phase 2 Basin Prioritization (DWR, 2019). The main factors driving this designation include Population (5 out of 5 possible points), Population Growth (3 out of 5 possible points), and Total Wells (3 out of 5 possible points). Additional factors include Groundwater Reliance (2.5 out of 5 possible points), Public Supply Wells (2 out of 5 possible points), and Impacts (2 out of 5 possible points) (DWR, 2022).

As discussed in the Santa Monica Groundwater Subbasin GSP, a very small portion on the southern coastal edge of the Santa Monica Subbasin overlaps the adjudicated area of the West Coast Subbasin (DWR 4-011.03). GSWC's groundwater well is located outside of this area, and thus the adjudication does not impact potential groundwater use by the GSWC Culver City service area. Additional information on this adjudicated area is provided in the Santa Monica Groundwater Subbasin GSP (SMBGSA, 2022).

6.3.3 SGMA Groundwater Management

In 2014, the California State Legislature enacted the Sustainable Groundwater Management Act (SGMA) with subsequent amendments in 2015. SGMA requires the formation of Groundwater Sustainability Agencies (GSAs) and the development and implementation of GSPs for groundwater basins that are designated by DWR as medium or high priority. As a medium priority, non-critically overdrafted and non-adjudicated basin (see previous discussion), the Subbasin is subject to the requirements of SGMA, including the requirement to be covered by one or more GSAs and to prepare and submit to DWR one or more GSPs by 31 January 2022.

Per the Santa Monica Groundwater Subbasin GSP, the Santa Monica Basin Groundwater Sustainability Agency (SMBGSA) was formed in 2017. The five member agencies of the SMBGSA include the City of Santa Monica, the City of Beverly Hills, the City of Los Angeles (by and through its Department of Water and Power), the City of Culver City, and the County of Los Angeles. The five member agencies signed a Memorandum of Understanding for the formation of the SMBGSA in May 2017.

The Santa Monica Groundwater Subbasin GSP was submitted to DWR in 2022 and approved on 26 October 2023. DWR has recommended Corrective Actions to be addressed in the 2027 five-year GSP update. The GSP and DWR's Determination Letter can be found on the DWR SGMA Portal: https://sgma.water.ca.gov/portal/gsp/preview/129. This GSP and subsequent updates will govern groundwater use within the Subbasin going forward.

6.4 Recycled Water

Recycled water is not currently served to customers within the GSWC Culver City service area and is not expected to supply the Proposed Project. It is noted, however, that wastewater generated within the service area is treated by the City of Los Angeles, and a portion of that treated wastewater is sold to WBMWD for further treatment for recycled water uses throughout the WBMWD service area (GSWC, 2021). Although the GSWC Culver City service area does not directly utilize recycled water, its customers contribute to the regional water supply reliability benefit achieved through WBMWD's distribution of recycled water.

6.5 Total Projected Potable Supply in Normal, Single Dry, and Multiple Dry Years

As discussed above, water purchased from WBMWD constitutes the primary source of supply for the GSWC Culver City service area historically and is expected to be the sole source of supply within the 2045 planning horizon (GSWC, 2021). The WBMWD 2020 UWMP states that it will be able to serve 100% of projected demands in normal, single-dry and multiple-dry years (WBMWD, 2021). Because of this, GSWC expects that under all hydrologic conditions purchased water supplies will fully meet future purchased water demands included in the GSWC 2020 UWMP. Additionally, GSWC has confirmed that is has the ability to purchase additional water from WBMWD to meet the additive demands of the Proposed Project associated with the multi-family residential use and corresponding distributional water loss (GSWC, 2024).

Therefore, the available supplies to the GSWC Culver City service area are considered to be equal to GSWC 2020 UWMP demands plus the additive demands of the Proposed Project under all conditions (i.e., current and projected, and for normal, single dry, and multiple dry years including a five-year drought period).

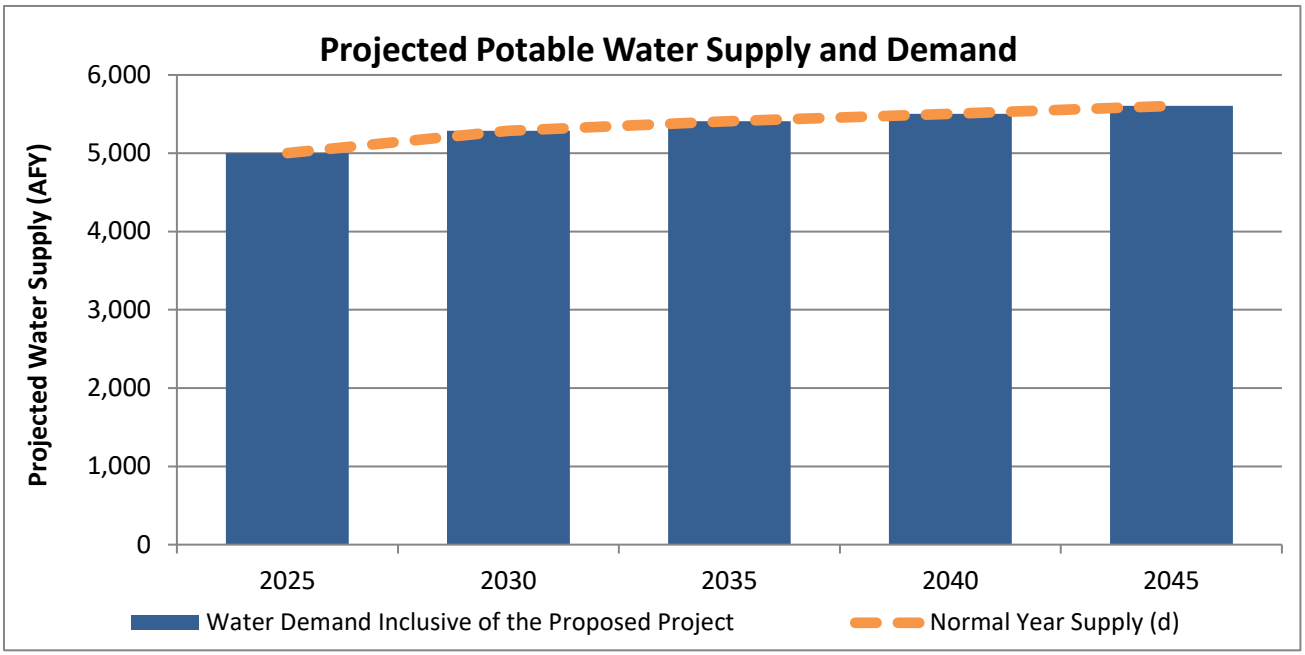
The total projected potable supplies for the GSWC Culver City service area for normal, single dry, and multiple dry years are presented in **Tables 6**, **7**, and **8**.

Table 6

Projected Normal Year Water Supply and Demand for GSWC Culver City Service Area

10950 Washington Boulevard, Culver City, California

Water Demand and Supply	Projected Normal Year Supply and Demand (AFY)				
	2025	2030	2035	2040	2045
Water Demand Inclusive of the Proposed Project	5,002	5,288	5,410	5,504	5,605
GSWC Culver City Service Area Normal Year Demand (a)	5,002	5,086	5,175	5,269	5,370
Other Known Developments' Additive Demand (b)	0	103	135	135	135
Proposed Project Additive Demand (c)	0	100	100	100	100
Normal Year Supply (d)	5,002	5,288	5,410	5,504	5,605
Supply Shortfall (% demand)	***None***	***None***	***None***	***None***	***None***



Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

"Proposed Project" = 10950 Washington Boulevard

"UWMP" = Urban Water Management Plan

"WBMWD" = West Basin Municipal Water District

"WSA" = Water Supply Assessment

Notes:

(a) The projected normal year water demands for the GSWC Culver City Service Area are provided per Reference 1.

(b) Additive demands associated with other known developments in the GSWC Culver City Service Area include the draft demands associated with the 5757 Uplander Way Project, per Reference 2.

(c) As discussed in Section 5 of this WSA and as shown in Table 4, the demands associated with the Proposed Project's multi-family residential use and corresponding distributional losses are not included within the GSWC Culver City Service Area's 2020 UWMP projections.

(d) Per Reference 2 and Reference 3, GSWC confirmed ability to purchase water from WBMWD as needed to meet demands. As such, the normal year supplies available to GSWC are equal to the projected demands in the 2020 UWMP plus the additive demands of the Proposed Project and the draft additive demands of the 5757 Uplander Way Project.

Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

"Proposed Project" = 10950 Washington Boulevard

"UWMP" = Urban Water Management Plan

"WBMWD" = West Basin Municipal Water District

"WSA" = Water Supply Assessment

Notes:

(a) While WSA regulations only require an analysis of a three-year drought scenario, UWMP regulations were updated in 2018 to include a five-year drought scenario (California Water Code §10635), Therefore, a five-year drought scenario is presented here.

(b) The projected multiple dry year water demands for the GSWC Culver City Service Area are provided per Reference 1.

(c) Demands associated with other known developments in the GSWC Culver City Service Area include the draft demands associated with the 5757 Uplander Way Project, per Reference 2.

(d) As discussed in Section 5 of this WSA and as shown in Table 4, the demands associated with the Proposed Project's multi-family residential use and corresponding distributional losses are not included within the GSWC Culver City Service Area's 2020 UWMP projections.

(e) Per Reference 2 and Reference 3, GSWC confirmed ability to purchase water from WBMWD as needed to meet demands. As such, the multiple dry year supplies available to GSWC are equal to the projected demands in the 2020 UWMP plus the additive demands of the Proposed Project and the draft additive demands of the 5757 Uplander Way Project.

7 COMPARISON OF SUPPLY AND DEMAND

☑ ***CWC § 10910 (c)(3)***

If the projected water demand associated with the proposed project was not accounted for in the most recently adopted urban water management plan, or the public water system has no urban water management plan, the water supply assessment for the project shall include a discussion with regard to whether the public water system's total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses.

☑ ***CWC § 10911 (a)***

If, as a result of its assessment, the public water system concludes that its water supplies are, or will be, insufficient, the public water system shall provide to the city or county its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies. If the city or county, if either is required to comply with this part pursuant to subdivision (b), concludes as a result of its assessment, that water supplies are, or will be, insufficient, the city or county shall include in its water supply assessment its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies. Those plans may include, but are not limited to, information concerning all of the following:

(1) The estimated total costs, and the proposed method of financing the costs, associated with acquiring the additional water supplies.

(2) All federal, state, and local permits, approvals, or entitlements that are anticipated to be required in order to acquire and develop the additional water supplies.

(3) Based on the considerations set forth in paragraphs (1) and (2), the estimated timeframes within which the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), expects to be able to acquire additional water supplies.

☑ ***CWC § 10911 (c)***

The city or county may include in any environmental document an evaluation of any information included in that environmental document provided pursuant to subdivision (b). The city or county shall determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the project, in addition to existing and planned future uses. If the city or county determines that water supplies will not be sufficient, the city or county shall include that determination in its findings for the project.

Pursuant to CWC §10910(c)(3), this WSA includes an estimate of the projected water supplies available to GSWC Culver City service area under normal, single dry, and multiple dry years, based on the 2020 UWMP, and a discussion of whether those supplies will meet the projected demand associated with the Proposed Project as well as the water system's existing and planned future uses. This assessment is parallel to the multiple-dry year supply reliability analysis required for UWMPs under CWC §10635. In 2018, CWC §10635 was revised to require UWMPs to extend this analysis to consider "a drought lasting five consecutive water years." Although the parallel WSA requirement (i.e., CWC §10910(c)(3)) has not been updated to require this for WSAs, a five-year drought scenario is also evaluated herein.

Tables 6, **7**, and **8** provide a comparison of the demands and supplies, inclusive of the Proposed Project and other known developments, in normal year, single-dry year, and multiple-dry year hydrologic scenarios for the GSWC Culver City service area. As discussed above, the available supplies to the GSWC Culver City service area are considered to be equal to GSWC Culver City service area 2020 UWMP demands plus the additive demands of other known developments and the Proposed Project under all conditions (i.e., current and projected, and for normal, single dry, and multiple dry years).

While supply shortfalls are not projected, any shortfalls that could occur in the future would be managed through the implementation of GSWC Culver City service area's WSCP. The overall reduction goals in the WSCP are established for six drought stages ranging from 10% to greater than 50% shortfalls.

During the historic 2013-2017 drought, the GSWC Culver City service area was subject to the State Water Resources Control Board's (SWRCB's) mandatory water reduction target at 16% between June 2015 and May 2016,[6] and met its target through implementation of its WSCP and reducing its water demand 17% relative to its water use in 2013 (SWRCB, 2016). On 8 July 2021, in response to the recent drought conditions, Governor Newsom signed Executive Order (EO) N-10-21 calling Californians to voluntarily reduce water use by 15% compared to 2020 levels. On 28 March 2022, following the driest first three months of a year in the state's recorded history, Governor Newsom signed EO N-7-22 calling on local water suppliers to move to Stage 2 of their WSCP. GSWC enacted Stage 2 of its WSCP for the GSWC Culver City service area on 27 June 2022 and implemented numerous drought response actions, including, but not limited to, outdoor watering day restrictions and drought emergency surcharges for usage in excess of customer baseline (GSWC, 2021; GSWC, 2022b). As a result of recent dramatic rainfall in 2023, GSWC moved the GSWC Culver City service area from Stage 2 to Stage 1 effective 14 May 2023 (GSWC, 2023). As a customer within the GSWC Culver City service area, the Proposed Project would be obligated to comply with any demand reduction efforts imposed by GSWC through implementation of the WSCP in any future water shortage conditions. Therefore, the Proposed Project would contribute a proportionate share of the reduction in water demands during dry years or other water shortage condition.

In 2016, Governor Brown signed EO B-37-16 *Making Water Conservation a California Way of Life* and subsequently SB 606 and AB 1668 were passed. SB 606/AB 1688 set new requirements for urban water agencies to continue to increase water efficiency beyond the 2020 water use targets developed under the Water Conservation Act of 2009 (SB X7-7). Beginning in 2024, agencies are required to report on "urban water use objective" (UWUO), which is based on an aggregate

[6] On 5 May 2015, the SWRCB adopted Resolution 2015-0032 that mandates minimum actions by water suppliers and their customers to conserve water supplies into 2016 and assigned a mandatory water conservation goal to each water supplier based on their residential gallons per capita per day (R-GPCD). The Resolution was adopted pursuant to Executive Order B-29-15 that directed SWRCB to impose mandatory restrictions on urban water suppliers to achieve a statewide 25% reduction in potable urban water usage to address California's severe drought conditions.

estimate of efficient urban water use for the previous year based on local service area characteristics for that year and the adopted water use efficiency standards for the previous year (DWR, 2023). Additionally, agencies can adjust their UWUO's by adding an allowable potable reuse bonus incentive under CWC §10609.20(d). Through comparing UWUOs from the previous to the current year, agencies are expected to be better equipped to eliminate unnecessary uses of water, resulting in continued increases in efficiency for all urban water suppliers in the State.

In addition, SB 606/AB 1668 added new requirements related to drought planning and WSCPs, including requirements for agencies to: (1) conduct a drought risk assessments part of their future UWMPs to assess water supply reliability (or vulnerability) for a period of drought lasting five consecutive water years (CWC §10635(b)), and (2) conduct annual water supply and demand assessments to determine its water supply reliability for the current year and one dry year (CWC §10632(a)). These elements are included in the GSWC Culver City service area 2020 WSCP (i.e., Chapter 6 of the 2020 UWMP).

Therefore, given that: (1) the projections inclusive of the Proposed Project do not identify supply shortfalls under any hydrologic conditions evaluated; (2) GSWC has the ability to implement the WSCP in the case of supply shortages, and demonstrated its effectiveness during recent droughts; and (3) the recent increasing efficiency and drought planning requirements from the State, sufficient water supply is estimated to be available to GSWC to meet all future demands within the GSWC Culver City service area including those associated with the Proposed Project.

8 CONCLUSIONS

As listed in CWC §10910(c)(4), the primary purpose of this WSA is to evaluate whether sufficient water supply is available to meet all future water demands within the water supplier's service area, including those associated with the Proposed Project, during normal, single, and multiple dry hydrologic years for a 20-year time horizon.

As described in Section 4, the water demand of the Proposed Project (i.e., estimated at 104 AFY at buildout) has been conservatively estimated. As discussed in Section 5, the Proposed Project's commercial and landscaping demands, and associated water distribution losses, are within the projected water demand growth that form the basis of GSWC's demand projections in the adopted GSWC Culver City 2020 UWMP, while the multi-family residential and corresponding distributional loss demands are additive to the 2020 UWMP projections. GSWC has confirmed that it is able to purchase 100% reliable water supply from WBMWD to meet these additive demands of the Proposed Project. In addition, GSWC, due to new requirements by the State, is currently required to continue to increase water efficiency in its service area into the future. GSWC has demonstrated effectiveness in reducing demand during recent water shortage conditions through implementation of its WSCP and would be expected to rely on its WSCP to meet any potential water shortages or regulatory-required cutbacks.

Therefore, this WSA concludes that sufficient water supply is available to GSWC to meet all future demands within the GSWC Culver City service area, including those associated with the Proposed Project.

Abbreviations:

"AFY" = acre feet per year

"GSWC" = Golden State Water Company

"Proposed Project" = 10950 Washington Boulevard

"UWMP" = Urban Water Management Plan

Notes:

(a) Values in black indicate cumulative anticipated sector growth (i.e., number of service connections) included in the GSWC - Culver City 2020 UWMP (Reference 1). Values in blue indicate the anticipated incremental growth in service connections between each five-year period included in the 2020 UWMP for each sector. Values in purple and orange indicate the number of service connections associated with other known developments in the GSWC Culver City service area from publicly available WSAs (in this case, the Culver Crossings Campus Building 1 and 5757 Uplander Way Projects, respectively). Values in green indicate the incremental growth in service connections associated with the Proposed Project. It should be noted that Proposed Project demands, along with the demands of the Culver Crossings Campus Building 1 and 5757 Uplander Way Projects, were converted from acre-feet per year (AFY) to number of service connections for comparison purposes using the conversion factors provided in the 2020 UWMP.

(b) The draft 5757 Uplander Way Project demands are provided per Reference 2. It is important to note that the demands associated with this project are currently in the process of being updated to reflect changes to the project description and County of LA demand factors. As such, the projected accounts associated with this project's multi-family residential, commercial, and landscaping uses are subject to change.

(c) The number of service connections for the Proposed Project associated with the multi-family residential use (green) is greater than the anticipated growth indicated in the 2020 UWMP for the multi-family residential sector (blue). Because of this, it can be assumed that these demands are not included in the 2020 UWMP and are, therefore, additive to the demands of the 2020 UWMP.

(d) The Culver Crossings Campus Building 1 Project demands are provided per Reference 3.

(e) The number of service connections for the Proposed Project associated with the commercial use (green) is less than the anticipated growth indicated in the 2020 UWMP for the commercial sector (blue). Because of this, it can be assumed that these demands are included in the 2020 UWMP.
